[GEORGE] → have some —
some needs development —

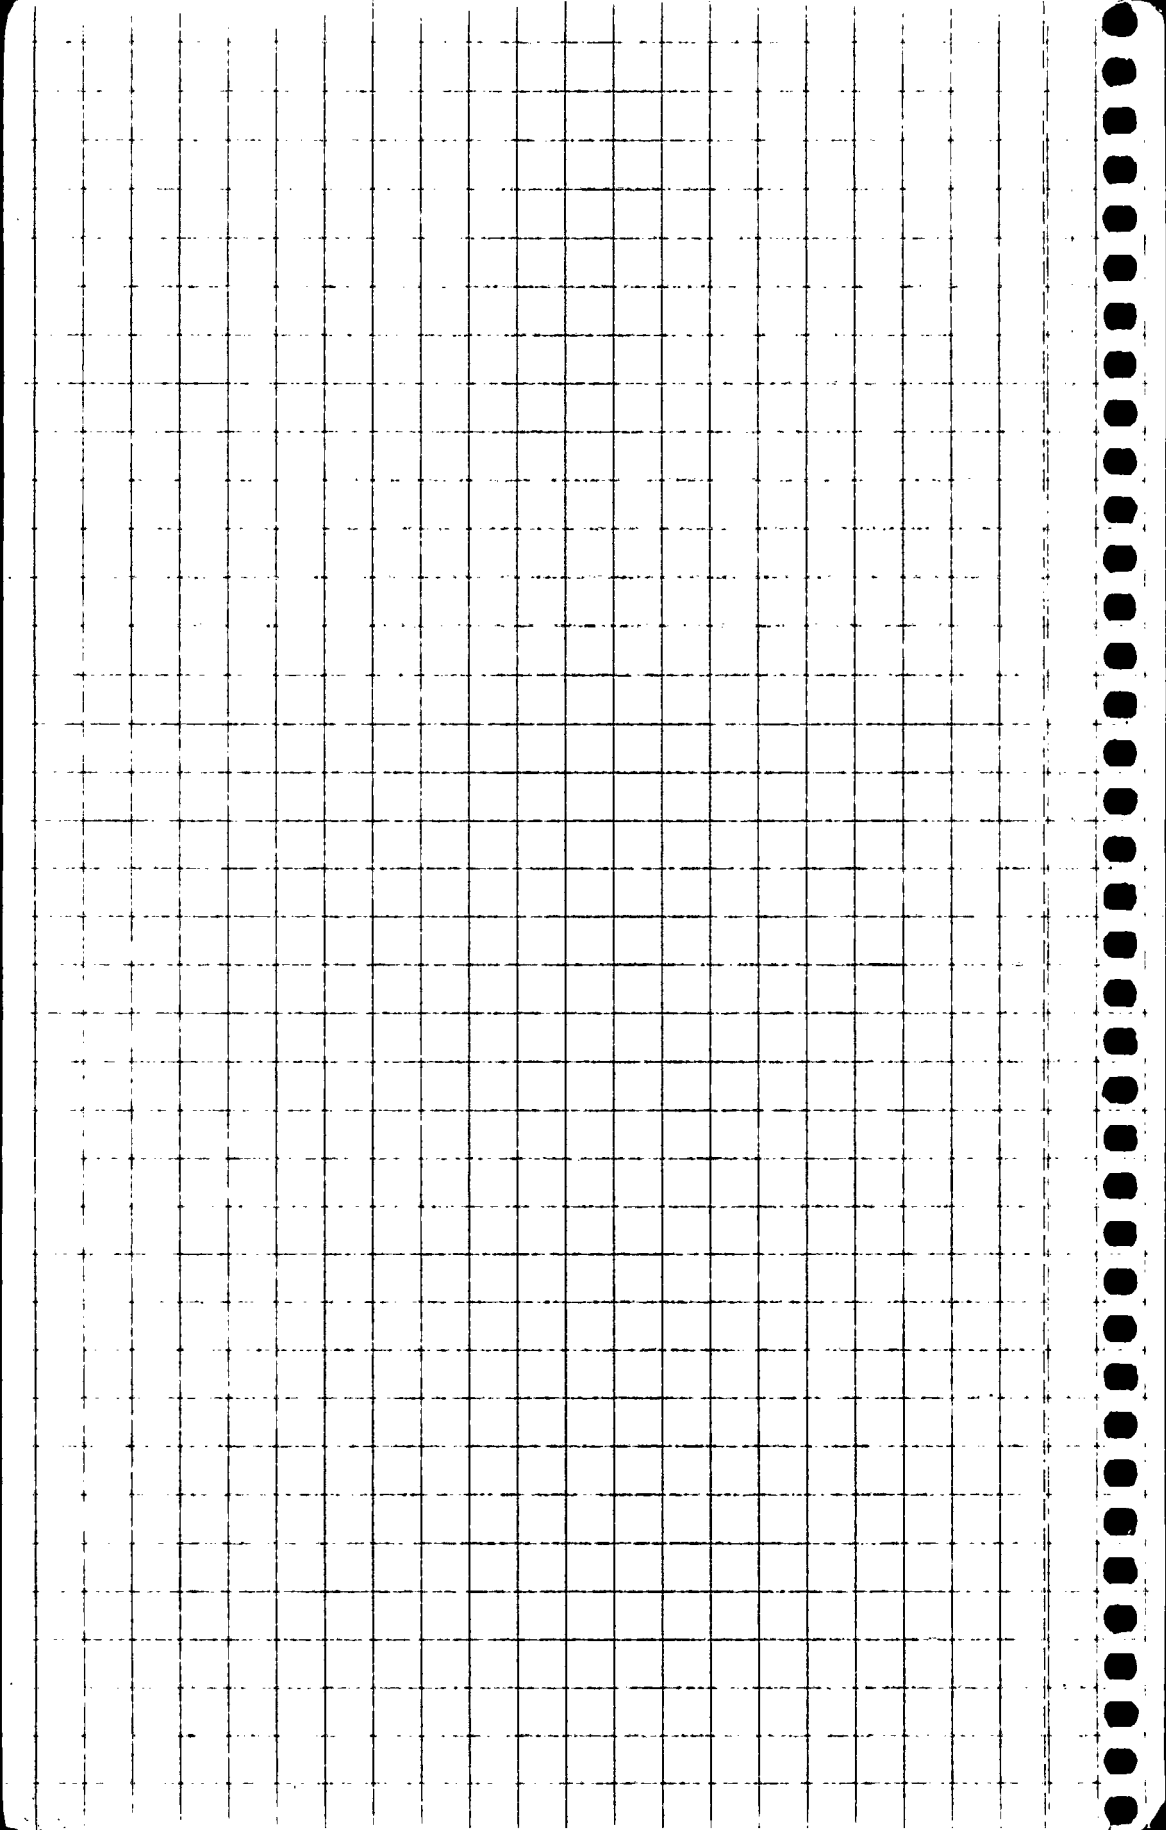

Will have it sent out ←
will send photo note book.

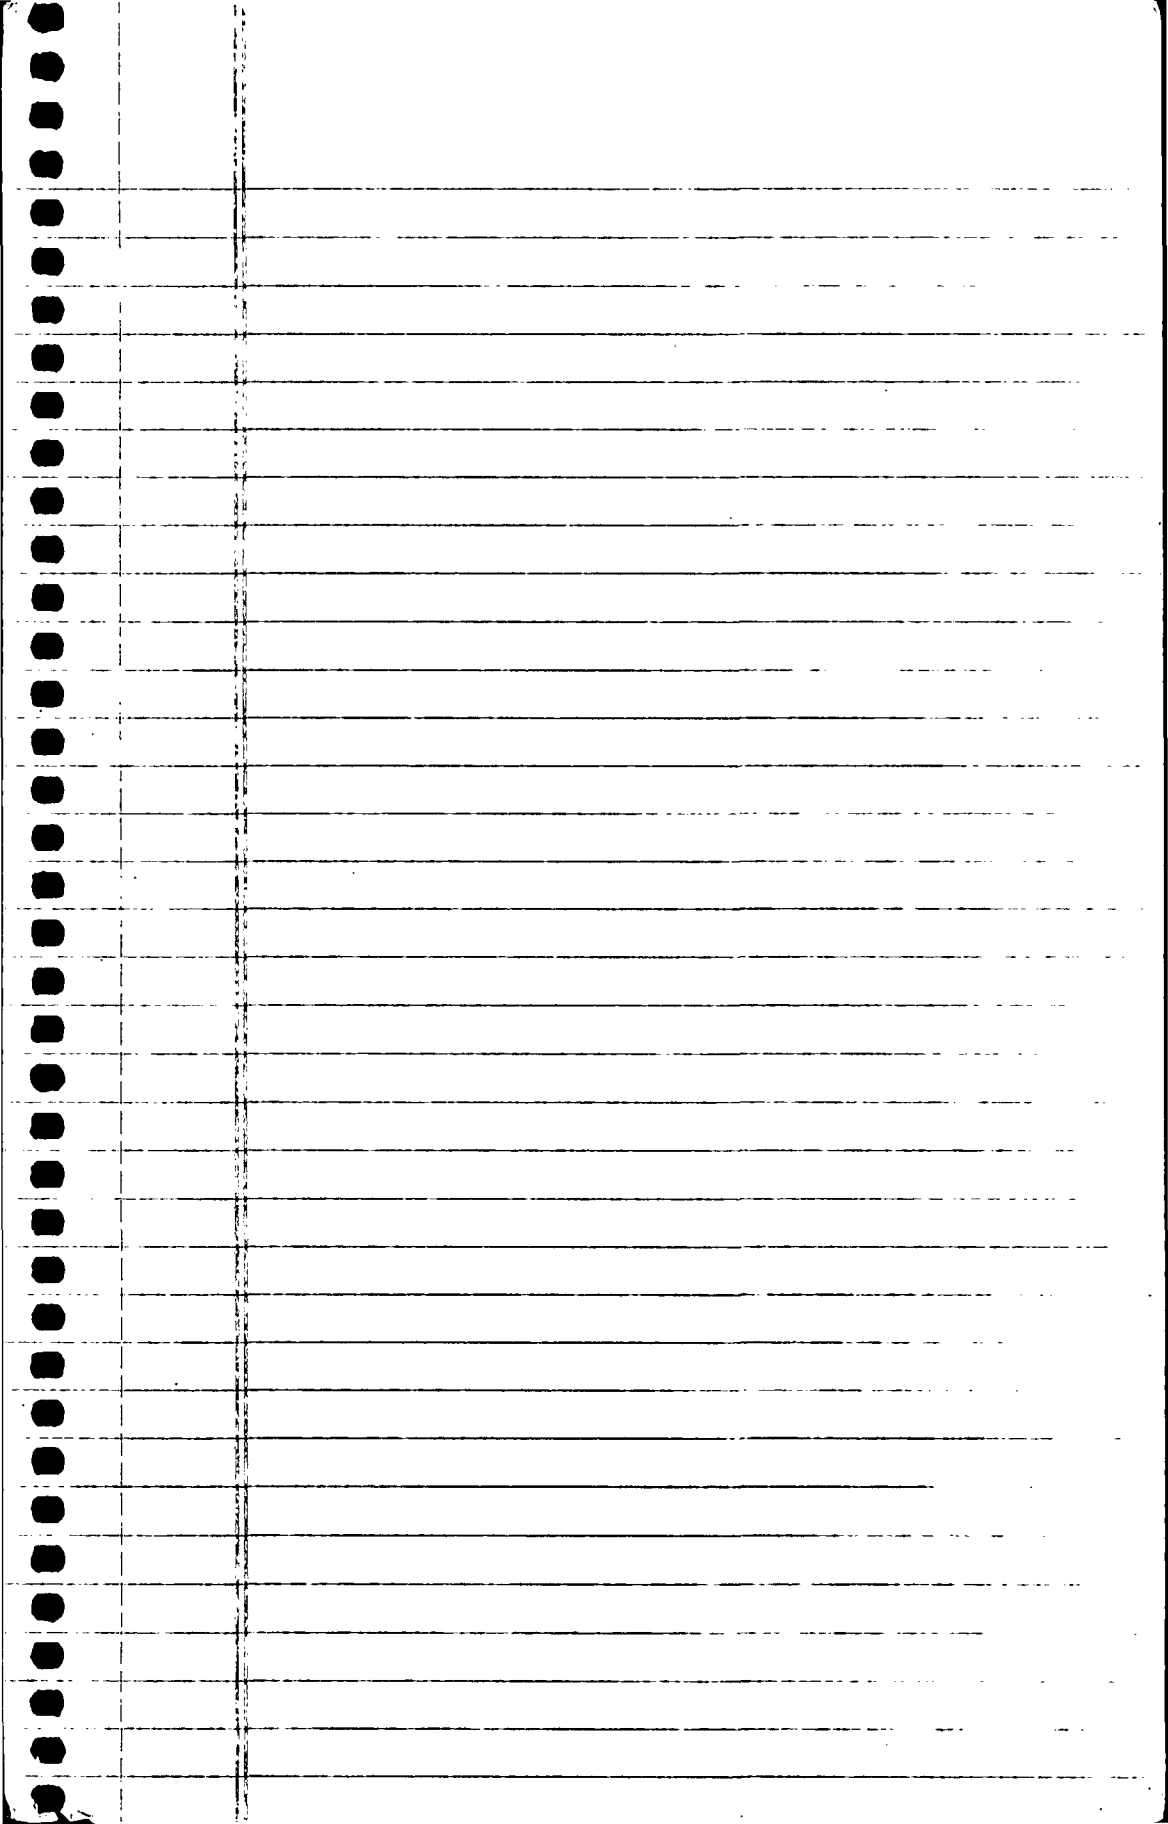

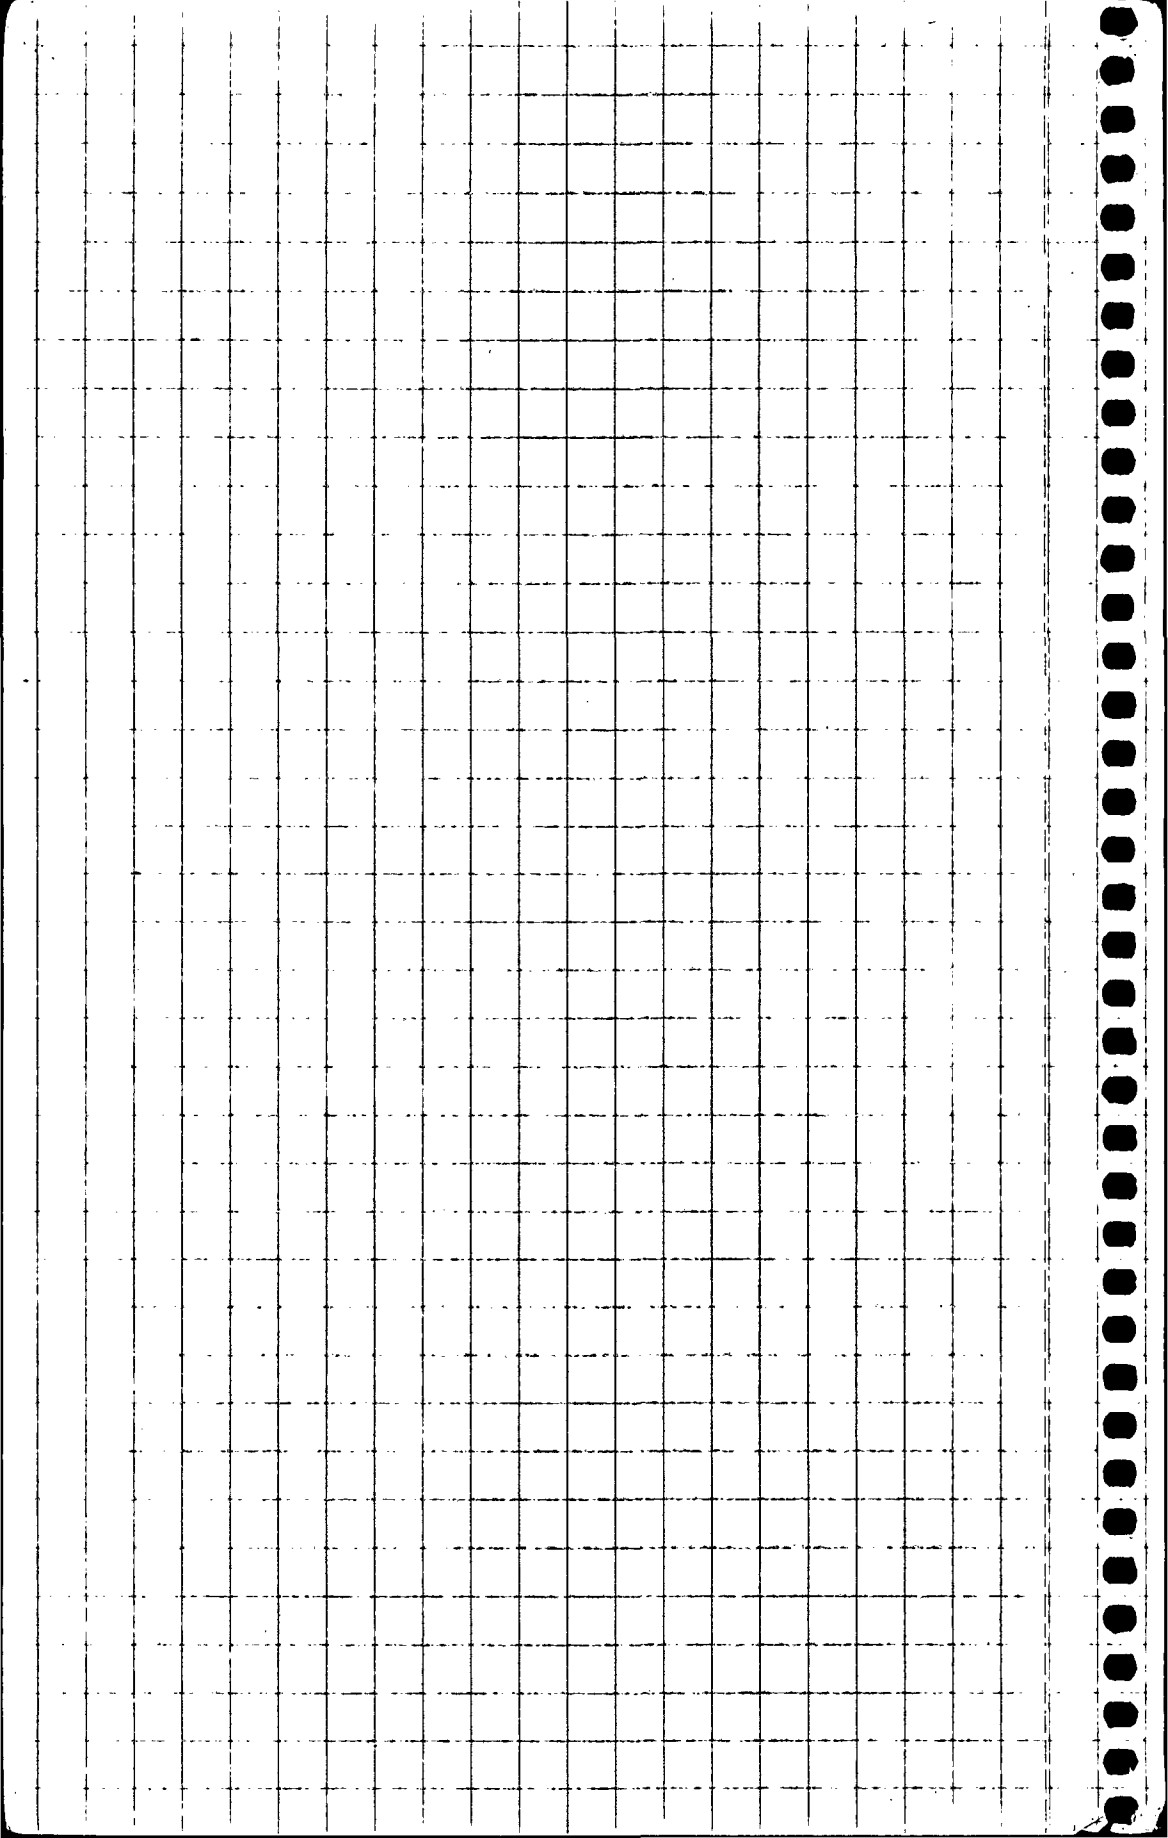

11/12/86

Betsy Grove & Sam Ackerman
showed up at 1 pm
Cool + clear today -
Crew: — John McCarthy
Jeanne Ward
Mike Strutt (7:45) - stuck on bridge
Cecile
Bill Roulette
Betsy Grove (~~1:45~~ 1 pm)
Diana Vank
Dory Richs
Mike Robichaud
Mark Franks
Sam Ackerman (1 pm)

