Crew: Melanie, Allison, Marie, Tim's got poison ivy bad?

Weather: Sunny

The push is on the dozers are coming in 2½ wks and we've got to get things out.

Allison is working on F 7004 Z13 and coming up w/ a lot of nails, pipe stems & has come up with two almost articulated bricks and they seem to line up w/ the bricks in Unit 8195. She will be following the curve of the soil & see where it goes. It seems to be widening out.

BAG	UNIT FEA.	LEVEL	PROV.	EXCAVATOR

Melanie & Tim are still working on the 1A level of unit 7800. They're coming down on a very mottled level. Looks like the beginning of a feature. Lots of nails, glass, ceramics.

One real pretty point out of the 2x2 SE of 7800.

The F7004Z13 has continued south and found several articulated bricks.

The Feature continues South and we are opening up another 2x2 in 2

Wednesday May 15, 1985

Crew: Marin, Allison, Jim, Melanie, David Jones is our new addition which we traded for Jennifer (Boo Hoo)

Weather: Cloudy & cool.

Chaze forms to 2A from 1.B
7912

Allison opened the 2A level in unit 8527 and has come up w/ a circular whitish stain that may be a post.

Tim is following out the feature 7004 Z13 by opening up a 2x2 unit 8582. He is in level 1A right now.

David Jones is going down to subsoil in unit 7800 simultaneously w/ Melanie excavating feature 7016.

Allison has found our elusive post hole/mold in unit 8527. #7020 Z11 The wall seems to turn. We will know when we excavate the remainder

Allison has excavated the "post" F7020 and has discovered that it is very shallow and it did not show up at a higher level. The post had a single nail in it. It could have been a possible fence post.

Tim is has reached subsoil in the eastern 1/2 of Unit 8582. He is getting alot of nails out of this unit. (9096)

DJ. & Melanie are down to 2A in Unit 7910 Artifact count has dropped considerably compared to the surrounding units.

Friday the rains came & all went into the lab. It was a good day in that there was plenty for everyone to do. Tom & Jeff gave gave a little talk to all the new people and we gave Dave Murack a going away cake. I went into the field and finished some maps of area 6B that I needed to finish. Thanks still not finished but getting there.

Melanie & DJ are going down to the 1M level in unit 7910. This is the same tense found to the eastern unit.

We are clearing trees at this time to open up more units to the east and west. David

Fant pointed the tree in the right direction.

Allison has found the corner of the "structure" and we are continuing to follow out the features north, by opening up a 2x2m designated as unit 9107

Julie has come in and given us numbers for the out of the concentration area units 8582 which was formed the NE corner of the 2x2 has been given a SE corner unit 9096.

Look for F 5003-5014 not a feat. or not exc.
5003 is now F 5009

Soil Sample

Jim is working on F 7004 213
in unit 9096 which was 8582
until Julie gave us SE Corners
These units were not specified
as being in a high artifact
area so they had not
been given numbers.
Now we have numbers for
these units. The feature
is revealing lots of rocks
and Jim wants to open
units to the south and
west. There is a structure
here somewhere.

Melanie + DJ are
scraping off unit 7910 &
setting it up ready for a
shovel. Artifact content
has been really low.
This is the unit in the red
gravel lense. 1M.

The cobble feature that

showed up in units 7800 + 7912 has not showed up in unit 7910. There seems to be a feature like stain

There is a possible feature in unit 7910 in the south wall. We will be opening up unit 8022 to determine if it continues.

Unit 8000 main action is being taken on the SW corner. This unit is being dug to see if "the wall" is continuing or if indeed there is nothing there to connect the two areas.

There are two "posts"

in unit 9096 and the wall seems to be turning east.

Wednesday May 22nd, 1985

Crew: D.J. Melanie, Allison, Tim, Marin

Weather: It rained last night. Today its sunny & cooler than yesterday.

* Soil

Melanie & D.J are down to level 2A in unit 8000. There seems to be a lot of brick frags at this level. They're ready for Dick.

Ramona & Kathy Mulchrone just came by & mopped Tommy Barrow. He was left speechless!

Allison has finished level 1A of unit 9157 and has found feature 7004 Z13. At this point the feature is turning towards the S.E. She will be taking this feature out now. Hopefull we'll find where this sucker ends or turns!!

Dim is still working on F7004 Z13 in unit 9096. This

been finding lots of nails and an ABC ceramic piece of a cat (?) w/a long tail in a green background. Interesting piece circa turn of the century I think.

The well is down to 36 my bet's at 39 so I'm anxious to see how far it goes. They've found some vertical beams in the bottom as if someone threw them down into the well maybe even not too long ago. They're getting the well near head ready for the well crew!

