Mill Race

North

F9

NOT TO SCALE

These 2 faces are on-line with one another.

Still way to River (E-12)

Little Potomac River
A possible structural foundation was discovered by T. R. 2 m south of F3. It consists of a continuous stone along its N-S axis, and a single, apparently fixed stone composing the E-W axis.

The foundation is oriented very near the top of the slope of F12.

The structure's N-S axis is close to line with the Eastern Wall (N-S axis) of F3. The orientation of this unknown feature is uncertain (this uncertainty found). BW 3: 23-24.

Remaining indefinite, it was photographically documented.
Area 2

Contrast Interval: 5 gamma

A new feature? Are Phase 2 foundation (N203 and N210) around these same or separate?