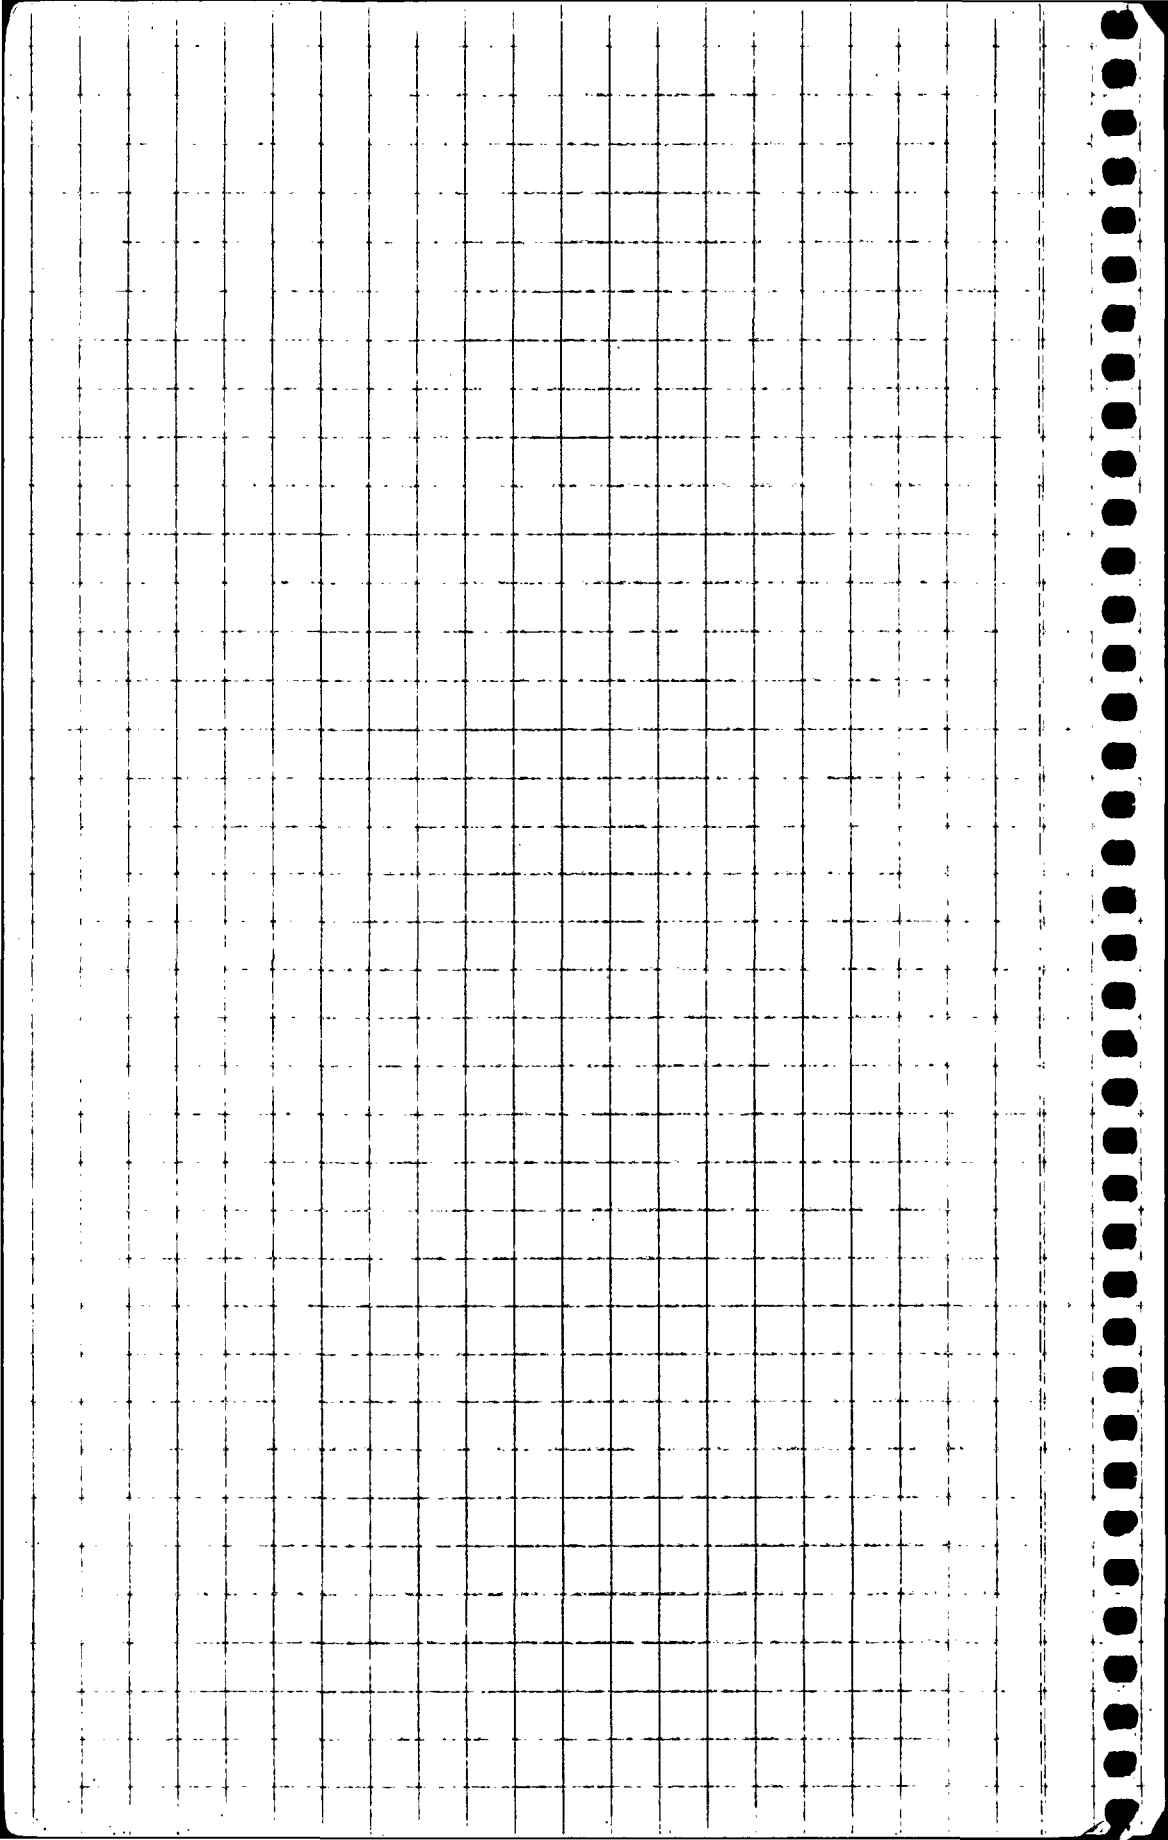

NOTE: must make list of per diem
per person per day.

Built 2 water screens today.
Dug out the Garon well - top
shattered - appears usable. Had
to contact well people. Charles never
told us which firm contacted by
Garon for job.

John M^cC doesn't care if elevation
on meter. — Geological Survey
marker - by my memory - is 55.6
meters above sea level.

Returned to clearing area VB, VA +
VI in that order.

Terrace appears in area VB +

runs to #A - may be a road.
Appears to have been cut by
brick (poor) structure in VB &
the deep hole in V.

Immediately to the east of area
VB in between E320 + 325 large
dark stain w/ charcoal found +
oyster shells near E325. Of course
both outside area VB.

NOTE: remove VB - 2 stakes
from E325 as is beyond area

NOTE: let Cecil + Billy Ray
read data recovery plan.

Removing small trees w/ bow
saw by Doug + Cecil.

Make Roland - inexperienced as
is Marc Franko - Mike handles
shovel poorly - Marc pulls up
buried roots - keep an eye on.

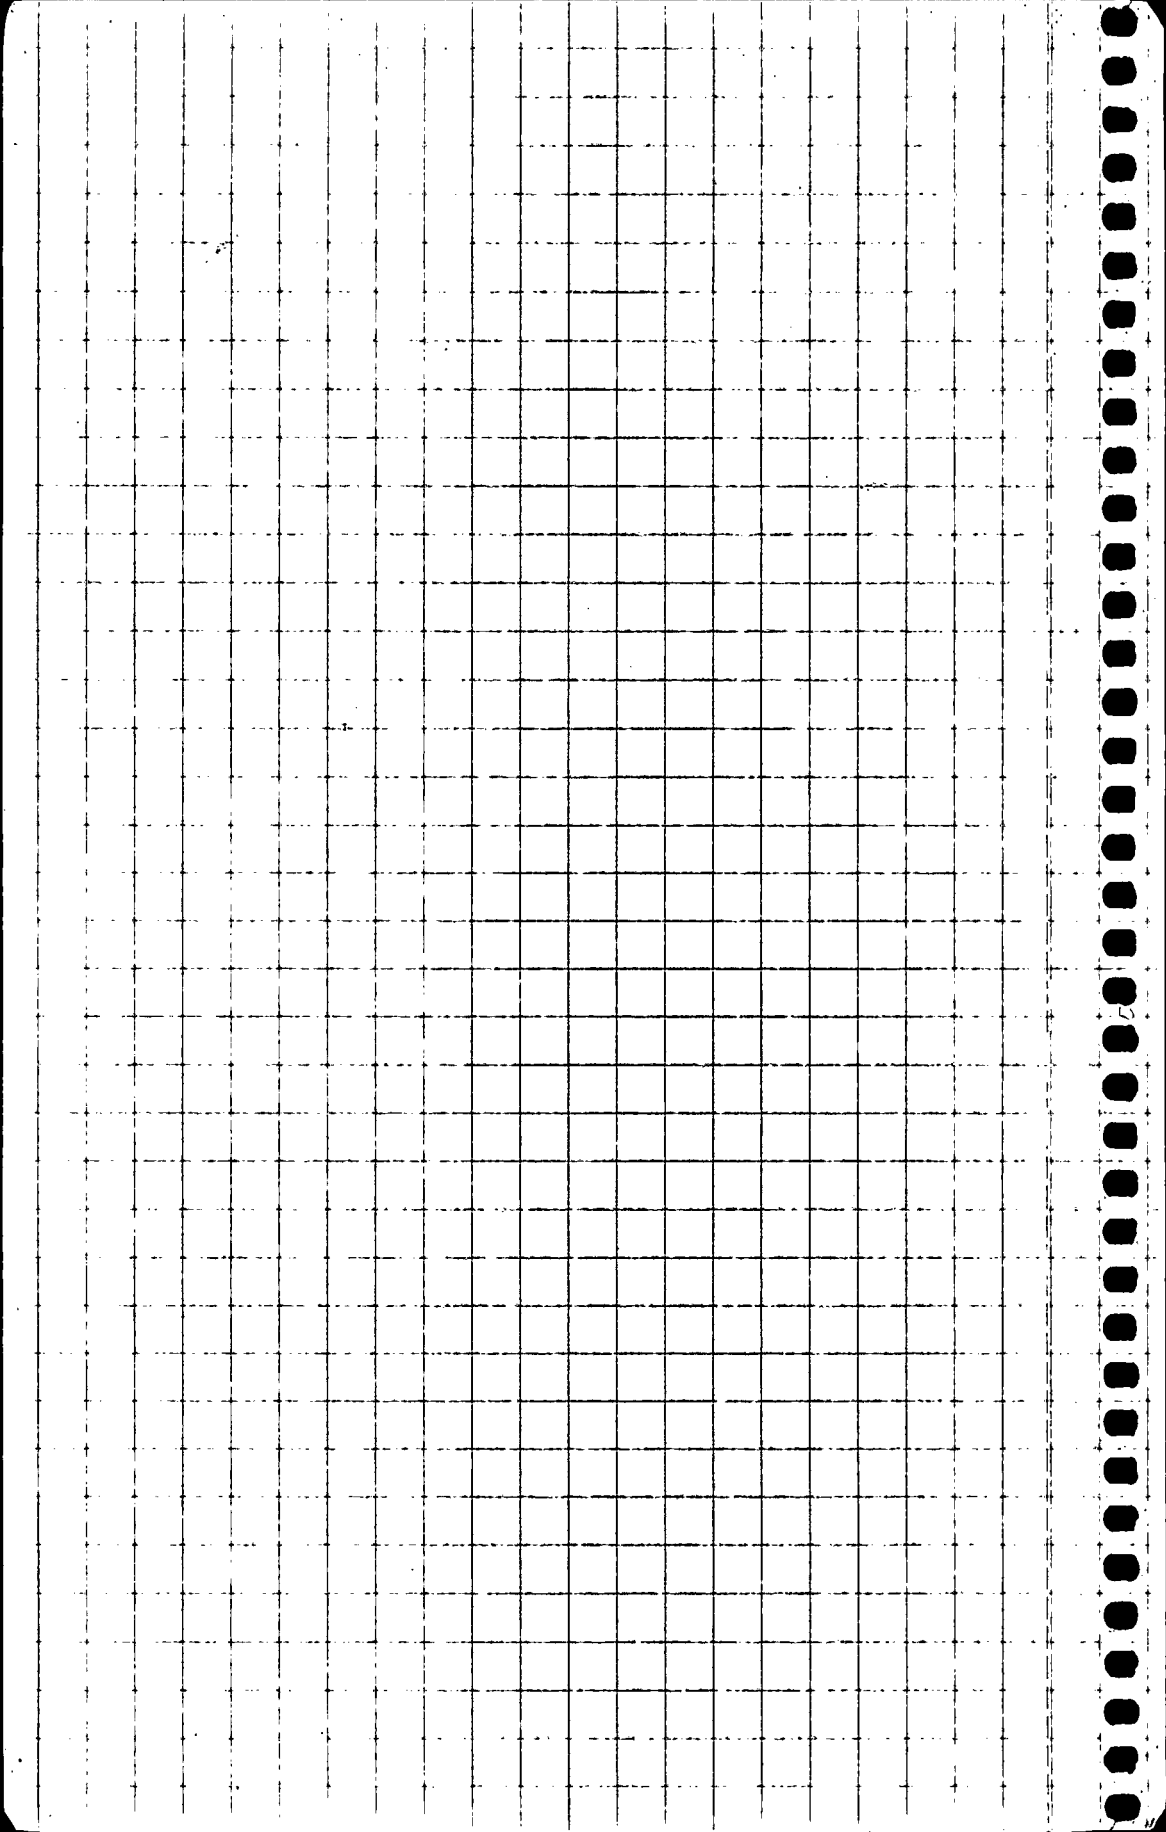

Signed time sheets today.

→ Do banking tonight. ← 5-7pm.

NOTE: see that Nomen made it to
room alright - Oakwood on
lookout for him.

NOTE: Mike R. needs to find alternate
driving route rather than
my van!!!

NOTE: make calls tonight to crew members

Scattered bricks also seen on rise in
VB.

11/13/86

All areas cleared, trees down -
crew chiefs have had excavation
techniques explained.

Excavations begun in Area VB
w/ the soil features. 2 units
being opened by crew chiefs.

Opening up 2 2x2s - shoveling
the units. In unit S212 E310
have 2 crew chiefs - Mike +
Cecile,

In unit S214 E306
have Betsy + Mike.

Have drawn in previously
excavated units of checkerboard
pattern. Ended in level layer
A.

? [John presented idea that area VA +
VB may have been 19th century
deposition site.]

All crew present.

Friday

11/14/86

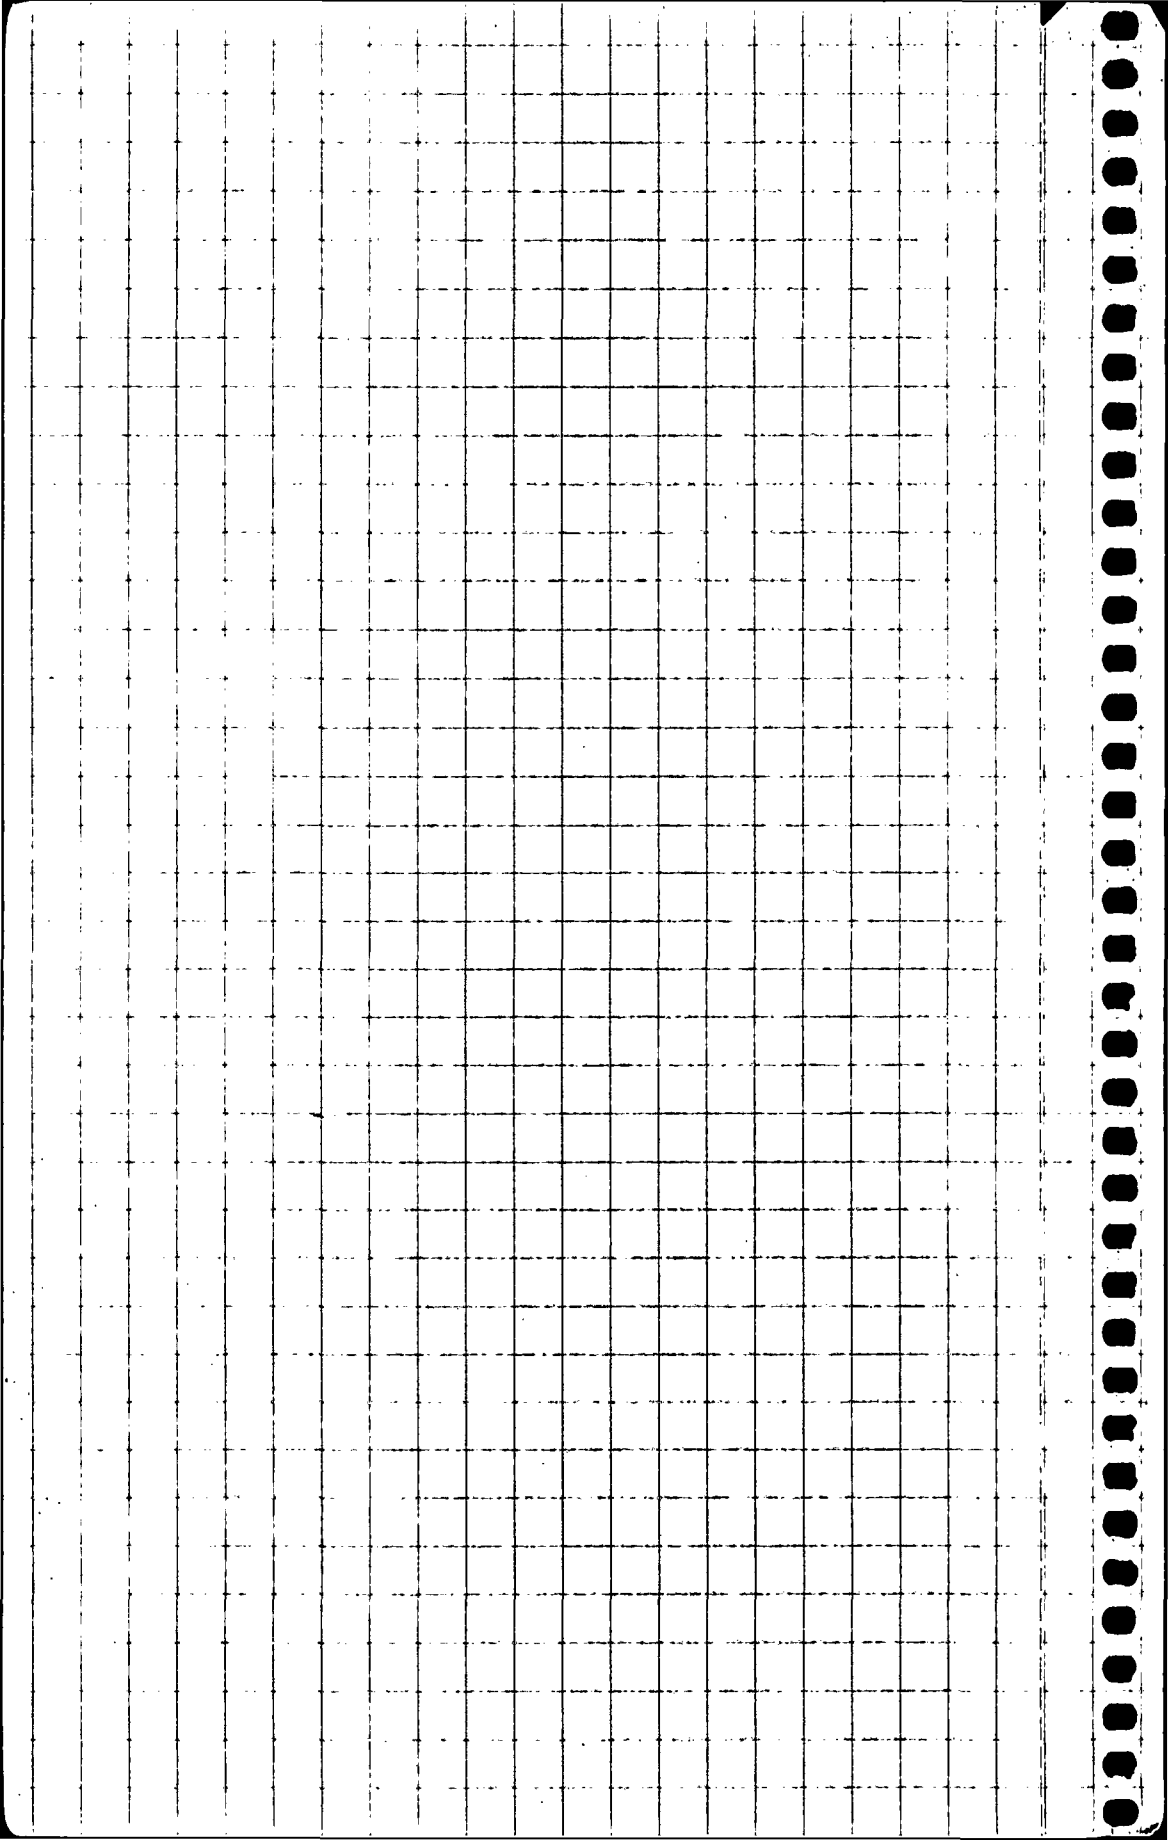

Crew:

Jeanne P

Mike Strutt

Cecile Glendenning

Bill Roullet

Betty Grove P

11/14

Doug Dicks P

San Anton P

Mark Franks < see if need a room.