Just got back from the Dr. She looked at my poison ivy/oak & wanted

to give me a shot. I told her no & she got quite indignant. So I got the cream instead & a perscription for a tranquilizer AVARAX!

Davey and Melanie have found a feature - yeah!! It's got brick, mortar and flagstone in it. I would like it to be the end of the brick feature but who knows

Payday!

Friday, May 24th 1985

Crew: Jim, David, Melanie, Allison, Marie

Weather: Cloudy

BAG#	UNIT FEA	LEVEL	PROV.	EXCAVATOR

Yesterday it rained buckets. I opted for the field mainly because I can't get any work done in the lab because of all the people. I got chilled in the field & decided to go home & take care.

We bailed out units this morning & I'm still doing it.

Delaine & Davey are still working on unit 8020 & have uncovered a feature which may be a post at the north side of the trench.

Pat has come by & has suggested that the east side of my trench is the "inside" of the structure and the west is the outside which is opposite of what was

thought of before. It still remains to be seen but it sounds good. That the trampled area would be the feature 7004Z14 and the hard compacted area would be the house pad of the structure.

Tim and Allison are still working on the F 7004Z14. It has turned southeast at the point & we will be opening a unit east of the feature.

The rain overtook us on Friday & we went home relatively early / 3:00PM.

Tuesday / May the 28th 1985

Crews: Davey, Melanie (to the screens) Tim (Allison still at beach) Matt has joined us to screen.

Weather: Sunny warm.

Back from the Memorial Day Weekend which was a wonderful break.

Melanie has been sent to the screens for this week. Allison is still at the beach from this weekend.

Tim is finishing up unit 9157.

Davey has found slight evidence of a trench in unit 8020 & will be digging out the Feature -

Forms for features dug by Dandy

It's threatening rain but will stay out there til it does.

Jim & Nell have started on unit 9094 & will take it down as fast as possible.

Dave & Allison are excavating unit 7914. They are down to the red sand level in the SE corner 1M level. In the NE corner there is the 2A level showing already.

Melanie is still working on level 1A in unit 9098

Two days & counting!!

Melanie has found a post mold-hole Complex in unit 9098. Everyone is a bit skeptical about what it is but I believe that it's probably in line with the post that Jim found in unit 9094.

Dana is just finished with the house 1M in unit 2914 level 2A. He will be taking out level 2A now which covers most of the 8½ of the unit.

Melanie is down to 2A in unit 9098 which is where she found the post mold-hole.

Can't wait til the day is over!!

Thursday May 30th, 1985

Crew: Melanie, Tim, Matt
Davey Jones, Marie

weather: Cloudy, cool

What a morning ahead! Brenda crew chief of the well crew has turned in her resignation this morning. Her crew is scattered throughout the site until the well in area 6B is opened. Sly's crew chief!

David Jones is down to 2A in unit 7914 and has found a feature F 7041, in the South wall. We will not be excavating this feature or any features at this time until the grader takes the top soil off & exposes features. We will be opening the

next unit to the south of his unit. This is unit 8024.

Melanie unit 9098 has found an amorphous stain near a tree in the East wall of her unit. It smacks of being a tree root. Since we will not be excavating features yet we will give it a number & wait to see if it survives the grader.

[illegible]

There is also a stain that looks very much like a post mold near the south wall.

We will be bisecting F 7043 to determine if its a lense or an actual feature.

Jim has not found many artifacts in unit F 9094 & will be down to subsoil soon.

Friday May 31st 1985

weather: cloudy, hoping for sunshine!!

Sunshine at last!!

We finished DJ's unit 8201 2A yesterday in the nick of time before the rains came. Dick photographed it and DJ is doing proper work this morning. The trench F 7048 was found in this unit so he will be excavating it whole.

Melanie & I have been having a time of it excavating unit 8024 level 2A. It has a huge tree w/ lots of roots surrounding it. It's been a real struggle & we still haven't heard whether we'll have a bulldozer out here or not. It would be advantageous if we got him out here tomorrow.

Friday, June 7th 1985
9:25

Crew: David Jones (late & then sliced his hand w/ his sharp tromel) Melanie, Tim, Matt, Kathryn, Marin.

Weather: Sunny & cool

BAG	UNIT TEA	LEVEL	PROV.	EXCAVATOR
4784	T041	Z12	8024 2A	D.J.

Melanie, David & I are still in the "tree unit". We are down to 24 in unit 8024 and have found the trench on the floor.

Tim, Matt, & Kathryn are doing real well at the water screens. I think Tim has found his niche as a matter of fact he's asked to do it all the time. I have suggest it to Tom.

The bulldozer isn't here yet - Damn - He'll have to wait til Monday.

There's excitement this morning w/ the moving of the well Islet Farm Road area 2 to 6B Marion's well.

The cellar has also found a well!! We should

Call this the well site.

