Henry and Bob:

Didn't get the gravel scraped off until 6:45 tonight, so you will have to set stakes in area to be dug. The two base lines, already in, should make it easy (except that the open end reel has 1 cm cut off end, and is hard to read!). Points on sidewalk are small holes chipped in concrete in center of white patches.

Small tools are in pile in center of shed (things around edges and lumber under pile not mine). Be careful of Rush's new paint job as I am using shed without his permission – he will be back Sunday. Only the large wheel barrel is ours. Screens and stakes under black plastic on parking lot.

I suggest taking out alternate 2-M squares as shown on map (next sheet).

Each 1-M sq. could be worked separately within each 2 M sq. In any case, to be consistent with the scale used last spring, only one 1-M sq. should be drawn on the graph on the sq. sheets. If there is nothing to draw, one sheet will do for a 2-M sq.

As much as I would like to, we probable will not be able to screen much of the plow zone although several inches of it

has been already removed (before gravel was brought in). (I plan to work 4-5 men for 3-4 weeks; we may be able to talk them into letting us dig in front of the house, too.)

Undisturbed sheet midden (may be difficult to distinguish from plow zone) and pits are to be screened, of course. The sept fea. # is 49. See list attached.

Keep backdirt on gravel lot.

Some forms in this notebook, others in blue ring binder.

I did not want to rush leaving cameras and transit; hope you don't need them.

Good luck.

I will be back Sunday morning, before 10 A.M. if possible.

Tyler

Percolation tests

22 Nov 72

Forest composition

Gene Friend

Original forest was oak-chestnut

Now mostly maple, hickory, and a little oak.

Chestnut all killed by blight

Pine native ~~in~~ swamps near Oakland ~~[illegible]~~

All pine around ~~[illegible]~~ Friendsville was planted.