Mike Robirhand

Norman Little P

Becky Pomeroy P

find out story
from Charles

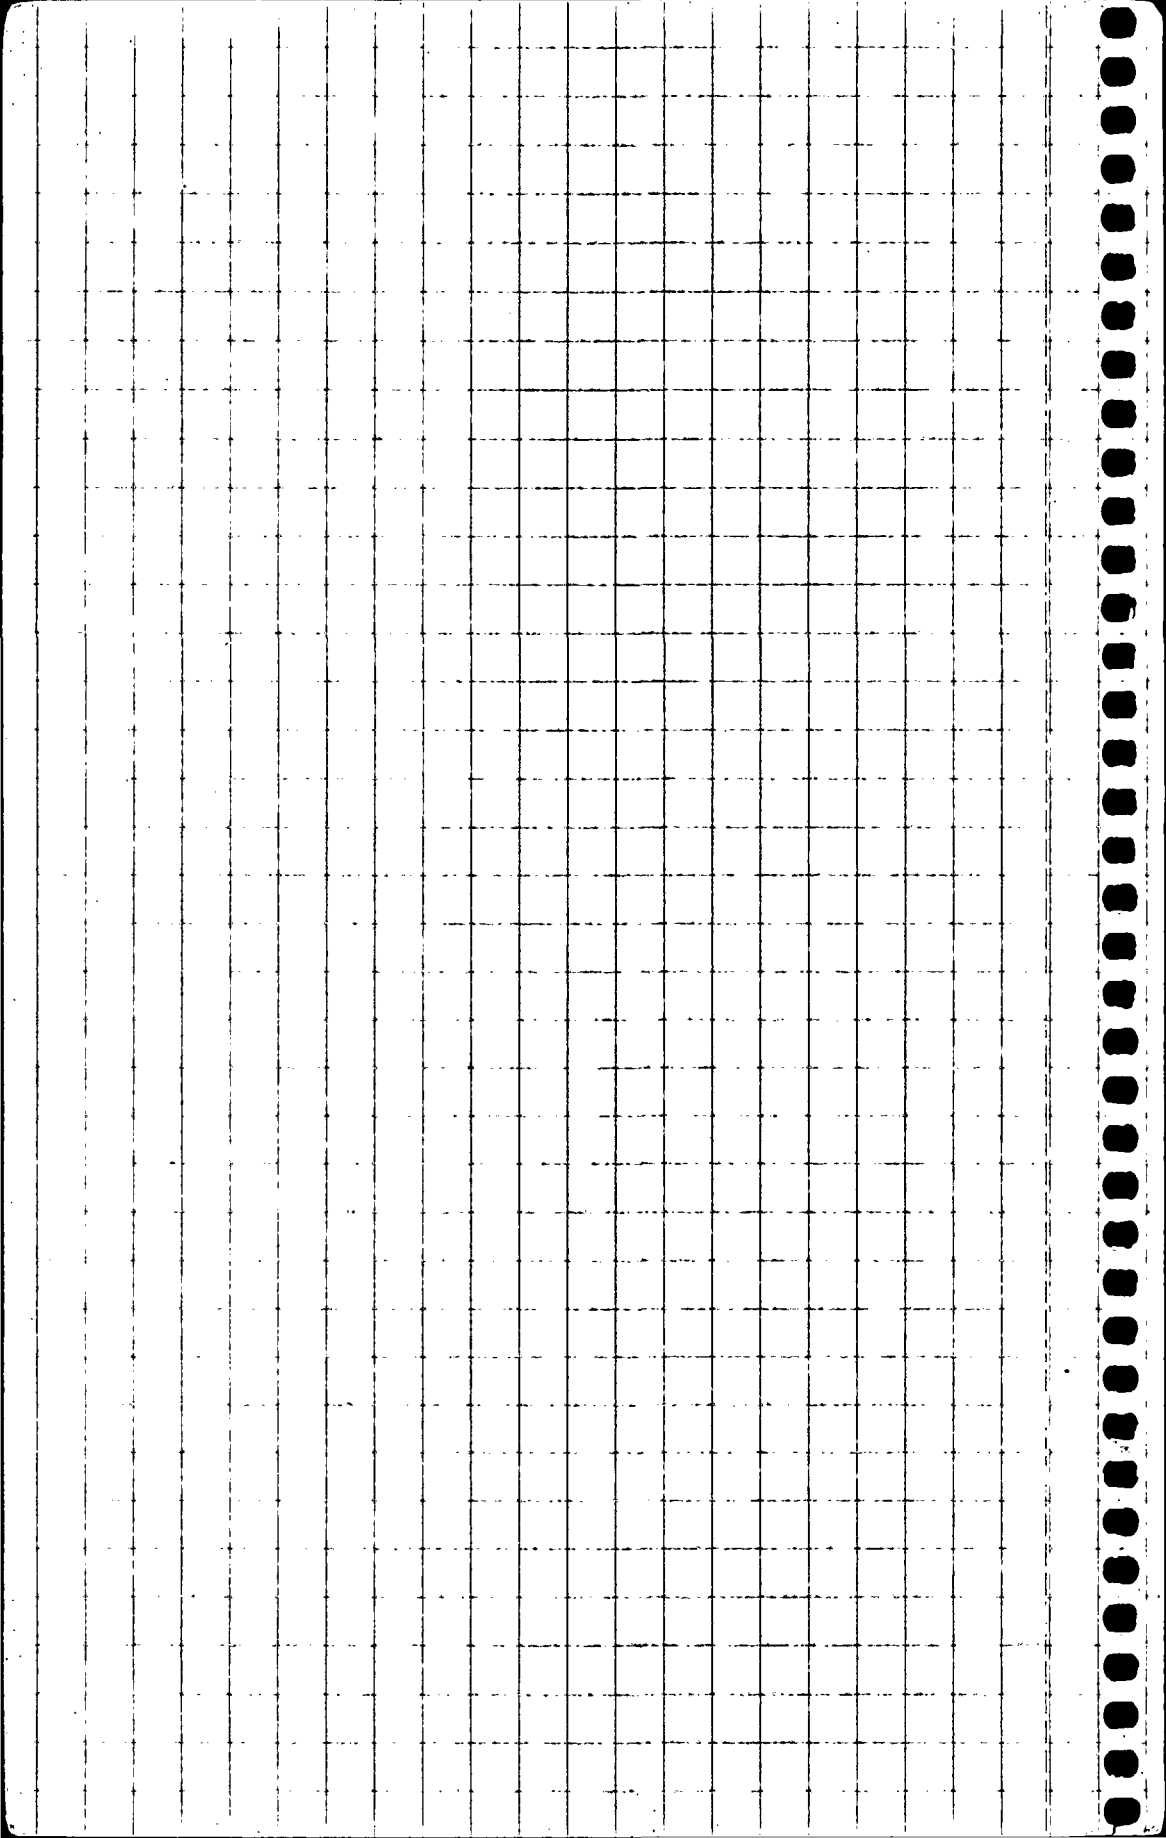

Norman Little to be site photographer

Cold today = 4° but little wind &
warmer than yesterday = 20° w/ 10 to 20
mph winds.

Unit S212 E310 - Mike & Cecile -
taken down to layer C & features.
Near north central edge have a
dry hump which is of the same material
as layer B of similar charcoal &
brick flecks - maybe edge of feature.
Similar hump - one along N edge &
one along W edge seen in unit
S214 E306 which Betty & Bill
excavating. Two artifacts appear in
layer C of S214 E306 - one wine
bottle neck & lip - hand turned &
hand blown and one spoon - green
tinted.

From both units flints from
Europe (don't know if from England or
France yet) have been found.

20th century artifacts appear in
layer A. Older as descend through
B. One bead located in B of S214 E306

Units currently being excavated in 2×2 meter units - opens up a large enough area to get a handle on the features. Charles + John approved. Some discussion w/ Charles however of doing 1×1 s w/in 2×2 s to keep better track of the artifacts distribution w/in the units. I agree. Will discuss when he returns this afternoon.

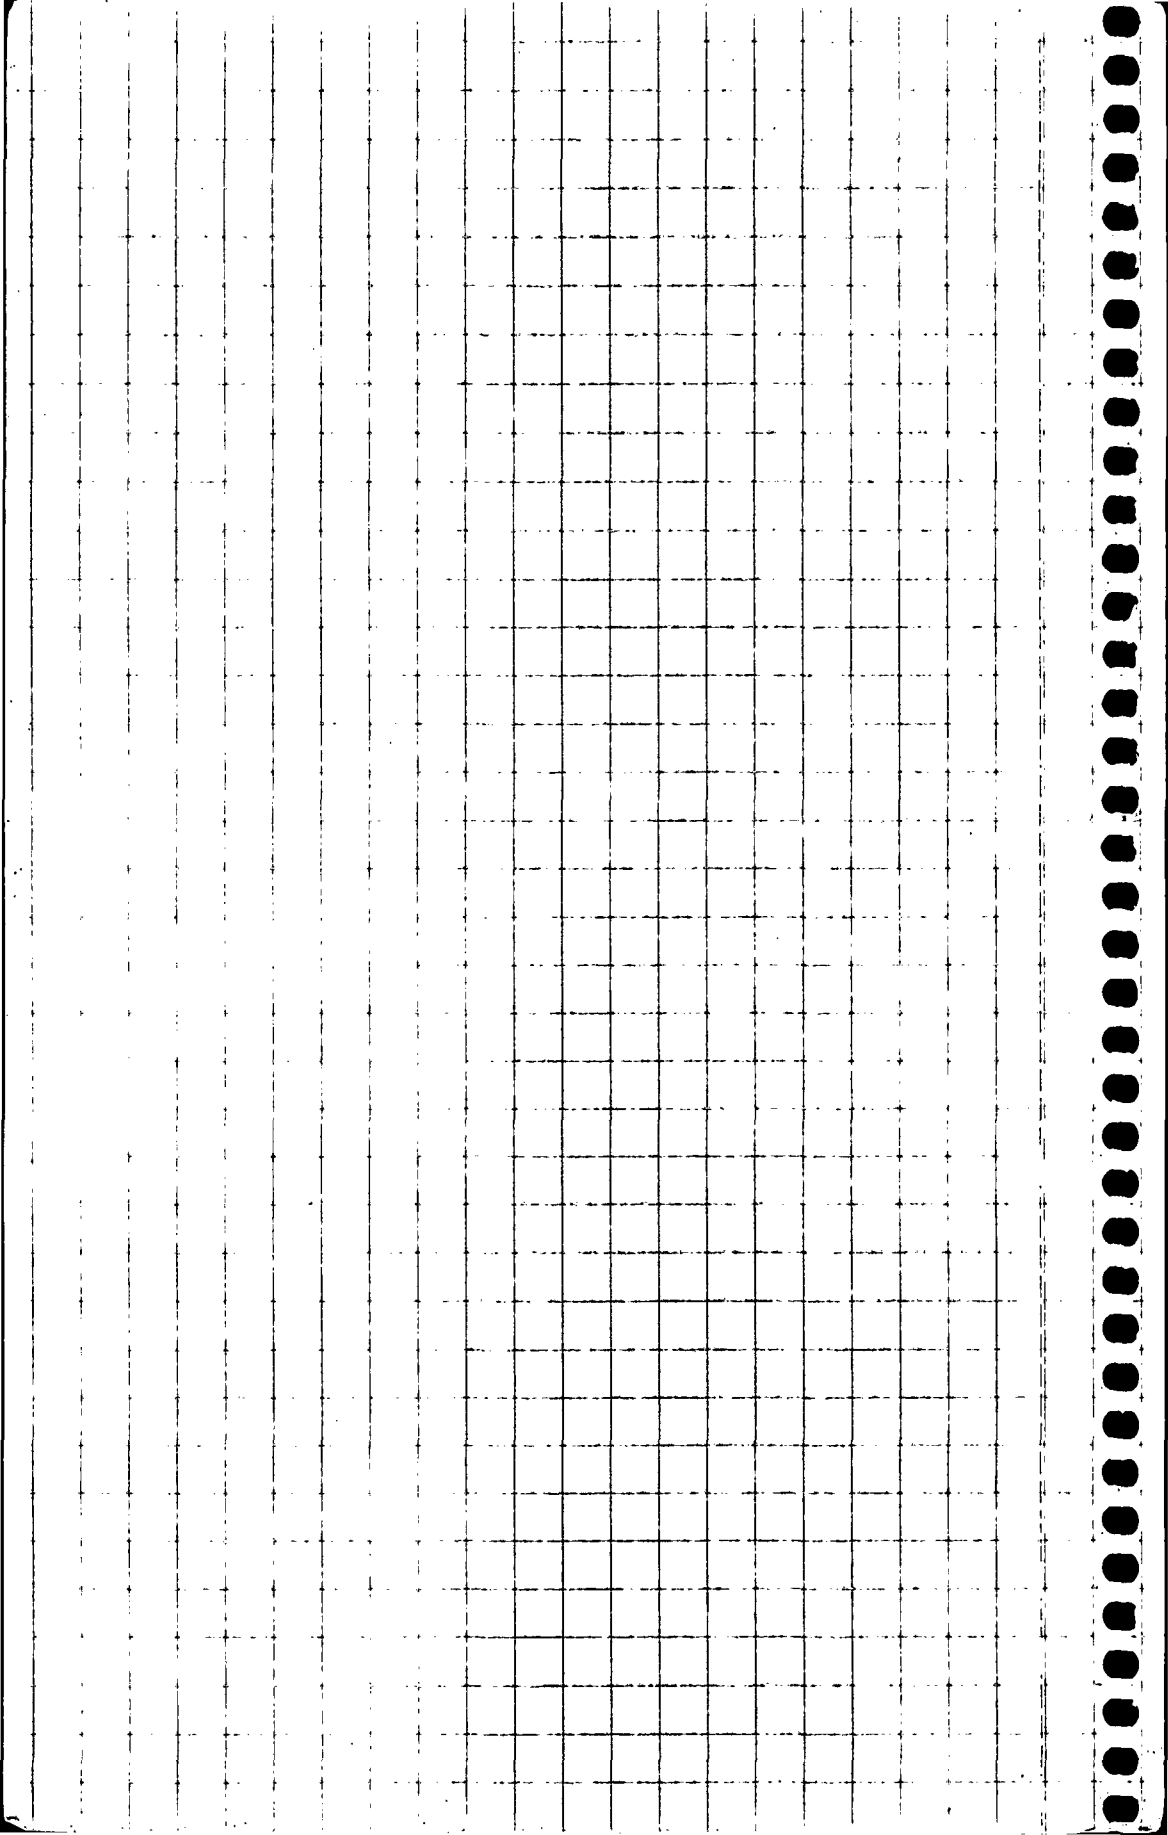

Gridded out portion of Area V + VA (NOTE: NEED MORE SPIKES). Will open a 1×2 along eastern edge of Area VA to determine stratigraphic relationship between the brick depression and the "ice house" and a 1×1 along the west edge for the same purpose between "ice house" + "meat house".

→ Janne making maps of all areas on graph paper. Also contour map at 5 meter intervals.

→ Charles will provide clipboard + graph paper.

Trailer + porta johns should arrive Monday.

Difficulty w/ Sam Ackerman + John McCarthy over ride. John said could take Sam to Newark, Del. for weekend through me and now apparently has forgotten. Left yesterday + Sam in lurch. Options - get ride to Baltimore

5) Norman Little + call friend for 11/14
rest or take advance + ~~catch~~ catch a
lous — doesn't like either idea. No more
I can do → NOTE: NEVER BE
MIDDLE MAN IN NON-ARCHAEOLOGICAL
AREAS AGAIN. MAKE NO DEALS.
ALWAYS, IF FORCED, SUGGEST LONGER TERM
DEAL. ←

Both Becky Roman + Mike Richardson need
watched. Becky will sit around if
gets chance. Mike just inexperienced.
Betsey + Becky can be complainers.
Sam Cushman seems to keep problems to
himself — like that — we'll see!

Hatchet broken — ironically Sam had it
+ it broke shortly after told him the
bad news — keep eye on.

Back to archaeology —
Charles suggest shots of site w/
crew — B+W + color for talks.
Talk to Norman.

11/17

Crew chiefs & crews: ~~B~~

Mike Stuntt: Area VB

11/24 - 11/28

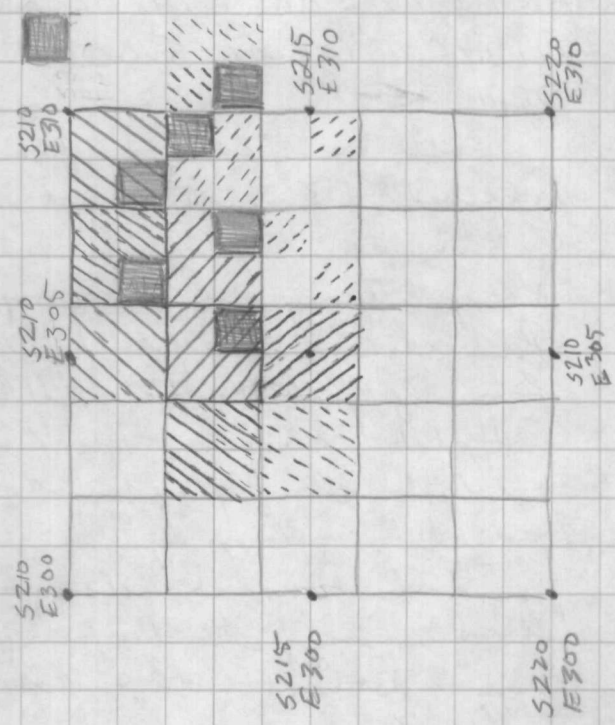

PREVIOUS UNITS

MIKE

BETSY

Cecile Glendonning; Area V

11/17

Ann Davis
Dory Dicks
Mike Robichand.

Jeanne Harris
JH Snyder.

NOTE: Cecile needs new comptant
crew. Bill's may be too strong.

Bill Huser
David Mallett, missing
Susan Weidener showing up on 11/23.
Call Vernigle - but not have been
called. Get her here ASAP.

Charles is supposed to have trailer
& porta johns for today.

Area VB may be beginning to see
edge of major feature

2x2's will be taken down in
1x1 m units w/ main datum the
corner of the 2x2 for all 4 units.

Problem w/ soil samples!! May have to
take soil from carefully dug soil
w/out going through screens as can't
tell which soil is which!

* David Mallett Sick

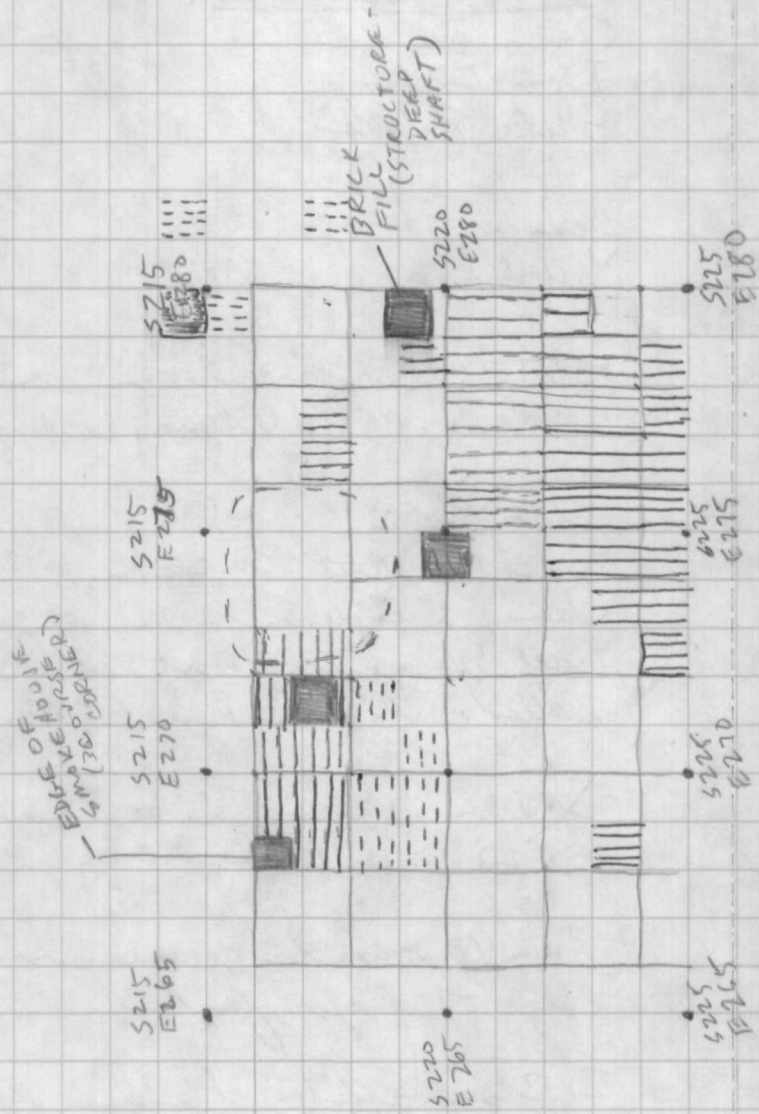

AREA V 11/17 (PARTIAL) - 11/22/82
11/24-28

N

PREVIOUS

BRICK

CECILE

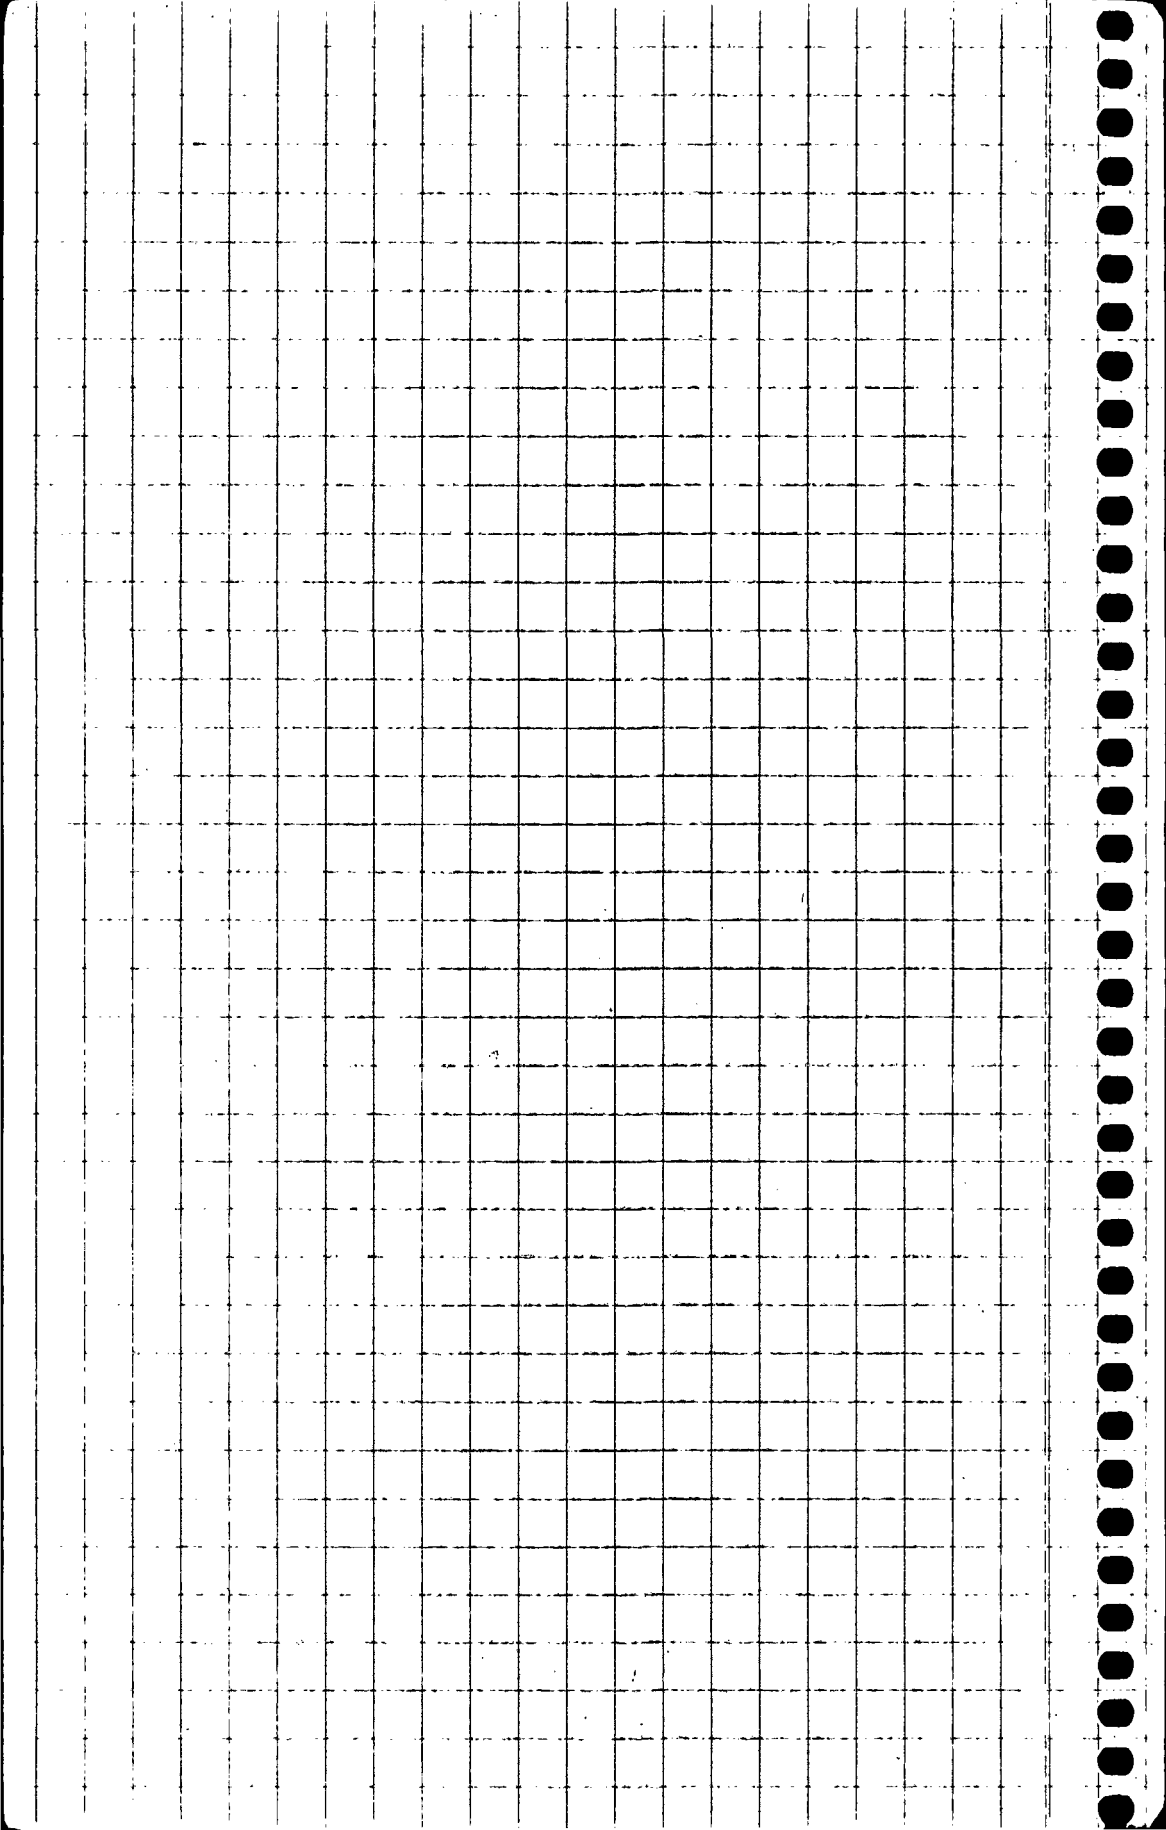

Area V around icehouse. — 11/17

S217E272: several layers of red-orange gravelly material which surrounded a layer of fine black meathouse silt. The orange layer is the same as was in the base of the icehouse pit which was previously dug. All this was above the meathouse indicating in my mind that the icehouse was dug after the meat house was abandoned & torn down. The overlying material in the mound (hypothesis: when icehouse dug material mounded around top of icehouse & covered site of meathouse) was almost sterile. Wall of the meathouse exposed to $5\frac{1}{2}$ of unit.