Taking Mulchrone out to dinner for eating the worm. Taking Tom to the airport, computer & all in Sterling car. Life is nice sometimes.

F 204 212 is being excavated by DJ right now. The bottle that came out of the Feature says RUMFORD. This seems to be a building. Maybe the "L" shaped one. Maybe that's the one.

Floor should have been taken down further so all the stains would go away.

The State people are here & we may talk them into digging the new well officially.

We are opening yet another unit to see if the trench we've been following goes into this unit 8079. It's a 2m x 1m adjacent to

The new well looks like it has bottomed out

Kathy, Melanie & DJ have finished level 1A of unit 8079. Dick is photographing it now.

The wicked three are continuing w/ unit 8079 & may not get done until tomorrow when the bulldozer man comes.

Tuesday June 11th 1985

Crew: D.J. Melanie, Kathryn, Maria

weather: Sunny warm (yeah) The Bulldozer man is here!

D.J. is writing up the notes on F 7041.
Melanie & Kathryn are cleaning up so photo dick can come our way
The bulldozer is ravaging the area. He's amazing.

Kathryn is back at the screens, David Jones is farmed out to Loretta & Melanie will soon go to the screens after she finishes the paper work for 8079.

The only people left in area 6B right now is Marions crew. They're frantically finishing up their features. Peter is struggling w/ a crooked wheelbarrow trying to get it to the water screens.

47910
11-6-13-17-24.

Wednesday June 12th 1985

crew: Tracie, DJ, Kathy, Melanie

weather: Cloudy, muggy & Rain Storm

It's napping day! DJ is still screening for Loretta, Melanie is screening for Chuck & Kathy is water screening. Matt is also water screening & Jim (who is no longer in my crew) is still screen queen.

Thursday June 13th, 1985

crew: Ha! David is home taking care of Emily who had a migraine last night. Melanie's gone home sick. Kathryn is digging w/ Chuck. Tim & Matt are at the screens. Tim being the permanent screen queen.

I'm working on my map of area 6B. It's slow in coming but it will be done soon.

Map is done yeah!!

Friday June 14, 1985

crew: Kathryn, DJ. Melanie. Genevieve was feeling sick from party of previous night. Me too!

Monday June 17, 1985

Crew: DJ, Kathryn, Melanie still in Wolburg. Allison is back!

The crews is scattered. It's good to see Allison again. She had stories to tell of England. I spent the day bagging soil samples in Lindall vert so they would be ready to float. Boring but OK.

Tuesday June 18th, 1985

Crew: DJ on Doug's crew, Kathryn on Chuck's crew, Matt & Tim on screens. Ann doing floats w/me. Allison also on Doug's crew.

The crews have been asked to go to the lab so we'll probably be switching off.

Were back in area 5 for what its worth. Probably going to dig out the features that are left.

BAG	UNIT	LEVEL	PROV	EXC
4464	F5005	Z11	Hole S½	DJ.

4466	F5009	Z11	trench	MA
4467	F5010	Z11	N½ Pocket	HM

Allison is digging out F 5008 which is an shallow peri-circular mottled red clay such as you would find in a post hole. We pulled out a blackened root-like object & a piece of a bone bead. Nothing other artifacts found yet.

DJ is digging F5005 next to the North wall. Not many artifacts coming out of here. He's pedestaled the mold & is digging out the hole.

Howard + I are digging the mold around F5005Z11 which is the N2 hole. A knuckle bone and part of a long bone were taken out of this feature. It looks like a post mold / hole complex w/a trench feeding into it.

Wednesday June 19, 1985

Crew: Allison, DJ, Melanie (on screens) Kathy (w/ Chuck) Howard

weather: Sunny + Cool!

Allison finished feature 5008 & did all the paper work but the profile. She's now working on F5010Z11 drawing the plan + profile.

Howard & I are excavating F. 5009Z11 the trench.

DJ - still working on F5005Z11

BAG	FEA. LEVEL	PROV.	EXC.

*4517	F5024Z14	S½ hole	"

We have now a feature number to the back stair abutting the south wall of unit J 50 12. F5024

Allison has been doing F5024 - it has proved to be a skeleton-plastered area

Thursday June 20, 1985

Crew: Kathy, Allison, DJ (late)
Howard, Melanie
weather: Cool & Sunny

BAG	FEA. LEVEL	PROV.	EXCAVATOR
4518	F5005 Z13	S2158275	DJ HM

The grader is here!

Allison is digging the hole & post in F5010 & it's a deep one. The post mold shows up round and deep and the hole is classic. We've been getting pipe stems & bricks from it. The feature next to it F5024 was a shallow circular mottled stain w/a dark charcoal stain w/in it. It's a post mold-hole complex but shallow. Maybe a tube dug next to the post?

Friday June 21, 1985