In unit S218E272 beneath fill was ^{yellow} gray floor w/ charcoal flecks. Possible features in this level. (Hypothesis: numerous features should be found within this layer surrounding the meathouse as was the case during Garrow excavation).

Material in the mound around the rest of the icehouse similar to those two units but not the same.

NOTE: Geile & Bell find no buried topsoil as yet in their units (Hypothesis: was area V+VA+VB terraced as Wheaton believed area I was? Would explain absence of buried A.).

5221 E 276:

11/17

Only 1/2 the unit held surburden of reddish orange gravelly material. S 1/2 did not contain this. Bill thinks C layer maybe redeposited ~~area~~ A layer from seahouse.

TOP SOIL
ORANGE A
REDEPOSITED A B
GROUND LEVEL (W/IT A LAYER) LAYERED - minute trace of C

brick + charcoal. ~~Once again~~ A + C had artifact + layer B did not. C - diagnostic = scratch blue. Very distinct layers in area V.

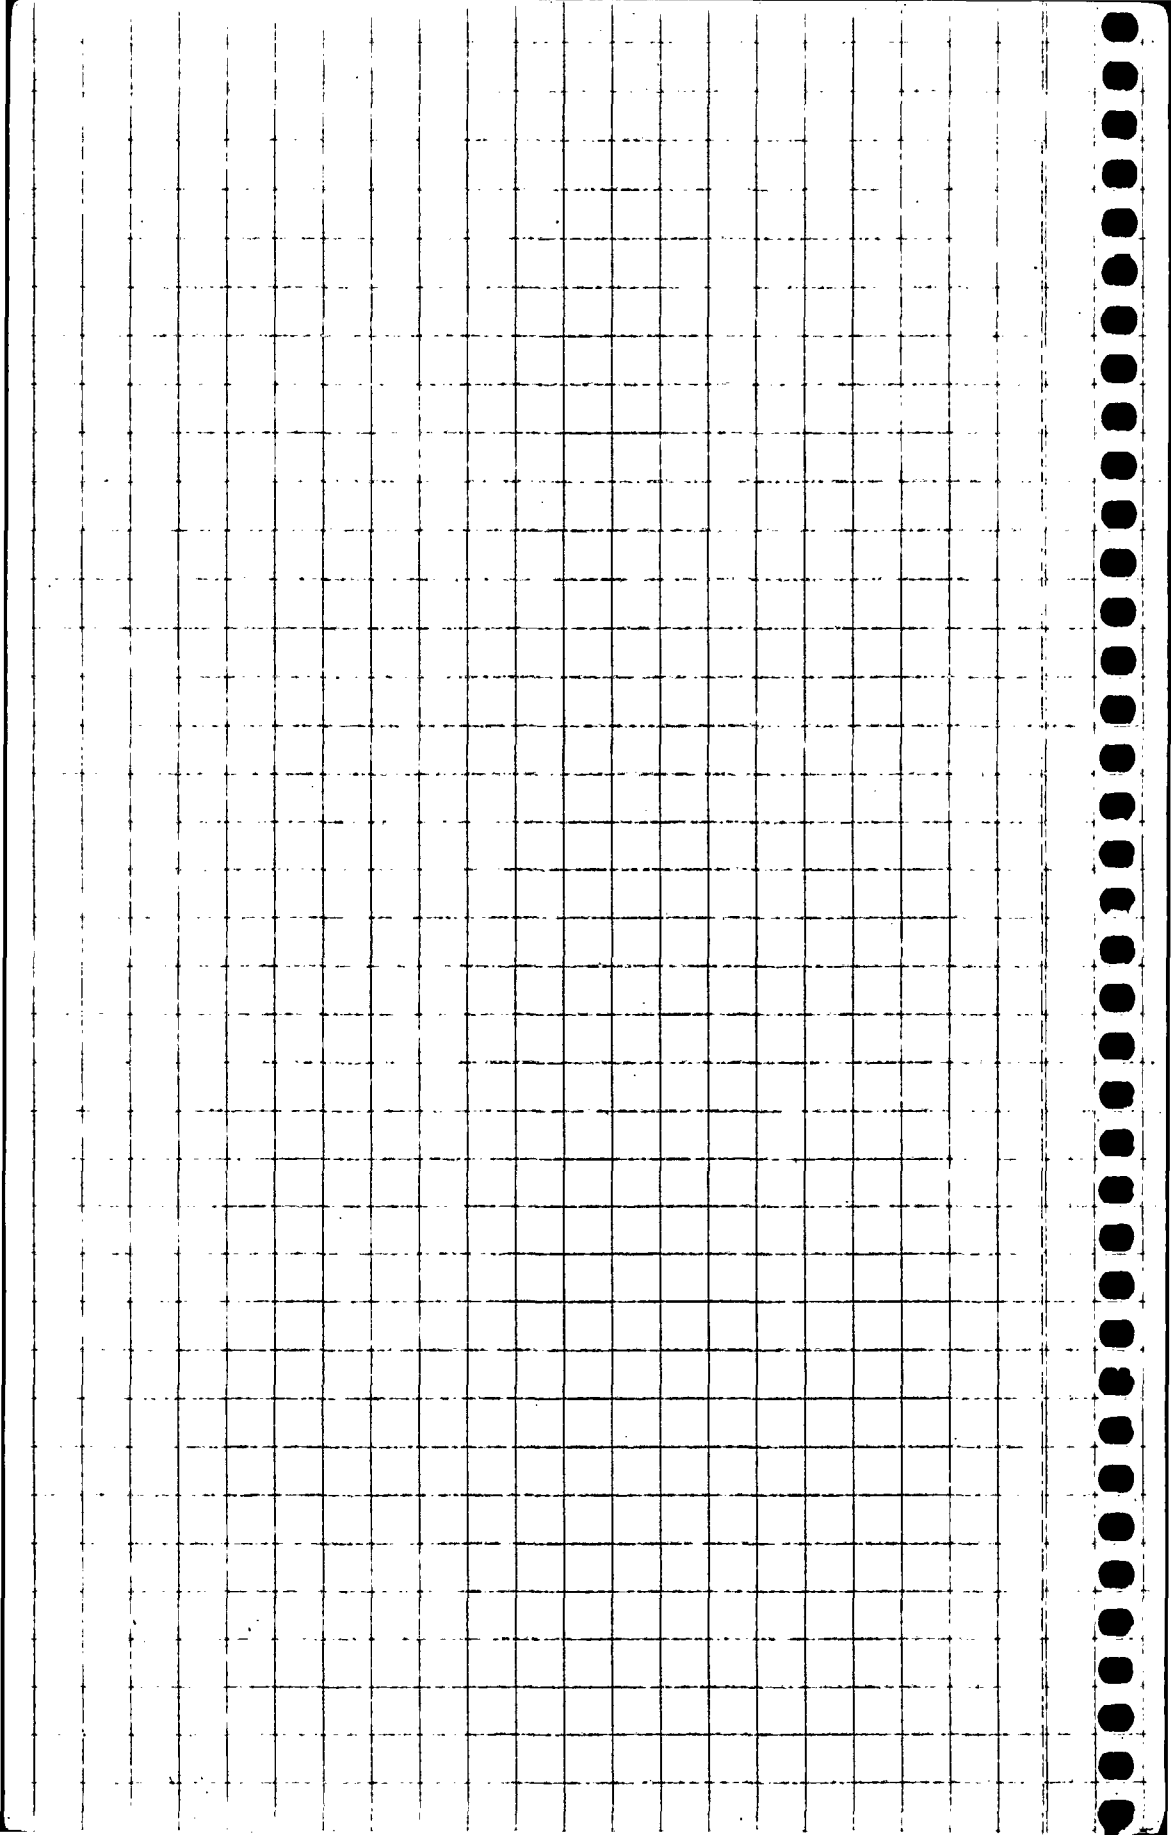

Bright - warmer, 50-55°. 11/18/86

Charles has taken Eric Johnson + Tara Goodrich for one day.

NOTE: call Ken Garray. DON'T FORGET
NOTE: paid Sam \$31.25 per diem - Charles forgot. Get that + \$19.00 from Charles in petty cash - give him per diem slip Sam signed.

Area V:

5221 E 276: found edge of mound around mehouse. Extends across N 1/3 of unit. Soil beneath is a greyish soil with tiny brick and charcoal flecks. It is the same layer the meathouse edge in unit 5217 E 272 was located and in which the apparent edge of the brick structure to the east was located in the E 1/4 of

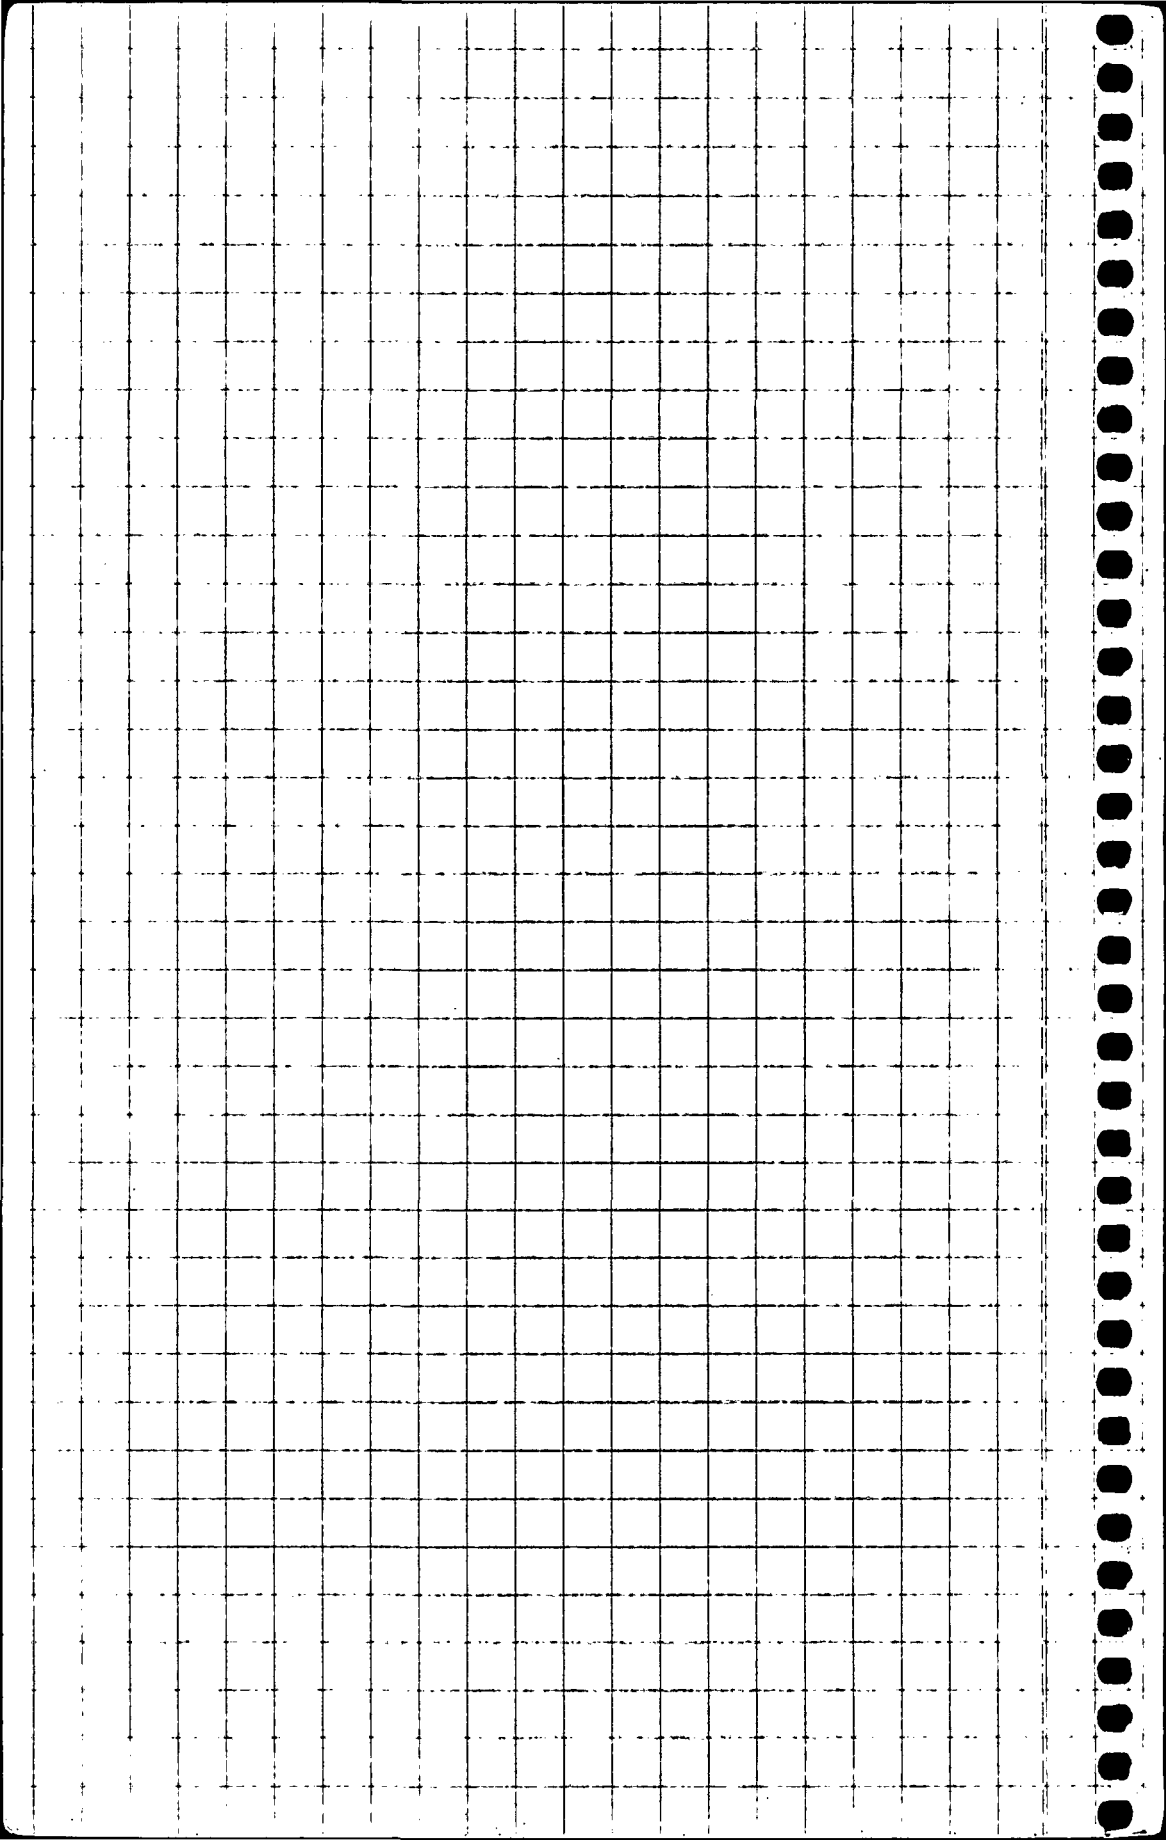

S218 E277 was found.

11/18

In S221 E276 the grey soil is being removed as it appears to contain no features. So far not many artifacts recovered from this layer. — Questions: What were the three structures functions. When were they built and used. Are the "meathouse" + brick structure contemporaneous or are all three structures of different ages?

ANSWER: to one question. According to stratigraphy the icehouse is the most recent construct.

Area VB: appeared in unit S214 E308 — a very dark stain covering $3/4$ of the unit from the N to S and a more broken feature (mottled w/ subsoil across to S $1/4$). which makes me believe we have the inside to outside of a structure here. In Betsey previous 2x2 S214 E306 all features are separate and had small artifacts (one handblown dark green bottle lip + neck, one clear glass bottle lip (more recent) and one spoon) scattered across surface. These are discrete exterior features, I believe, beyond the structures edge. The NE corner of the feature seem to appear in Mike's 2x2 S212 E310 & extend into

5213E310.

"/18

Question - do we have a single small structure with numerous yard features surrounding it?

If so what architecture was used on structure. What century was it in use? Is it a deer cabin or storage facility or service building? Also noticed conglomerate to the SW of area we have gridded similar to pad in Area I feature 6 (Garrow) in center of cobble feature. To west Charles also noted what appears to be a cut stone. Are there more features here than we think? How long will it take to excavate?!

Jeff Snyder, Jeanne Ward. 11/19/86
Crews.

Betsy Grove: VB

David Mallett

Pat Mirth

Eric Johnson

(Diana Vaneh out through Friday).

Mike Stunt:

Linda Hara

Tara Goodrich

George Germaine

Sam Ackerman

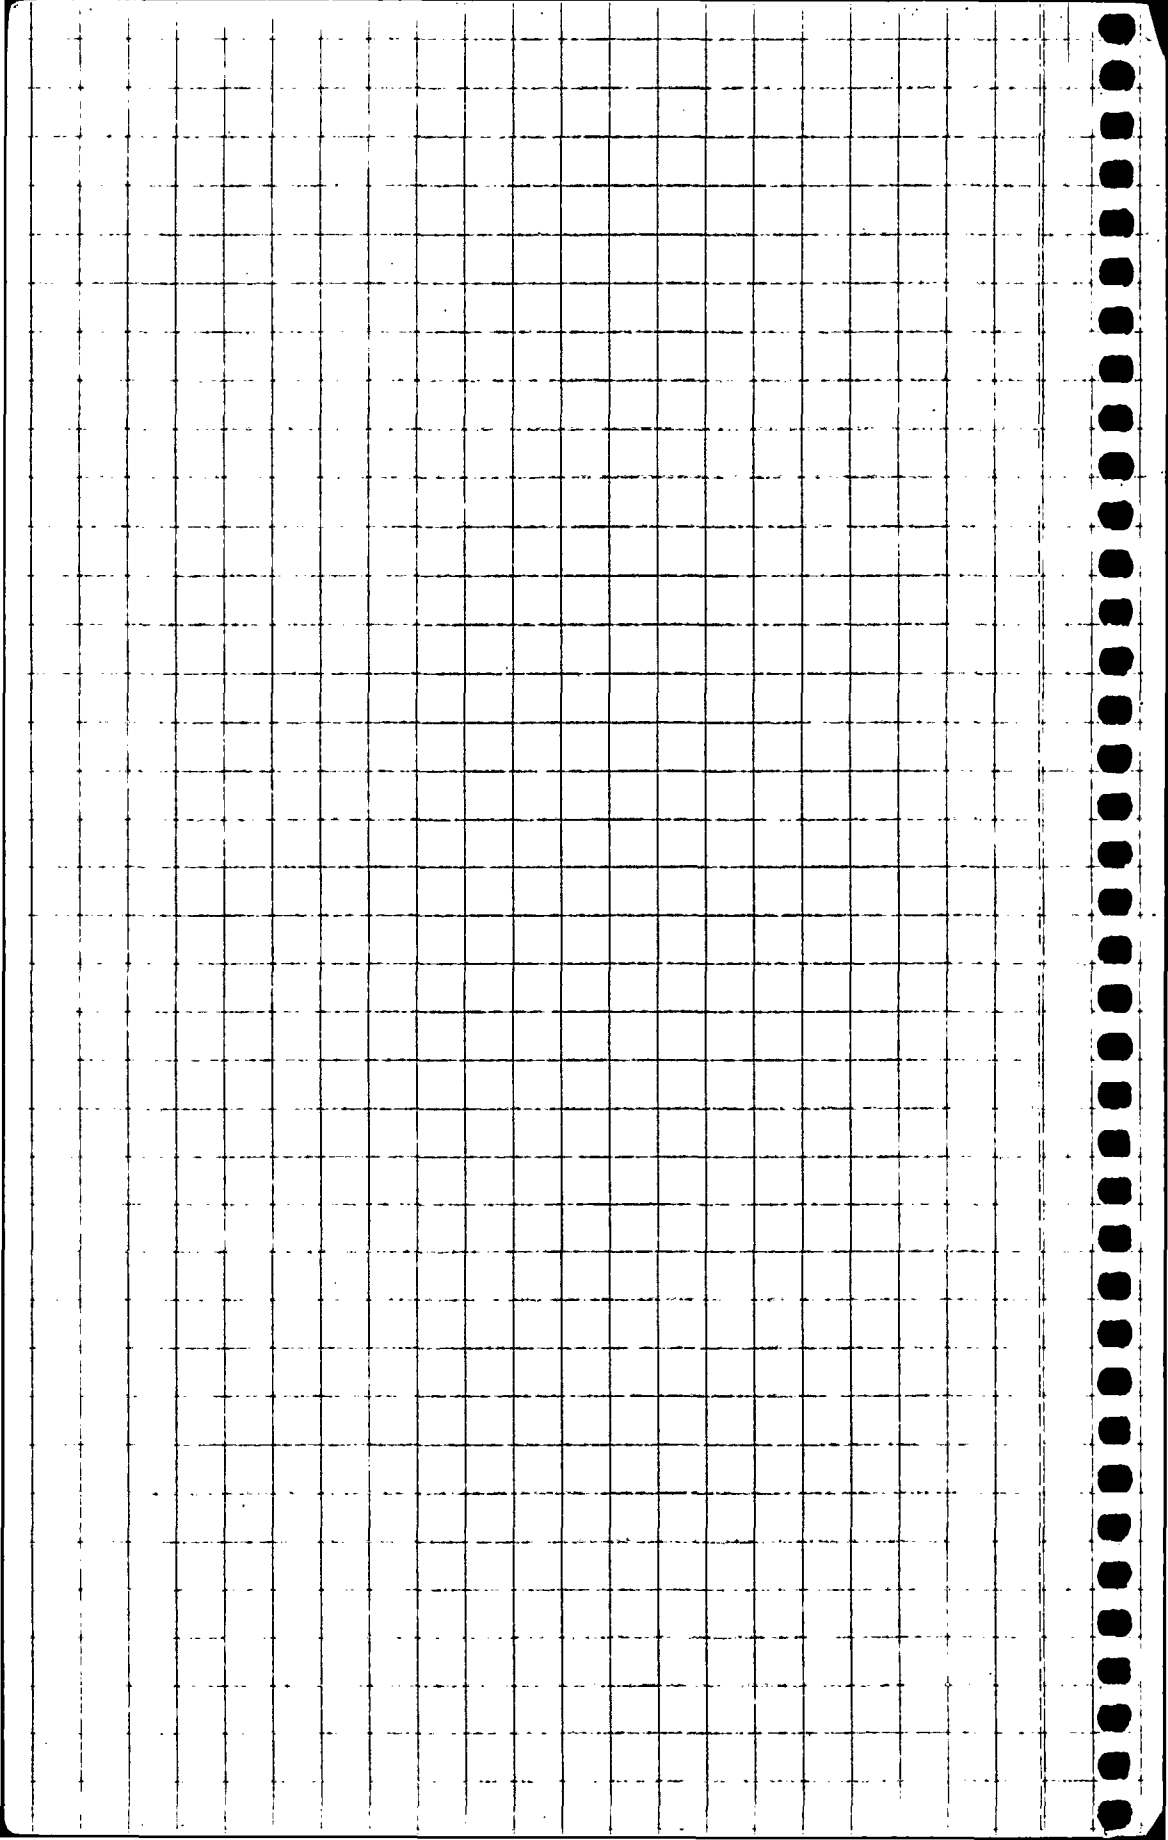

Bill Ronlette:

Mark Wood

Norman Little

Mark Franks

Becky Roman

Cecile Glendenning:

Doug Dicks

Bill Huser

Mike Robichaud

Ans Davis (out today,
Pri appointment)

Cld & clear w/ winds.

Crew chief meetings will be in trailer at lunch.

No sign of well man in A.M.

Area VB: Excavations continue around large feature (possible structure). Outline is unclear to the west - stain seems to scatter in that direction in 2x2 w/ Betays individual features. To north are a number of plow scars which seem to intrude on the structure. Hope to define its borders today. Looks like it will have large # of associated features in yard area to W + S. Plow scars to N. Unknown as yet to east.

Farther to W are concrete & one apparently cut stone.

Do they belong to some as yet undiscovered features? Need to check.

Area V: Bill R. defining outline of "brick house" and border of "house." Now know that stratigraphically the "house" is

1

the most recent feature as the mound
around it of spoil from within
overlaps both "meathouse" & "brickhouse"
Bill will define border of brickhouse
Cecile will define meathouse &
yard area. Will find in SE
corner of front of meathouse
still intact at very edge of
icehouse or if has been cut by
icehouse. Jeanne has given all
of these feature #'s. Meathouse has
one # w/ 3 letters - A, B & C for
builders bench, wall, & interior
fill. Also hope Cecile will define
doorway & associated debris.

Area VB. Talked w/ Mike Strutt:
artifacts in his mind appear to
be 19th century including glassware.
In both Area VB & V Mike & Bill have
located 1 each each which may
be colonoware.

11/20-21

Jeanne Ward

Betsy Grove:

Eric Johnson

Daniel Mallett

Pat Muth

Diana Vaneh (returns Monday)

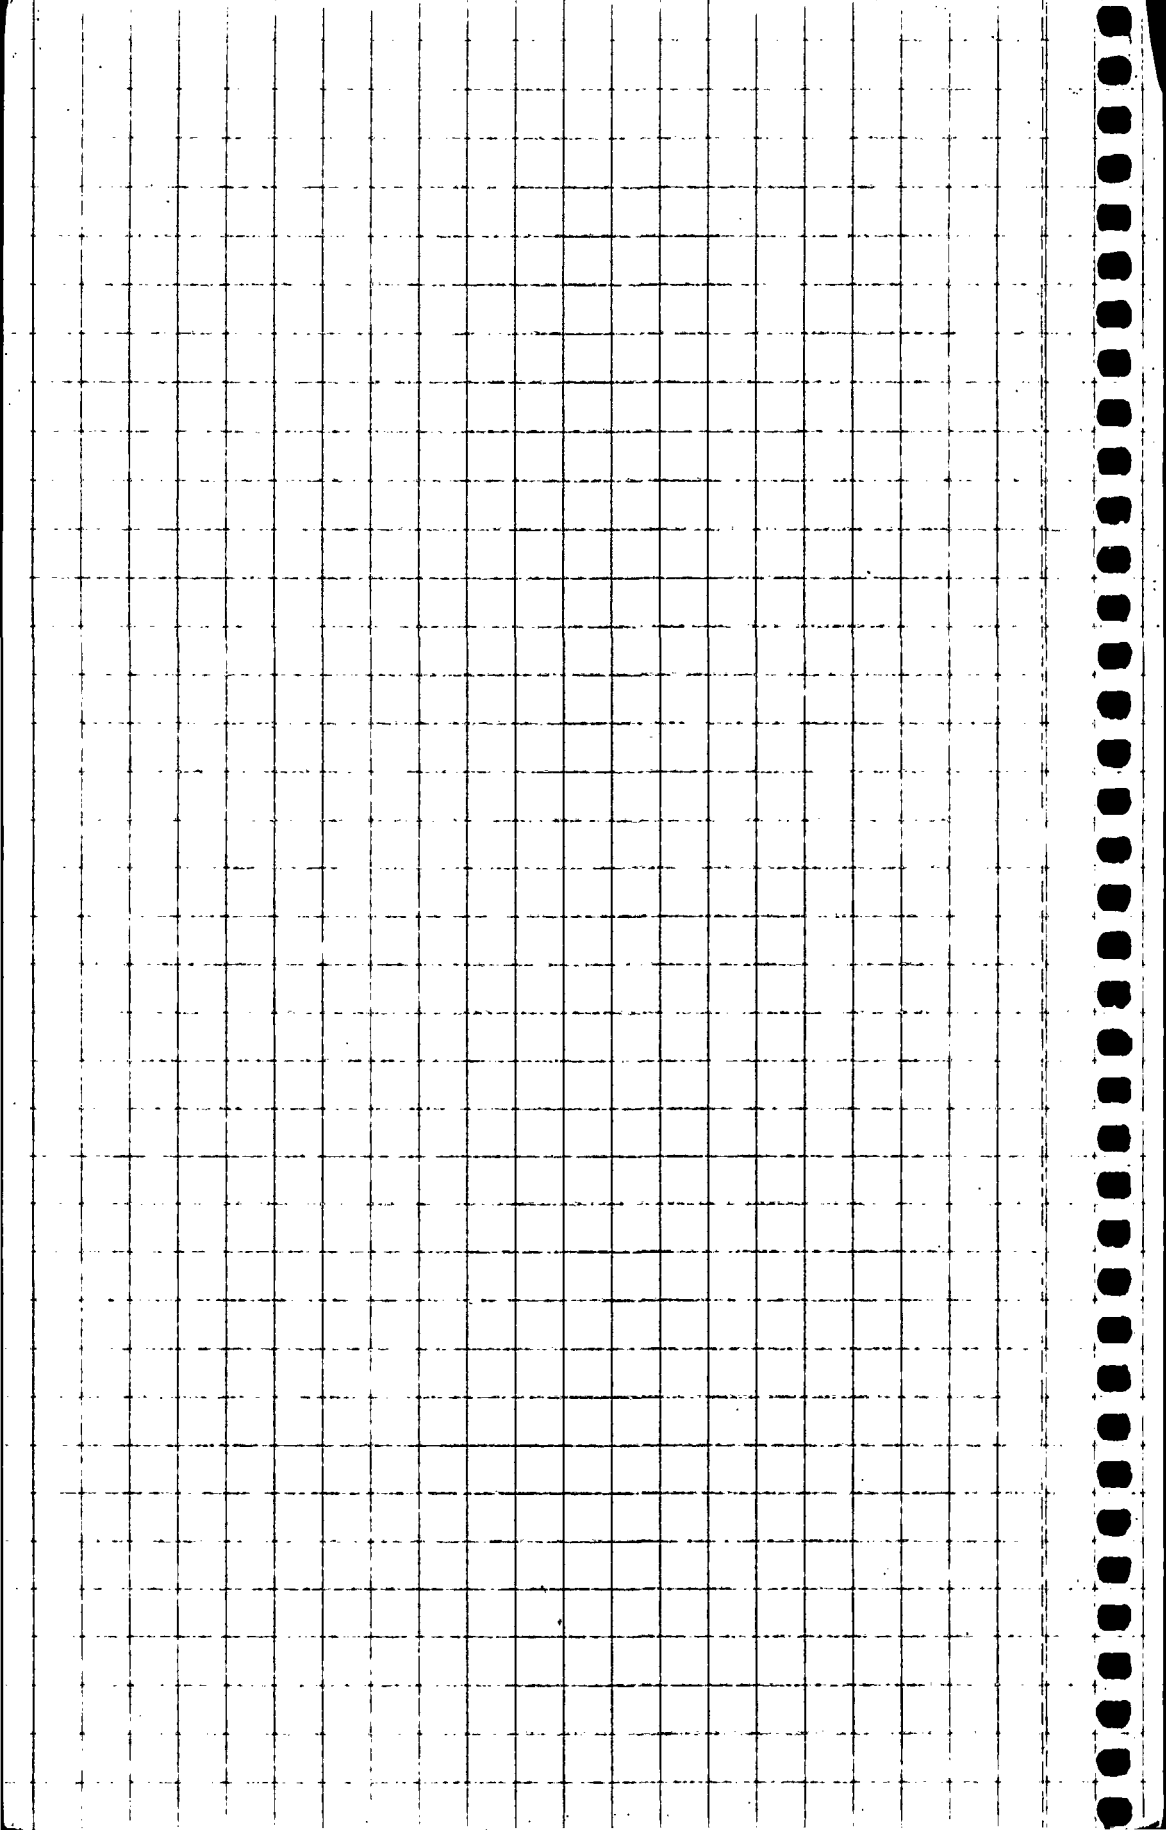

Mike Strutt: (1 hour late 11/20 w/ broken radiator)

George Germaine

Sam Ackerman

Tara Goodrich

Jinda Hanna

Bill Roulette:

11/20-21

Mark Franks
Becky Roman
Norman Little
Mark Wood

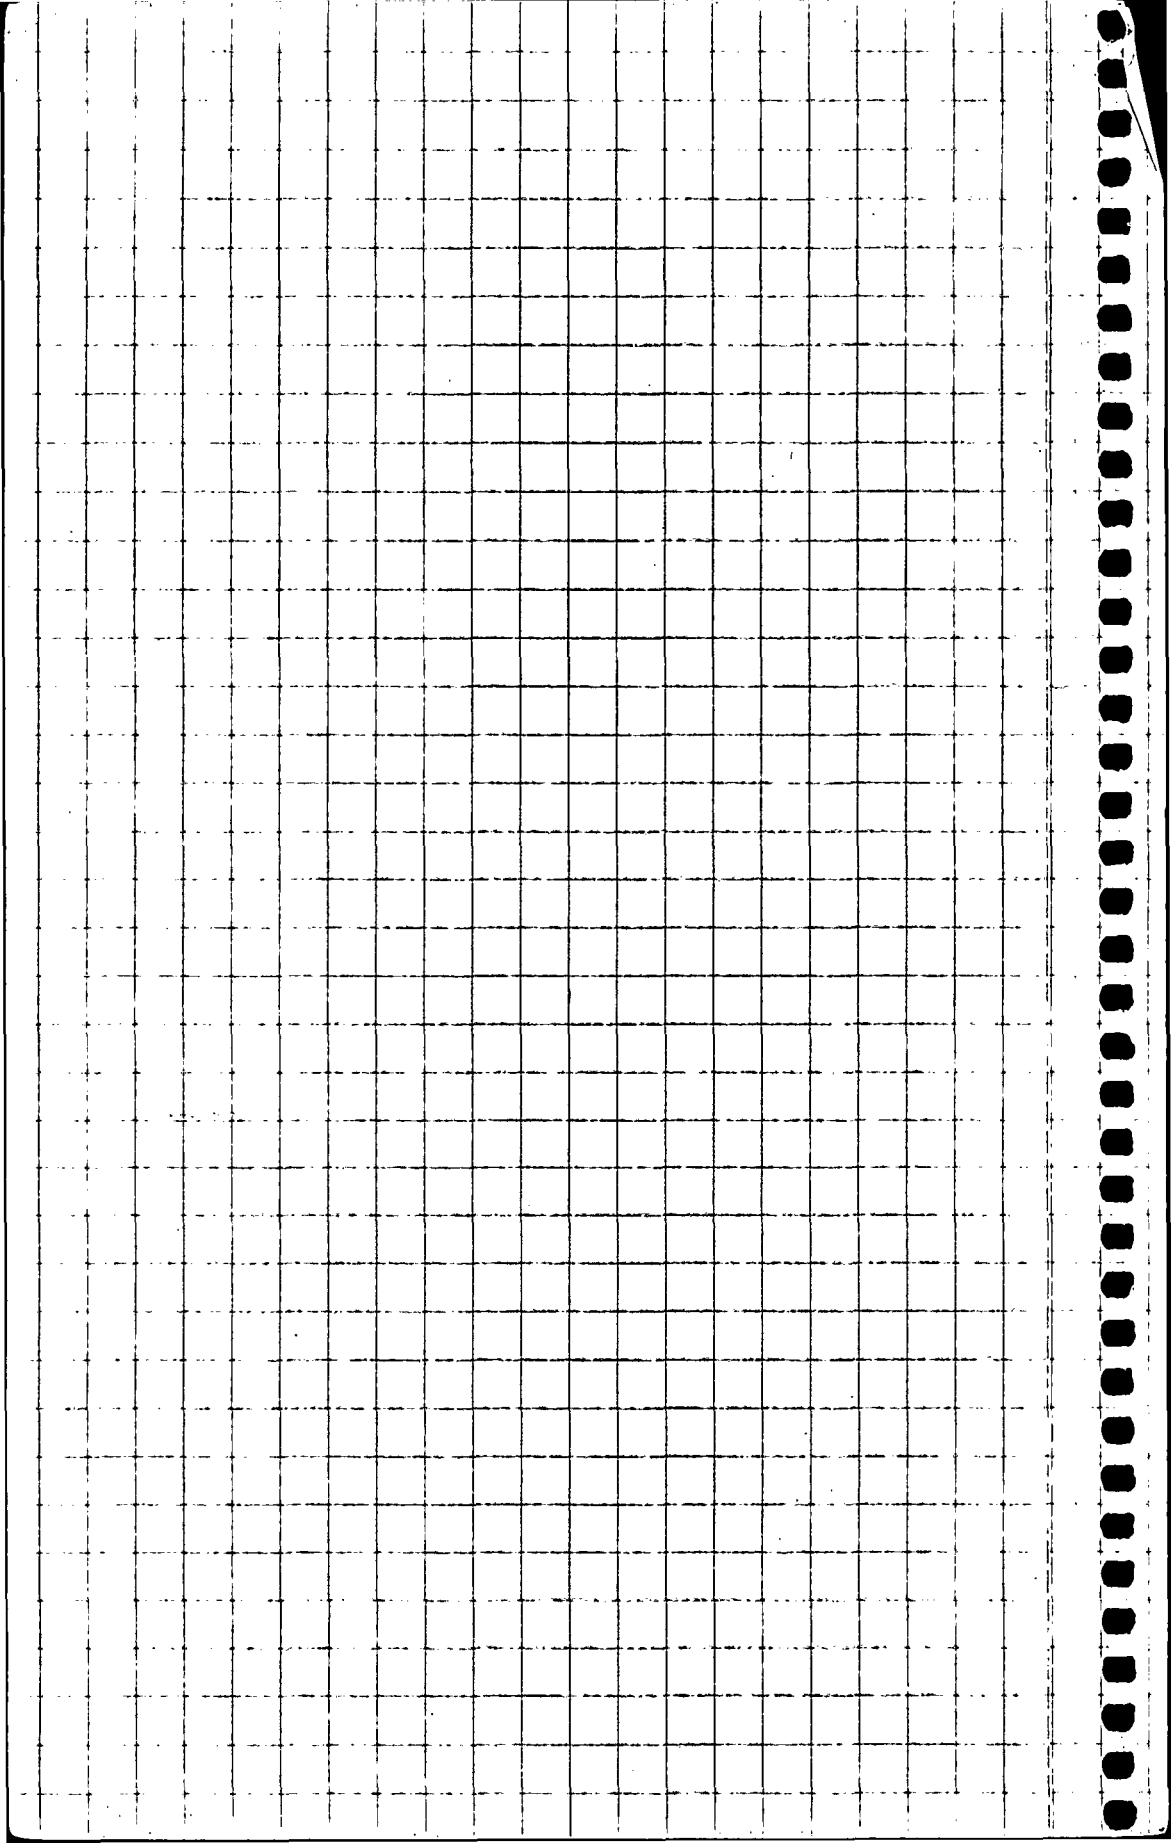

Cecile Glendenning:

Doug Danks
Bill Huser
Ann Davis
Mike Robichaud.

11/20 Rained out at 1:15pm. This work for crew. Jeanne + I ran to get wheelbarrows, turn in time sheets, etc. Spent full 8 hour day at this.

Units continue to be opened.
Bill R. opening all of the brick house feature. Recovering many unburned buried nails in good condition. Discovered nails were of all types from flooring to wall board to lath nails. All types which would be found after a fire which would destroy a structure. Other possibility is debris was brought from another area + piled here for burning but I don't think it likely. Dating to late 18th + early 19th century. Some possible colonoware or Spanish olive jar frags. recovered.

11/20 Mike Strutt + Betty Grone "washed

out" of 6x2 area they had "tr.
exposed w/ the large rectangular
stain (gray w/ charcoal + ash) +
scattered feature beyond. At western
end of feature was a different sort
of feature fill which may or may not
indicate the presence of a fire
place.

Very windy, overcast + cold today.
NOTE: Mike Strutt + I both having
troubles w/ Sam Ackerman. Sam
getting monthly and also trying to get
more money out of me w/ cash advance
I have no knowledge of. This ~~that~~ has
got to end!

Mike + Betsey moved to south west
and west corner of 2x6 to expand
and break down potential
yard features. Also to allow soaked
2x6 area to dry out.

→ CREW AVAILABLE FOR DAY AFTER
THANKSGIVING! (FRIDAY)

TARA GOODRICH

13 people
so far.

WON'T KNOW ABOUT NEW

FOLKS UNTIL NEXT WK.

Appears that southeast corner 11/24 of meathouse is also posthole construction so... what is southeast corner? Is it a repair job from a rotten post? to support the vertical corner post or is it there because the ground sloped downward at that location? (i.e. couldn't sink post because ground too low compared to remainder of area).

Getting babcat Monday. I will drive. Unknown if it is diesel or gas powered.

NOTE: NEED TO FIGURE AREA OF THE BRICKHOUSE. HOW BIG + DEEP IS IT? HOW DO WE APPROACH IT? DO WE TRENCH IT ONLY? Also from brickhouse a ornamental piece made possibly of enameled metal. Maybe furniture or house decoration. (rack)

Well drillers finally here. Say something stuck at 250'. Now what?!

11/24

Brick house 7m wide

12m long

1.5m deep.

$$\begin{array}{r} 12 \\ 2 \\ \hline 34m \end{array}$$

$$\begin{array}{r} 28 \\ 34 \\ \hline 11.5 \\ 170 \\ 34 \\ \hline 51.0m \end{array}$$

Bill Husar (bobcat)

Bonita Rose

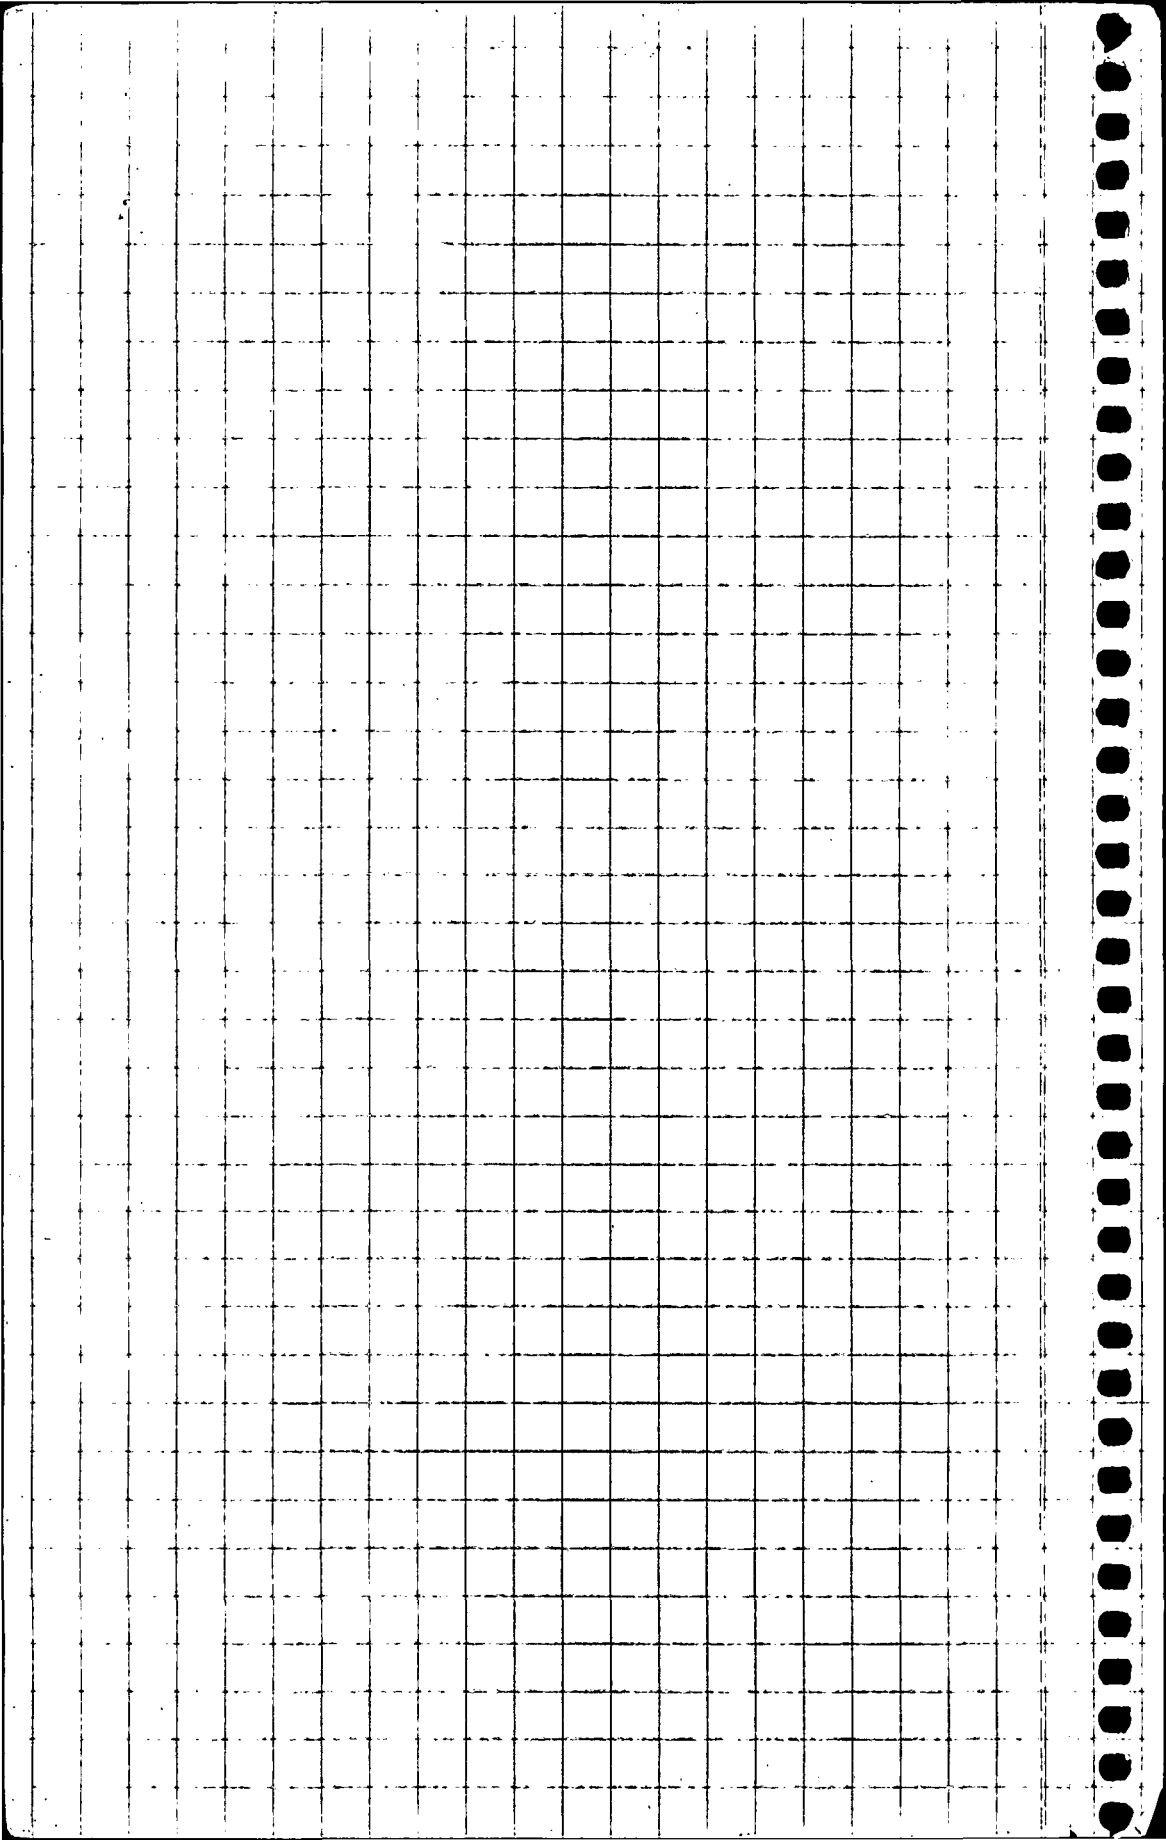

11/24-28

South of the brickhouse feature
in area V a cobble drive (?) or
walkway (?) has been uncovered.
It runs east west and is extending
further into the western units
along the southern boundary of
area V. It may be a portion of
the teardrop shaped drive in
front of the house or some other
path or drive. It may also indicate
that the entry way into the brick
house was along the southern wall
of the building meaning it was
meant to be preceptable along the
main drive to the house.

In third row of units in area
VB to the south first unit opened
to stretch of features w/ the exception
of several plow scars running
east-west and one old shovel
test. May also have second
structure to west. May have
line of buildings in a row
facing the main drive. Small
structures.

V+VA - brickhouse. With at least
126 cubic meters of fill to be removed
best choice will be to trench the
feature w/ a 1 meter wide trench
north to south. Maybe also
east to west.

Area V - meathouse will be completely

excavated. The inhouse 11/25
should also be completely
excavated. Basically have
more work than crew available.
With smaller crew, however,
may be able to work longer.

NOTE: Mike Strutt's crew to be moved
to Area I A tomorrow or the next
week (Thanksgiving practically ends
Thursday + Friday - will work Friday).
Maybe move Mike's crew in Friday.

Billy Ray attempting to locate
northern boundary of Brick house.

NOTE, Med to get dates for features
if possible ~~in~~ in all areas!
Betsy says of the 2 large dark
stains the one to the right dates to
late 1700's. Mike believes left hand
large stain w/ smaller square
feature (which may be a posthole)
dates from 1800's. Betsy thinks Mike's
dates are a little late. Believe
both of these large stains may
be structures lined up in a row.

Clearing area I A with the bobcat.
Cris Johnson, Tara Goodrich, +
Bill Hauer make up the rotating
crew. One drives, one watches +
guides, + third person digs with
regular crew. Order rotates every

wet weather - some haven't 11/26
showed. Told Cecile, Billy Ray
Ann Davis not to come. May need to
change this if stays clear. (9am)

People here: WEDNESDAY 11/26

Jeanne, Jeff

Bitay Shore & Mike Strutt :: Crew chiefs

Removing
fall from
Area 1A

which bobcat
is having
trouble with.

quit w/ entire crew at 11:45 AM.

7,50' hoses get check for

275 or 300

dollar.

3 75 foot hoses.

Jeanne, Jeff, Doug & Bob Cochran here
until 3:30 stringing hose.

2 hours to keep things even. Most of fill mound has been removed in this (11/25) the second day of babcat use. Appears to use $\frac{1}{4}$ tank of diesel fuel daily.

NOTE: Sam, Mark Wood & Mike Richardson gave me ~~trouble~~ trouble, saying worked $5\frac{1}{2}$ hours Thursday instead of 5. First problem had w/ Mark Wood.

11/26

Rainy day. A number of people didn't call & aren't on site.

- 4 people inventing ~~the~~ boxes of collected artifacts. ~~the~~ remainder are removing fill in area IA that ~~the~~ backhoe was having trouble with. Mike & Betsy doing paper work. Once Charles arrives after 9 AM will see who can send to get hoses etc & see to setting up water screens.

NOTE: Becky staying in apartment area early contradictory orders from Jeanne & myself. Probably won't come out. But, in her favor, did keep civil tongue. Does have a point.

Managed to keep full crew (as many as we had) excavating area IA until 11:45 AM. Myself, Jeanne, Bob & Dolly had bus across the Ravine by 3:30 PM. Poured down rain from 2:30 PM on.

M, Janne -
Betsy Shaw:

FRIDAY

11/28

~~Chas. Shaw~~

Bob Cochran
Bill Huser
Eric Johnson
David Mallett

Mike Smith:

Tara Goodrich
George Germaine
Linda Hanna

Bill Roulette:
Becky Roman.

(13)

Mike Rolichand arrived at 10:00
Am.

(14)

Small crew the day after 11/28
Thanksgiving, 13 people.

David Mallett, Eric Johnson are
working on getting the hose
better strung across the
ravine.

Bill + crew are now opening
units ~~to the~~ on the east edge
of the brickhouse feature in Area
✓B. Seem to have located eastern
edge. Looking for NE corner.

Monday - 11:30-12 or so the
director of strip mining + his
assistant will be here for a tour
of the site. May come a little
later. If he does we need to take
lunch in 2 shifts so 1/2 the
crew will be working whenever he
arrives. Charles will provide tour.

→ Artifacts from brickhouse feature
appear to be 18th century w/
rosehead nails, scratch blue ceramics +
deft. May border between 18th + 19th
century.

Area V - the relationship between
the meathouse, icehouse + brickhouse.
Both the meathouse + brickhouse
have a layer of soil overlying the
structure + between the structure
+ the fill from the icehouse. The
soil overlying the meathouse

CHRISTMAS:

appears thinner than that over 11/28
the brickhouse. (Less time between
filling of meathouse + construction
of icehouse than from the
brickhouse + icehouse.

NOTE: need to run comparison of
wet + dry screening. If soil
is screened into wheelbarrow by
dry screening + then is waterscreened
+ no new artifacts (or very few)
appear can probably have good
excuse not to water screen.
Need to check.

12/1

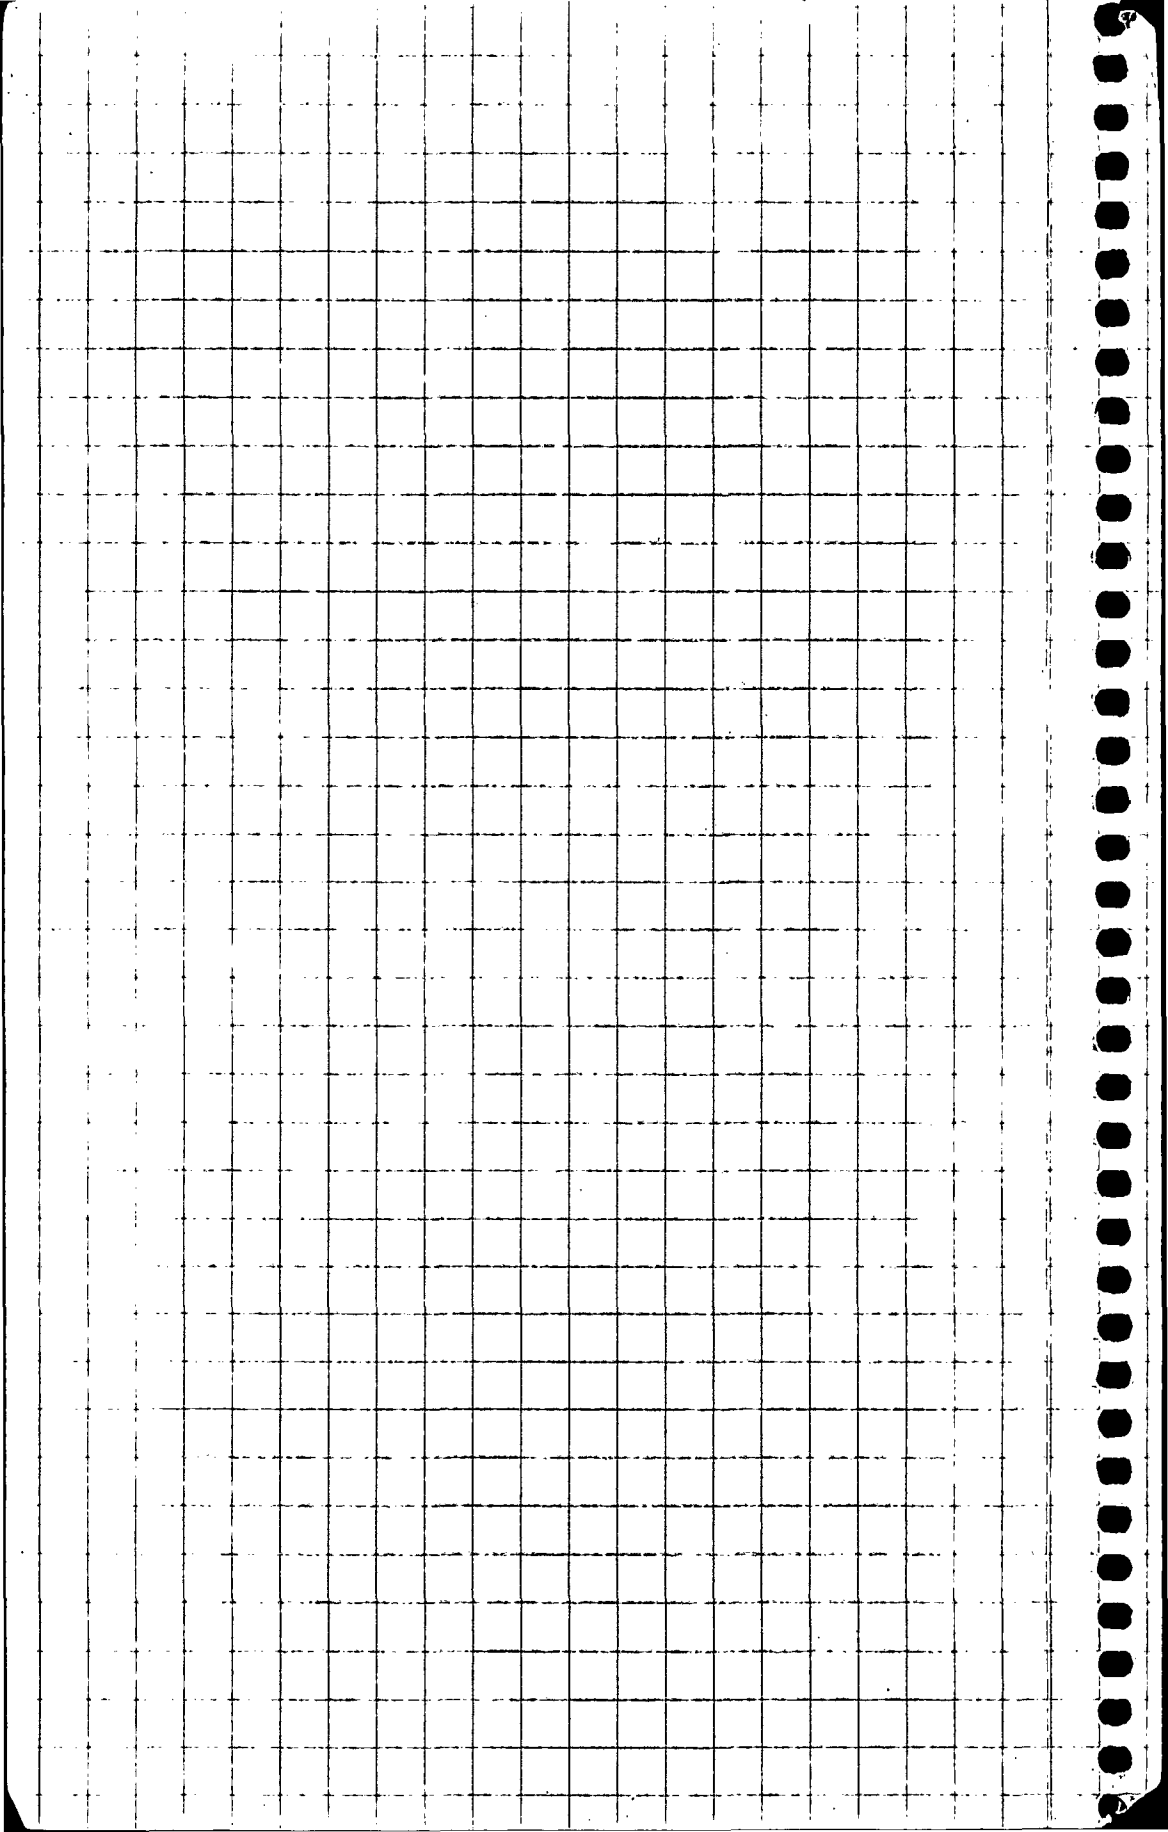

Three new crew:
Peter Morrison -
Raymond Tubby -
Susan Wetzelner -

12/2

Bob worked 4 hours today. Rain
day, no one else except Jeanne +
Me + Doug (Doug 2 hours, Jeff 6, Jeanne 5).

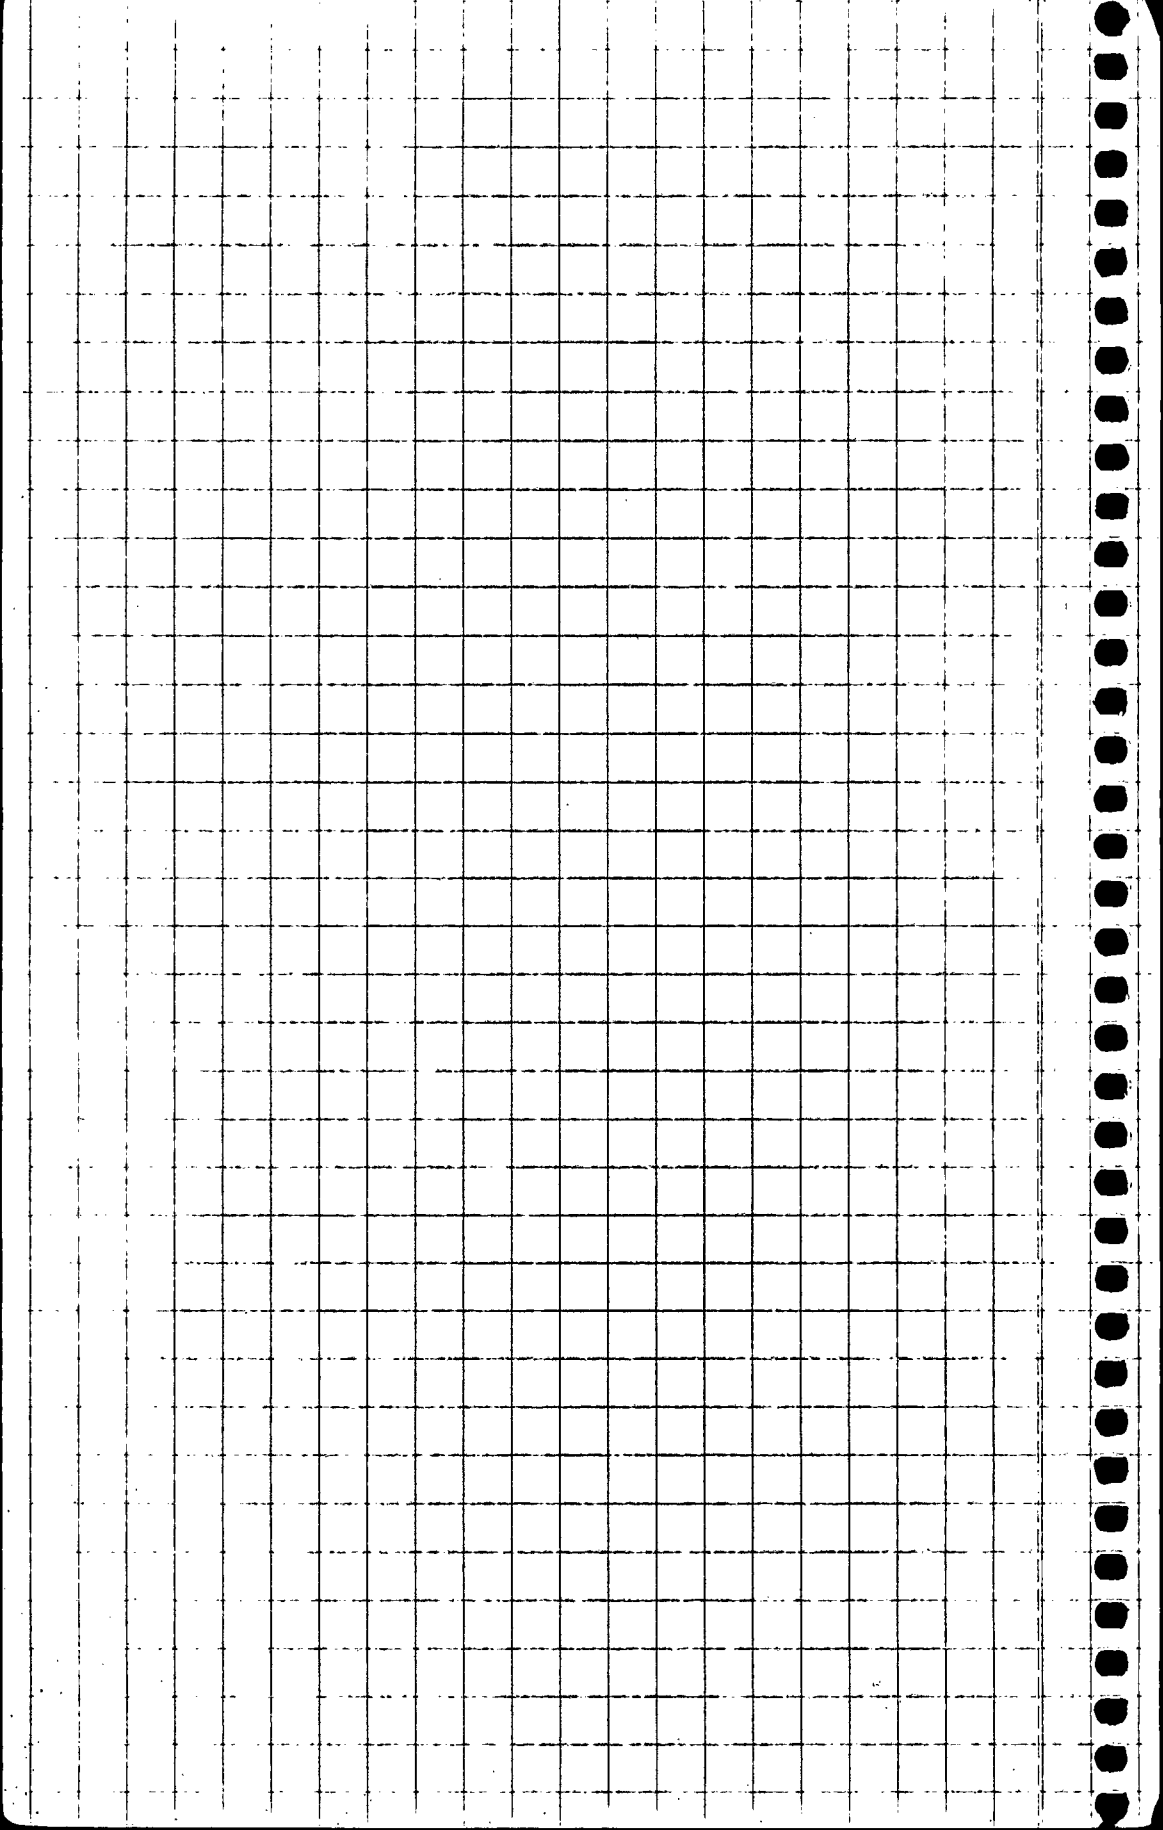

12/3

Rain in the very early A.M. until
9:15. Worked all day anyway.
~~In the afternoon opened area IA~~
Work continues in all areas.
Setting up area IA for
excavated starting tomorrow
Have little to say about the site
as spent most of my day trying to

to get water across our 12/3
1700 feet of hose from Oxon Hill
Manor & the fire hydrant
George Prior is letting us use
the site. The pump & generator
don't help much as the hose can't
provide enough water for the
pump to force to us at any
greater volume than it is. Appears
to get ~~starts~~ slowed down in
the last 50' rise to the terrace
below the cemetery. The Manor
home must be lower than
our side of the ravine.

12/4
Mike Skutt & Cecile Glendenning moving
into area I A. The Layer A consists
of the ~~the~~ destruction rubble from
the manor house fire of 1895. It includes
brick, mortar & ash. Artifacts are
few and far between - mostly nails
~~fragments~~ and one hinge that I've seen.
The rubble is being screened
(order protest) - dry screened. The
surface layer is orange clay -
similar to the material
in area V around the manor house.
Units are being opened beginning at
the southern edge of the area -
~~exposing~~ ^{opening} the foundation wall.
From there they will move north.
The rubble is being removed and
screened in 2x2 meter blocks.
1x1 units will not be used in

Area I A until all the rubble has been removed from the unit. 12/4
(NOTE: north wing [McCarthy statement] may have been kitchen as many have been cellar. Need to keep an eye out to prove or disprove this.)

Area V + VA:

The brick house exposure will now all be referred to as Area VA. The meathouse above will be Area V. Cecile + her crew are moving slowly out of Area V into Area I A as they finish the work they are completing in the meathouse location.

NOTE: Garrow hypothesized an arcade around the meathouse from portholes around southern end of the structure. Is this true? Do they align w/ structure? Do the 3 around front we have found line up w/ structure or not? (I think not. Check it out!)

Cecile has made profiles as of today of both sides of the meathouse stratigraphy = Garrow's + ours.

[John here Wednesday + today].

In Area I A around the bulkhead entrance is a small wall going north (east side of entrance) only 2 courses thick. To west is a brick floor along the level of the floor of the bulkhead entranceway. On the west side it is unknown as there is as yet a layer of fill over the unit. (different from ash + brick being removed from units in a 2x2. Beneath that will be excavated as 1x1 in units w/in 2x2.) Within confines of wall (going north) above floor the wall of the foundation is staggered inward about $\frac{1}{2}$ course at a time. Does this to W of bulkhead entry also but not to east of N wall. Actually, not necessarily true — the foundation may all be staggered below the ground surface. Wall going north conforms to the staggered wall. Very well defined line

between foundation wall and where the stair slots are for the breads to the north. Strongly suggest all as an addition to me.

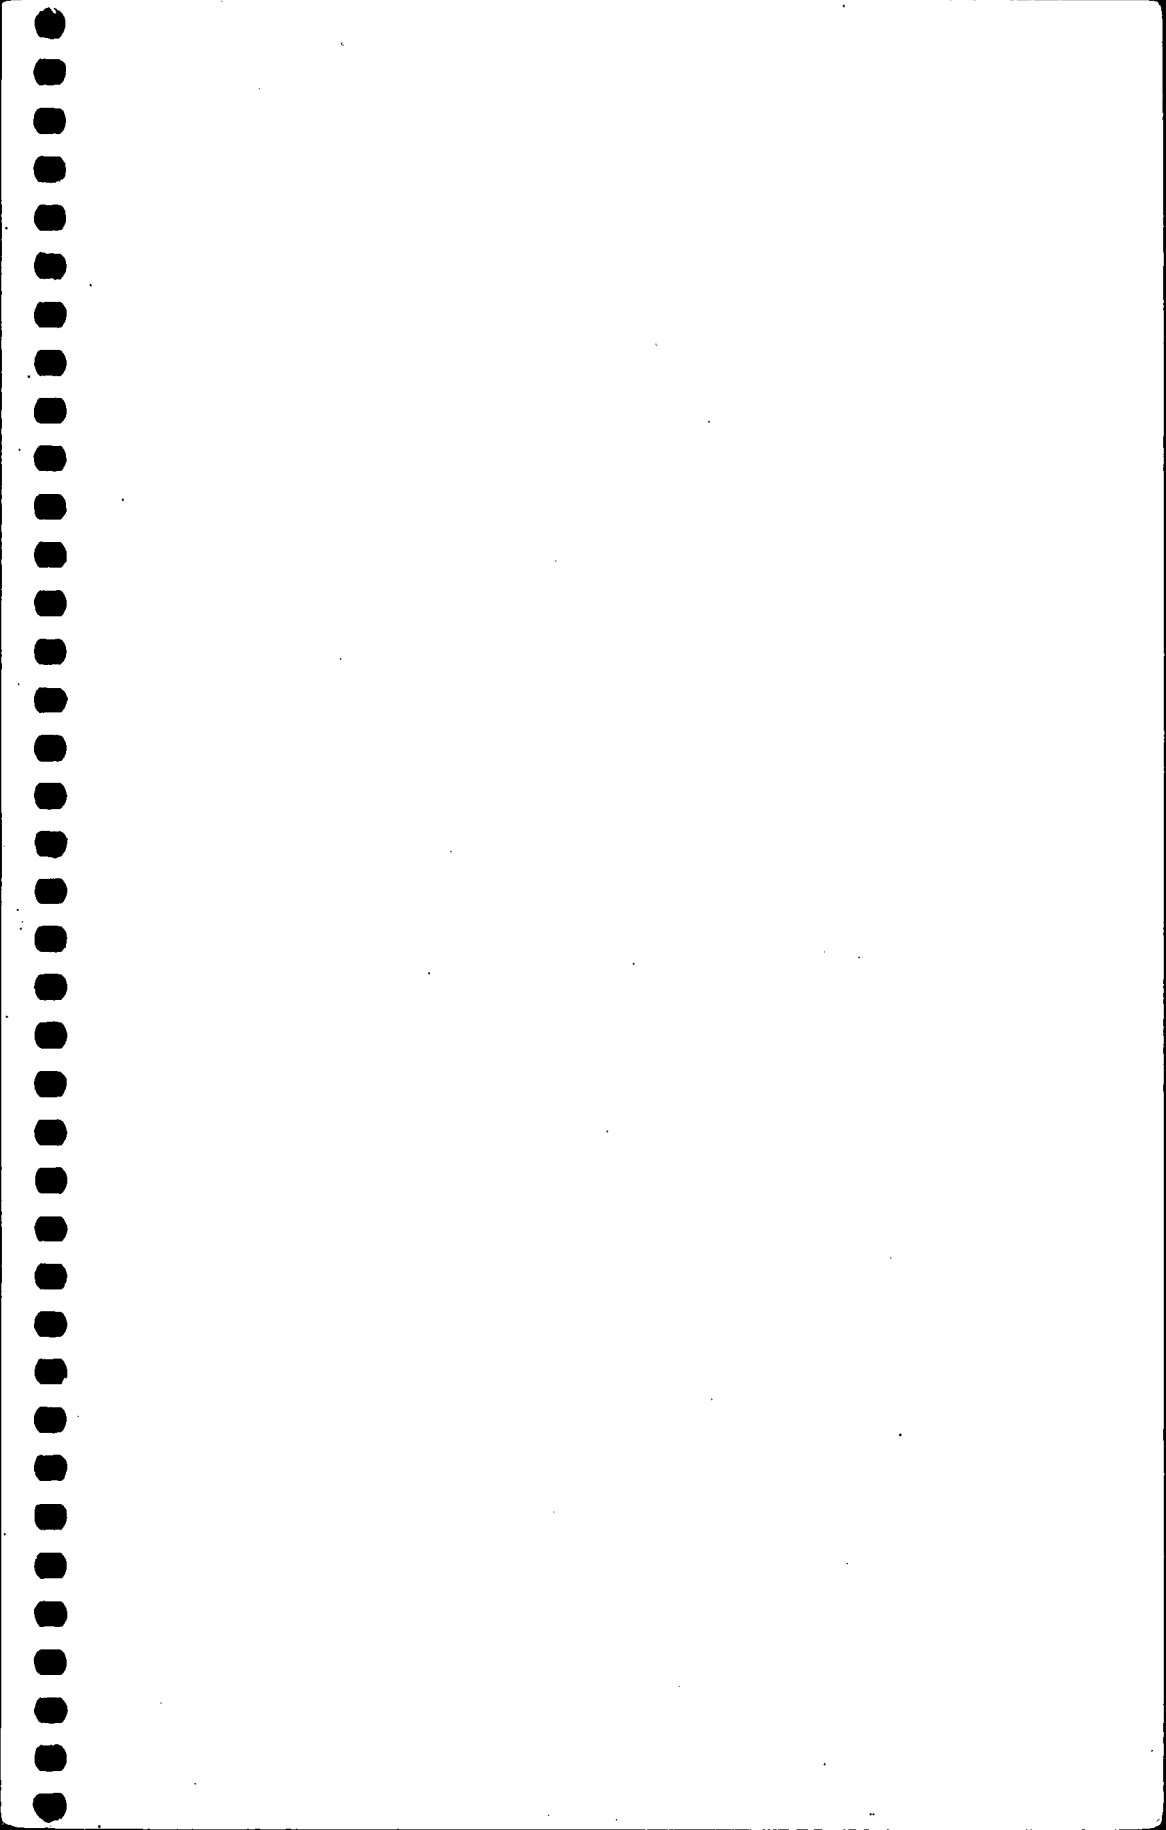

Bill Roulette has taken over the meathouse area while Cecile is in Area IA.

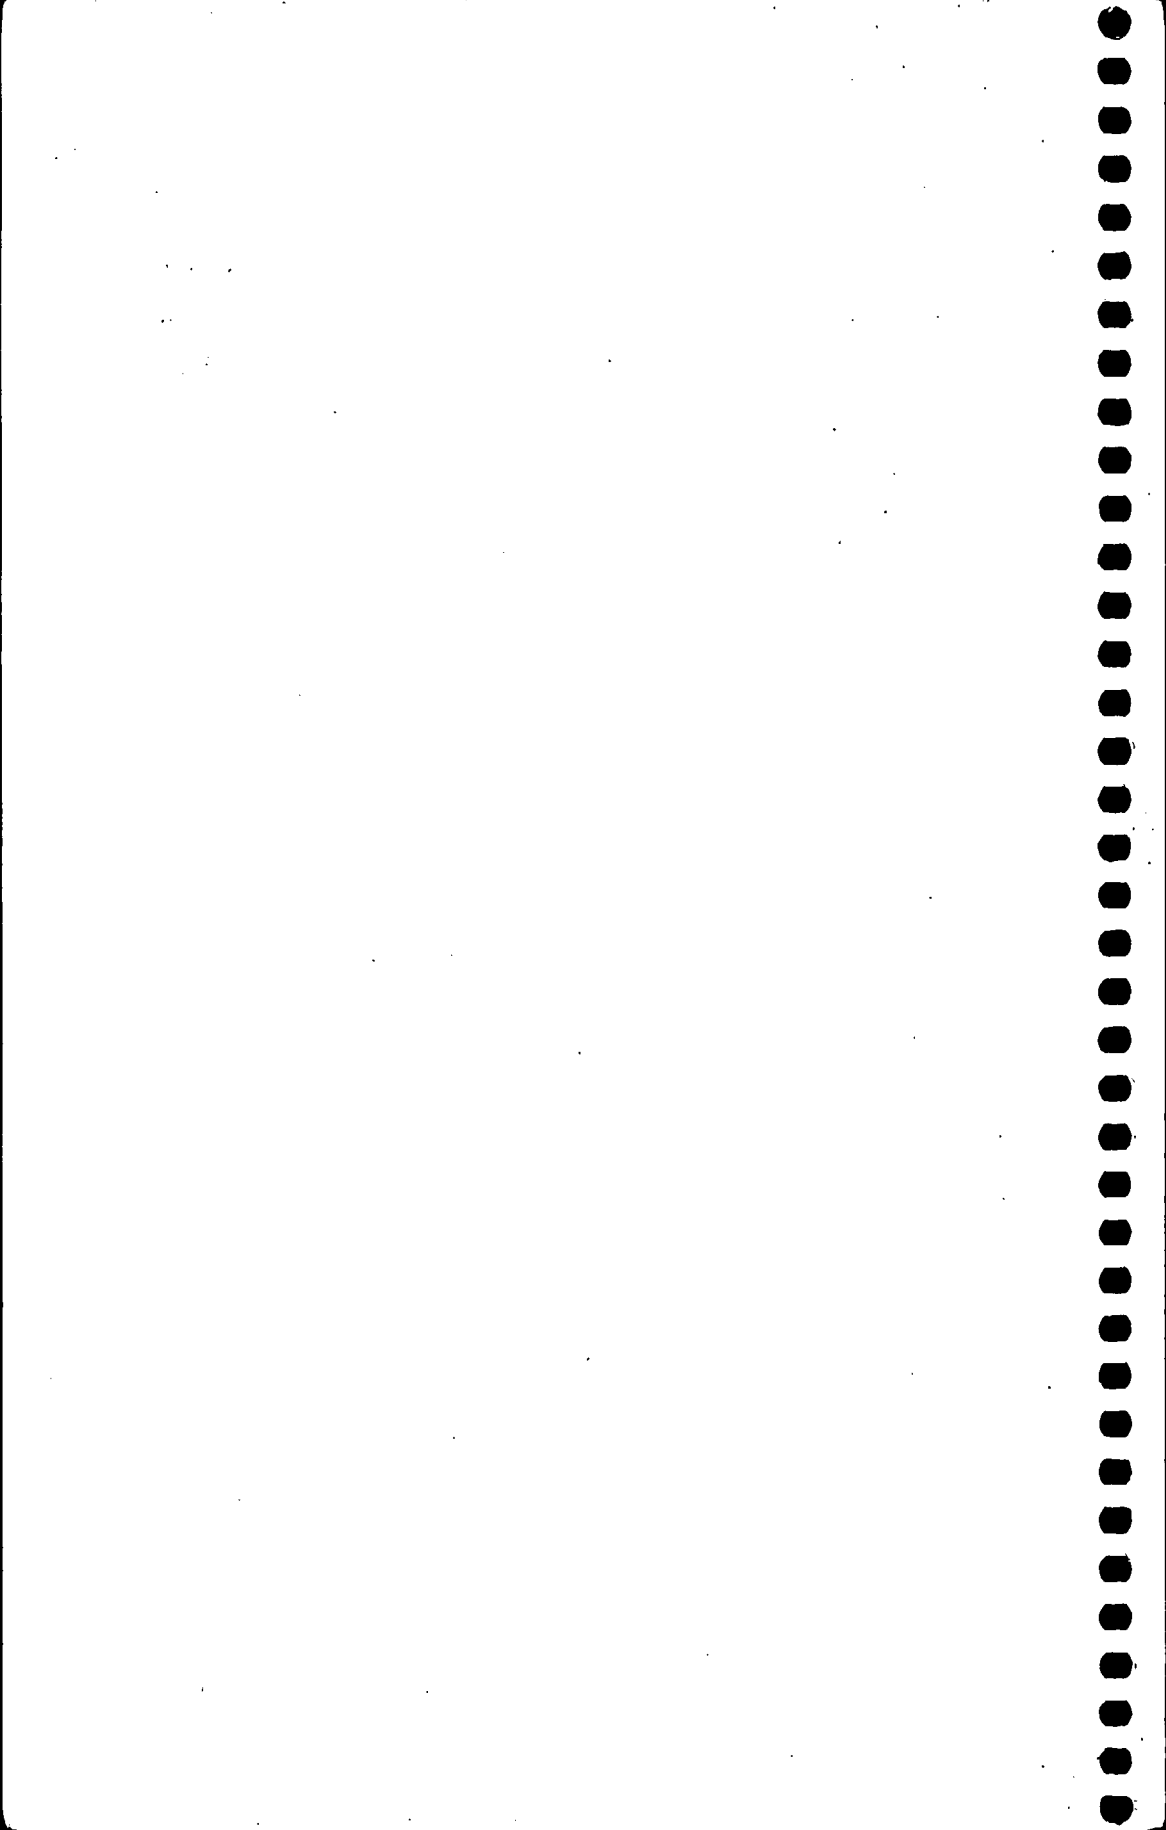

IA. Appears to be a banded wooden sill between bulkhead entryway and floor to the north of addition.

Area VA - the entire brickhouse will be designated area VA even though it extends into ~~IV~~ V. Most all of the brickhouse is exposed. Extends to the SW along the cobble drive no scattered debris. Abuts the terrace to the east very sharply. He will remove 1x5 m units to expose most of meathouse area and the westernmost unit of cobble drive where higher amounts of artifacts & brick rubble were found.

May also be another building on the other side of the cobble drive from the brickhouse to create a flanker for symmetry. There is a depression there and we will investigate this.

In rubble in IA slab found near base of rubble. Very few pieces of ceramics around north wing/bulkhead which include whiteware, stoneware & flint.

Monday:

12/8

Warner - in the 40's w/ threat of
retir for today, tonight & tomorrow.

State of Maryland coming out
tomorrow 11 a.m. Historic Mission
Jodies out at 10 tomorrow.

Pat Mirth still sick w/ kidney
infection. John McCarthy arrives
this pm.

Area VB - trying to define the
easternmost feature by extending
another 2x2 east. Very slow excavation
due to very muddy conditions. Water
runs off of terrace straight into
area. The A layer was removed by
end of ~~week~~ Friday. Taking B off
today. Also taking out 2x2 over
western feature going into wall that
Mike discovered.

Will be dry & water screening
1 complete unit from the 2x2 to
the west to completely prove test
case for or against water
screening. From B layer of ~~2x2~~^{1x1m} it
was tried in previously 14 artifacts
were recovered by water screening.
Many more of dry.

Area VA - Bill Ronlette defining eastern
edge of "brishhouse". Some material
extend up onto terrace edge which is
being removed from 5 units.
One unit done this way previously

+ provided well defined edge of (12/8)
dropoff for cellar. No brick appears
along cellar wall & may have been
robbed during depression. Becky
Roman found a large concentration
of animal bone from the A layer.
Most of them are joints, the
tibia joint. No long bone shaft.
All of them broken, not cut. What is it?
Refuse? Was it broken for bone marrow?

Area V - Route will be moving into
the meathouse area to remove
last unit over the meathouse.
Profiles on Garrow + LMA side of
meathouse have been made.

Area IA -

Large pit near the northwest
corner of the main house structure.
Shallow, takes up a 2x2 unit,
deepest on its southern edge
where it leads farthest down slope.
Purpose unknown. To its west
what appeared to be a brick drain
may be a small structure
foundation. Directly north of
bulkhead addition ~~to~~
appears to be a fallen wall
that Doug + Ann are
uncovering. Similar to one
along west side of house.

From stratigraphy along edge of

SP
52231 STRATIG

ORANGE CLAY

/// = dark loam

□ = brick frags, large

□ = brick frags, much smaller

□ = (empty) ash + mortar.

IA
above the
pit in
NW corner
of ~~wall~~
structure

1A pit the rubble fill appears larger and looser along the top and smaller, finer material closer to the ground surface. Smaller material appears to be a lighter gray. Material darker & includes loam above.

Along foundation wall in 1A have recovered several pieces of hinge equipment which held the shutter against the wall.

Beneath ash & mortar and brick rubble is a clay layer, orange, containing rubble fragments. This is also apparently associated w/ the destruction of the structure and may well cap the ground surface layer beneath.

- Removing fill that was mistakenly deposited in the cemetery.

Rained out yesterday at 12/10
10:45 AM. Returned today at
staggered intervals due to a
certain lack of communication
among some crew members + their
field director.

Rest of today promises to be
cool + clear (partially).

(12/11) - Bob Cochrane and David
Mallett worked until 11 AM.

Area VB is too wet to excavate
in today. Work this afternoon will
be limited to V, VA + IA.

TIME SHEETS TODAY!

Rained all day. 12/11

Jeanne + I + Bob Cochrane +
Betsey Stone were on site to
show Dan + John McC. around
the mud from 11 AM to 1 pm. Will
be excavating features beginning
Monday after talking w/ Charles -
also at the site. * Water screening
will be carried out only on the
little crumbles left in the screen
after dry screening the feature
fill. This will be done with
the one hose and water screen
on this side of the ravine (ravine
approx. 80' deep + ground 15' higher
on this side (approx.) than the other,
here covers 1700' of distance from

of the cemetery to which a road is
attached.)

12/11

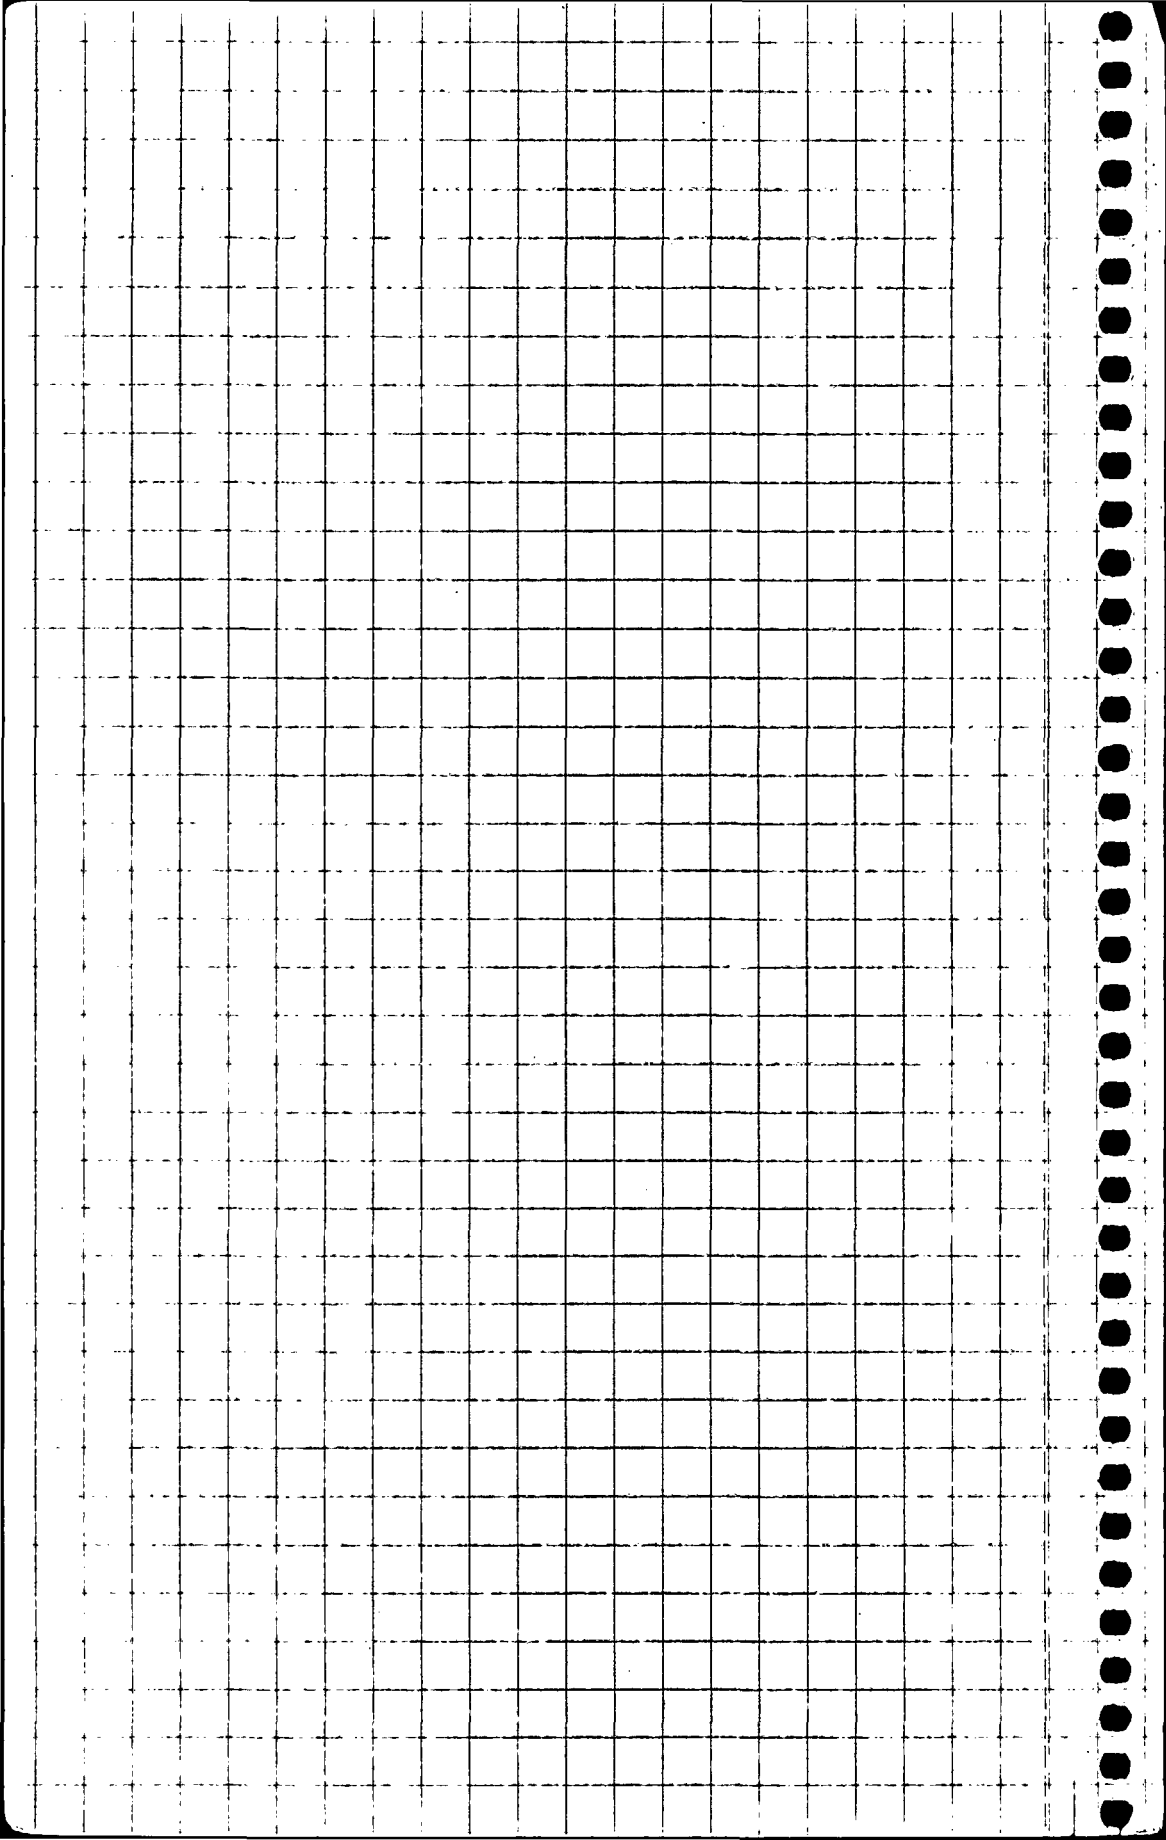

12/12/86

No rain today! 50°.

Area I A, exposed a possible
brick walk along the eastern
edge of the area w/ a pebble &
cobble feature abutting it to the
south. The collapsed brick wall
in the middle of the area which
had numerous artifacts including
4 buttons over it appears to have
come from a second story wall of
the main house & not from the
small northern addition. The
mortar between the bricks is white,
as is the mortar from the main
house wall; the mortar from the
small addition is yellow instead
of white. Mortar on the main
foundation walls is pointed (ie -
one line made in the middle of the
mortar w/ the point of the trowel)
EX.

Also along the ~~south~~ east wall
of the main house a thin coat of

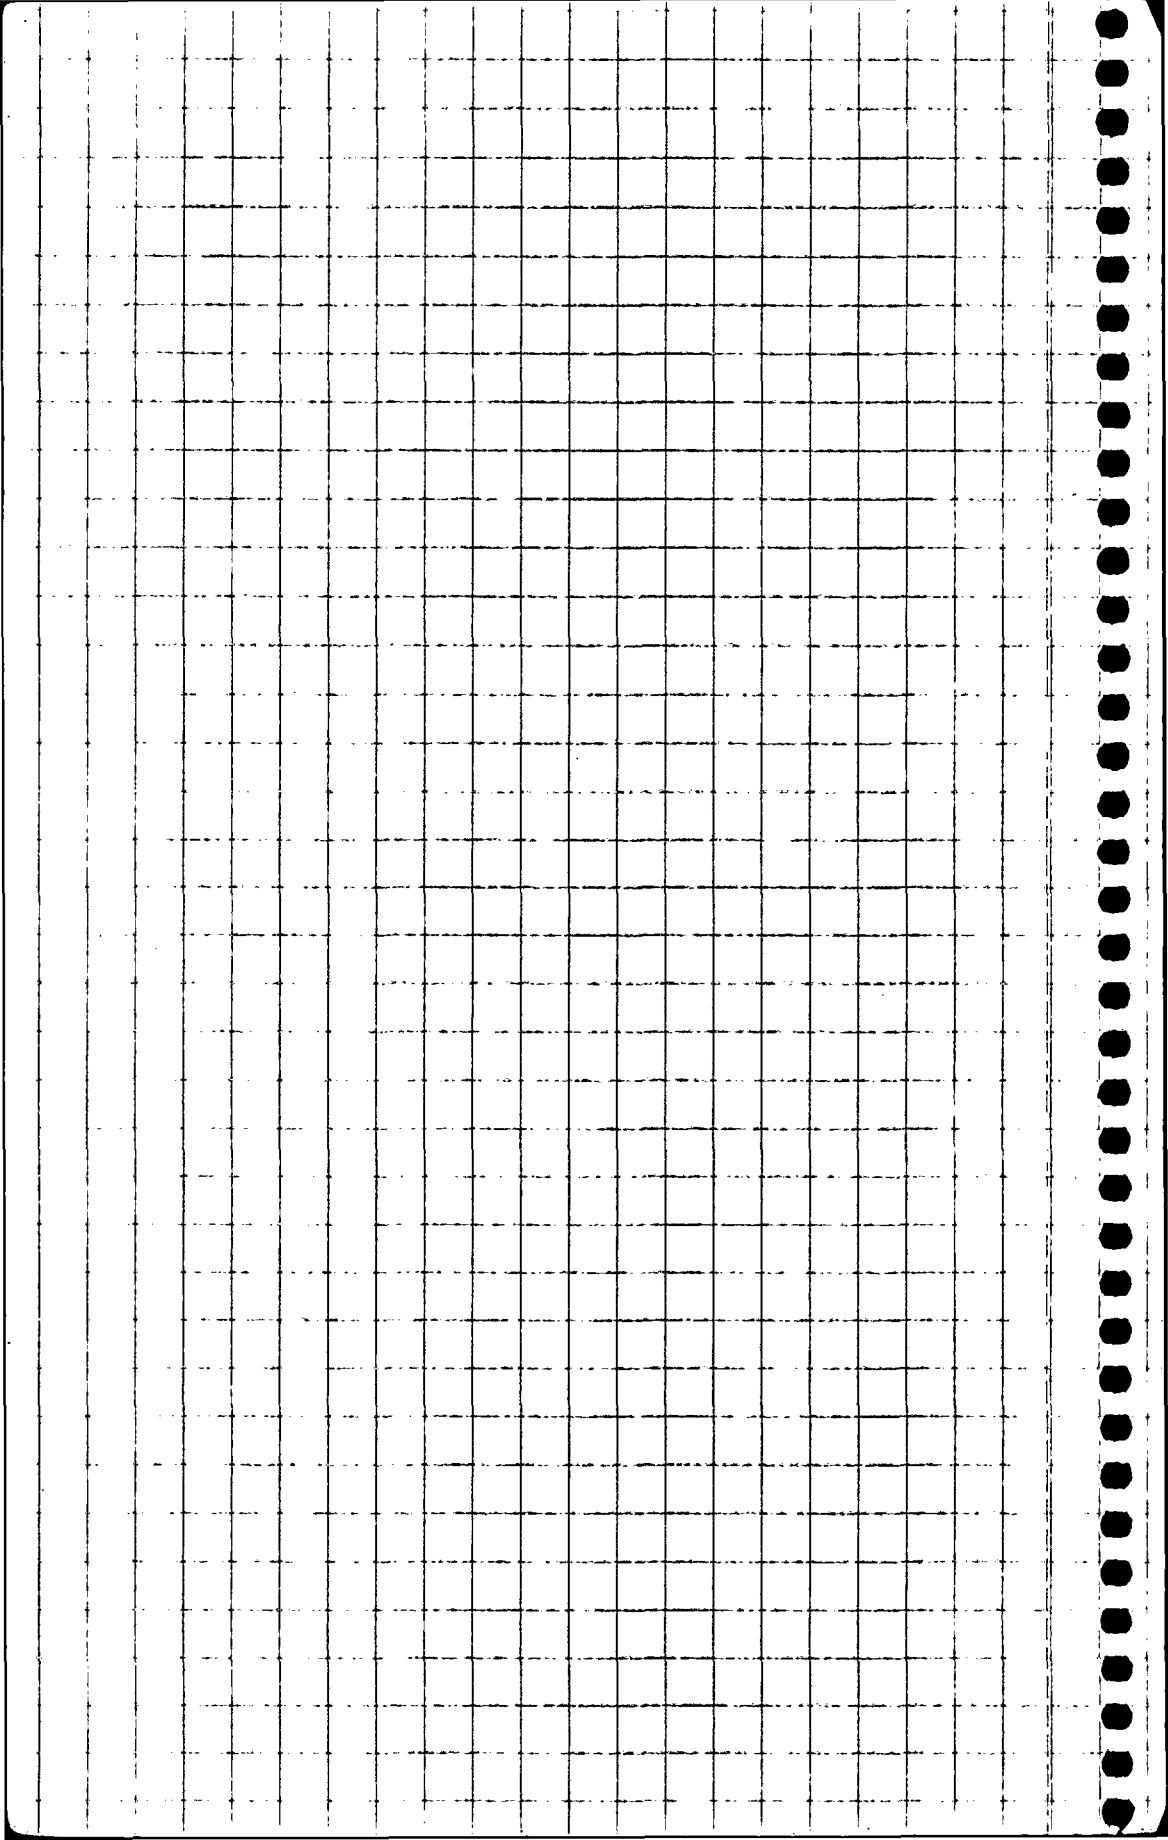

White plaster or mortar is seen around ground level. Assume goes below & was used as waterproofing for the walls. The collapsed wall also shows broken headers stretching up out of the brick which may have helped bind a second course of bricks to this wall. Second course (two courses seen in collapsed wall to west of house in Area IB) may have collapsed inward. IA area seems to be capped by a orange clay fill containing features, including a large pit at the NW corner of house, and, from Jeanes unit of last phase, there is an indication that features lie beneath this cap.

The decorative wall in the western edge 2x2 (W) Jeanes previous unit) heading west may have been a turreted wall around the edge of the garden terrace - at least along part of its northern edge*. It may only extend as far as the buried A in that area, supporting - partially at least the top of the fill. It appears to have been 4 courses thick w/ the top 2 courses showing a design →

The design

seems to be maybe $\frac{1}{2}$ a course

narrower than the undesigned bricks beneath. Mortar has been seen between the bricks - as white as that from the main foundation wall.

Area V - 2 small post holes show up at the same distance in front of the SE+SW corner of the meathouse seeming to indicate there may have been a porch around ~~the~~ this structure. Removing balk from above meat house feature. except on eastern edge where is being left to maintain profile showing stratigraphy overlying meathouse - also allows large granite stone to remain in place.

Area VA - Along the SE edge of the brick house there is a brick pad extending to the east. This pad and bricks extending back to the house are approx. 1 meter from the corner of the structure + extend out approx. 2 meters to the east. To the north of line appears to be an orange brown fill, to the south the red gravelly clay appears to be natural soil - like Chuck Howitts subsoil from Yarrow Area I. Will open up unit to the N to see if this is a box - possibly a chimney.

12 who will
need per diem

Area VB - features in area 12/12
mapped but no activity in
area today since it has been
flooded so often it is always
wet. Hopefully will dry out some
today.

Area VA - base of possible chimney
wall is supported by large natural
concretions similar to the one that
was in Garmon feature 6.

NEED TO GET: PLASTIC - BLACK -
40x100' - 6 mil thick + 1 kerosene
heater, need string dust pans,
buckets (~~beton~~) - large soup spoons (?) -

Mention to Charles - take both soil
samples already screened but, as
some features are very small.

Cecile recovered gun lock mechanism
from a flintlock pistol or rifle
from the profile of the meat house
wall (W profile) in the layer
Garmon recovered all his artifacts
from. In good shape.

12/13 SAT

Extremely cold + mildly windy.

Missable working conditions!

Working in areas IA, VA + VB.

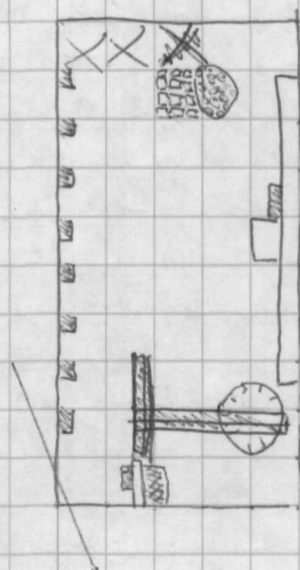

Cecile is there so work on meathouse has stopped & her crew that came is in area IA + VB. Work will be slow today due to cold weather.

Regridding IA now that rubble has been removed. Balbs being removed from Area VB. Bill ~~is mapping~~ mapping profile in brick house.

Appear rubble to south of ~~some~~ retaining wall in IA is probably an old 1x2 m unit (2 1x1 m units).

Feature will begin to be removed Monday. ~~In~~ Cecile will take out meathouse in 1x1 m units for convenience. Then she will move into Area IA w/ Mike. Mike will be crew chief in charge of structural features, Cecile of subsurface features. Will trench in 1x1 m unit area of the depression ^{near} BNW corner of foundation, put in units where N wall meets additional E wall, put units deep into Wedge of

Chen TA
where we will
excavate
for features

A-2

Area to see if there are many
subsurface features there or 1x1m units
separated by 1 undug 1x1.

Lit kerosene heater for 1st time at
10:30 AM. NOTE: must tell all
Crew Monday how to deal w/
heater. * Check on plastic. ▽

Bill Ronlette believes feature
attached to E wall of brickhouse to
be a fireplace of concretions used as
loadbearing blocks. Only 2 nails recovered
so far. Will trench brickhouse
first east to west (4 units wide)
and then N to S. Each trench will
be 2 m wide for safety - 1m wouldn't
be enough. Also will drop units into
western edge to find actual edge
within scatter debris to the west.

Area VB - will excavate peripheral features
first - must be done w/ those by
the end of the first day. Problem
will be to define the large
features by shape + size.

Cool + clear, 50°. Frost on 12/15
the ground. Get plastic today!
Saw Eric on a wild goose
chase! Linda + Tara arrived
at 8:15 AM.

12/12

Area VA - trenching the features, brick house, east to west road across six meters of area of 4 meters actually well within the feature. Other 2 at its edges. Large amount of bone in the upper layers of soil removed.

One of a line of possible pathholes in Area VB turned out to be a small tree hole. Possible line of pathholes went from NE corner towards SW across the middle large dark stain. Three to the NE of the large stain. The one in the NE corner turned out to be the tree hole.

VA - the brick concentration of vertical bricks including one large brick kiln (all of which is in front of the large concentration to the east along the eastern wall of the brick house may have a twin on the western wall where another brick concentration was found. Would be wise to excavate there and find out, also need to find the west wall there.

12/18

Rain day - useless.
Bob Cochrane worked 3 1/2 hours inventing bags.

12/30

Bricks being removed from feature in V+VA (brickhouse) where they had been piled.

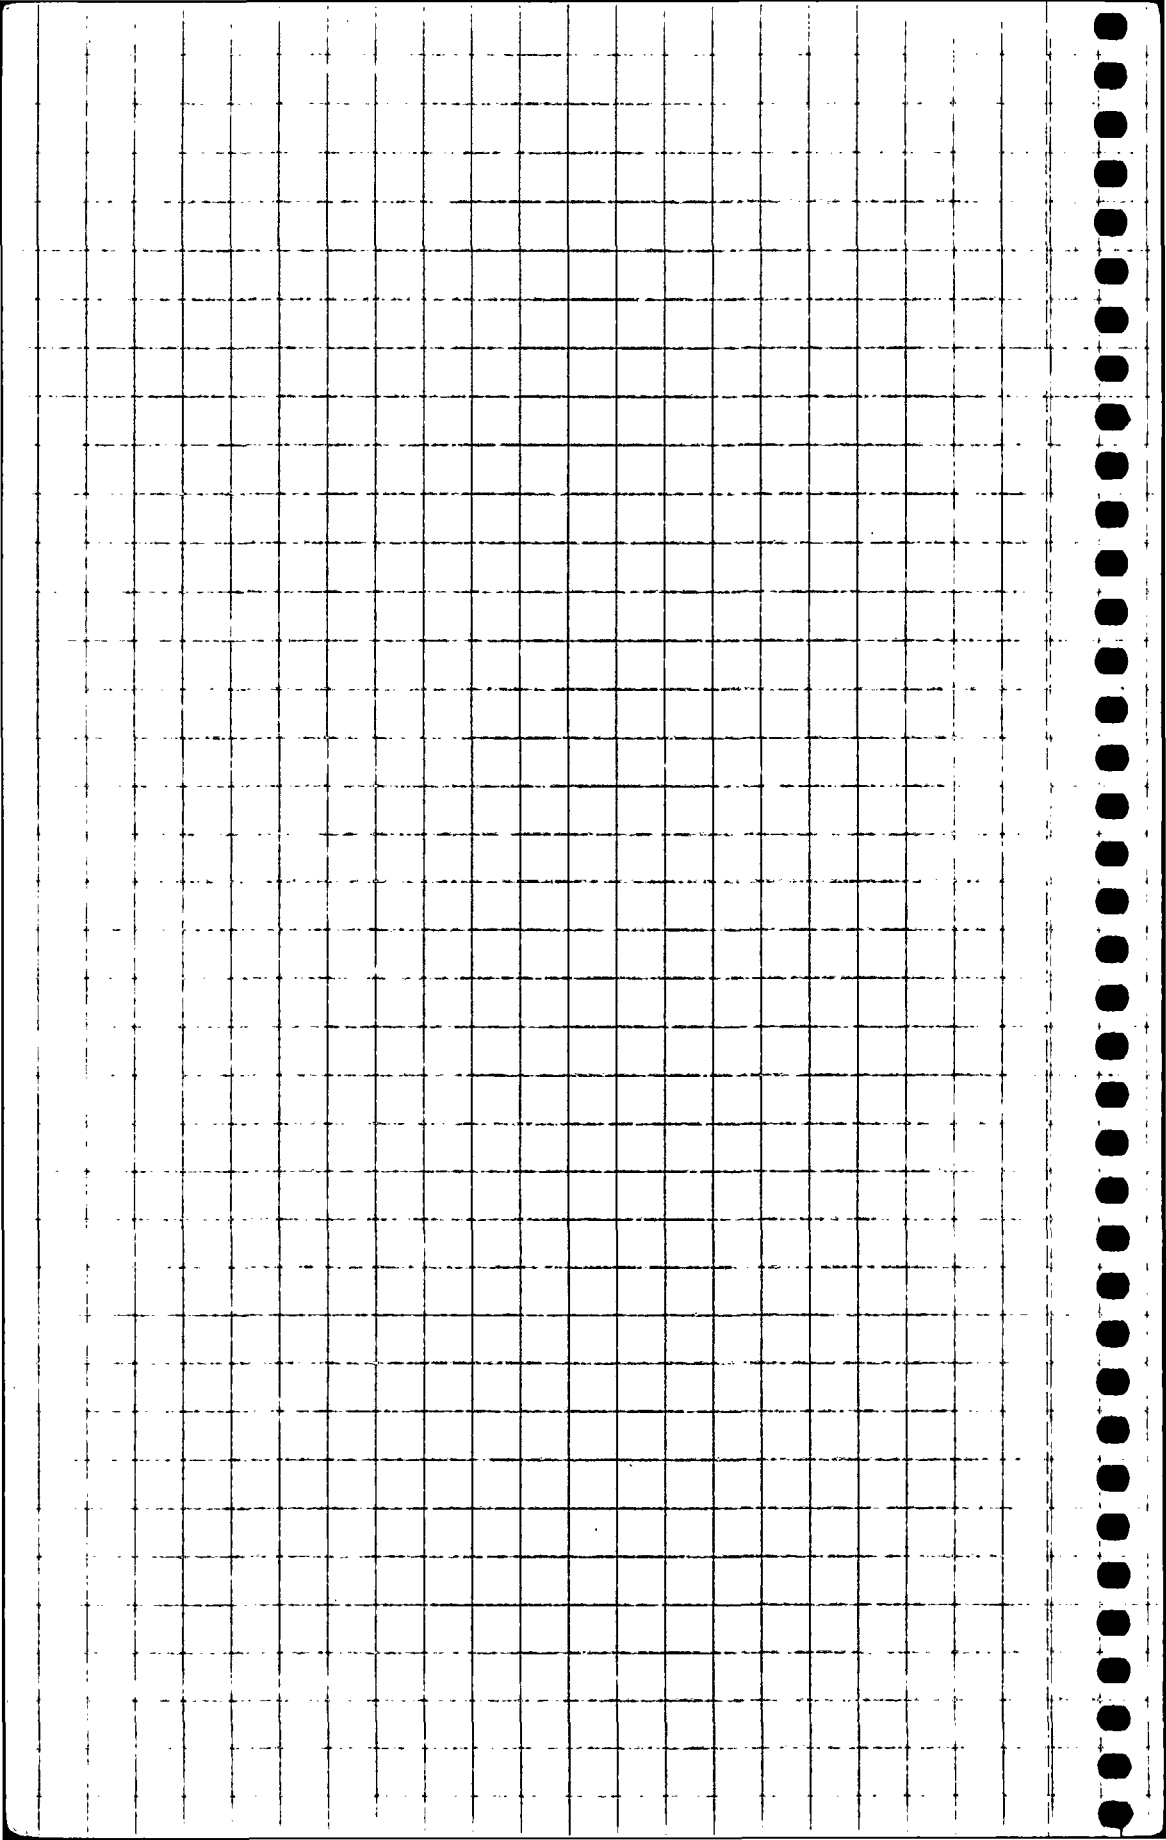

Area IA - has to be finished today. Opened proveniences must be completed. Hole on NW corner of house is full to it w/ burned shells + ash in lenses in the fill. At N edge of area have run into features extending from Sarrow Area. Pebble features removed show nothing beneath, just thin layers of pebbles on the clay cap.

— Mark Frank side w/ flr. —

Area V - sand being removed from floor of meathouse features. Very little Din way of artifacts recovered.

Area V-VA - brickhouse - taking units in trench down. Also removing brick pile from feature. Supposedly getting near floor of structure. Dry screening 50% of fill - wet screening 25%.

Area VB - attempting to complete features. $\frac{1}{2}$ of feature 31 has been removed. Some $\frac{1}{2}$ of feature 2 beneath it is also being removed in quarters. Appears to underlie 31. 31 may only be an extension of layer B above into

a depression or may be a shallow 12/30
garbage feature above feature 2.

* From meathouse + brickhouse -

1 bottle seal from each w/

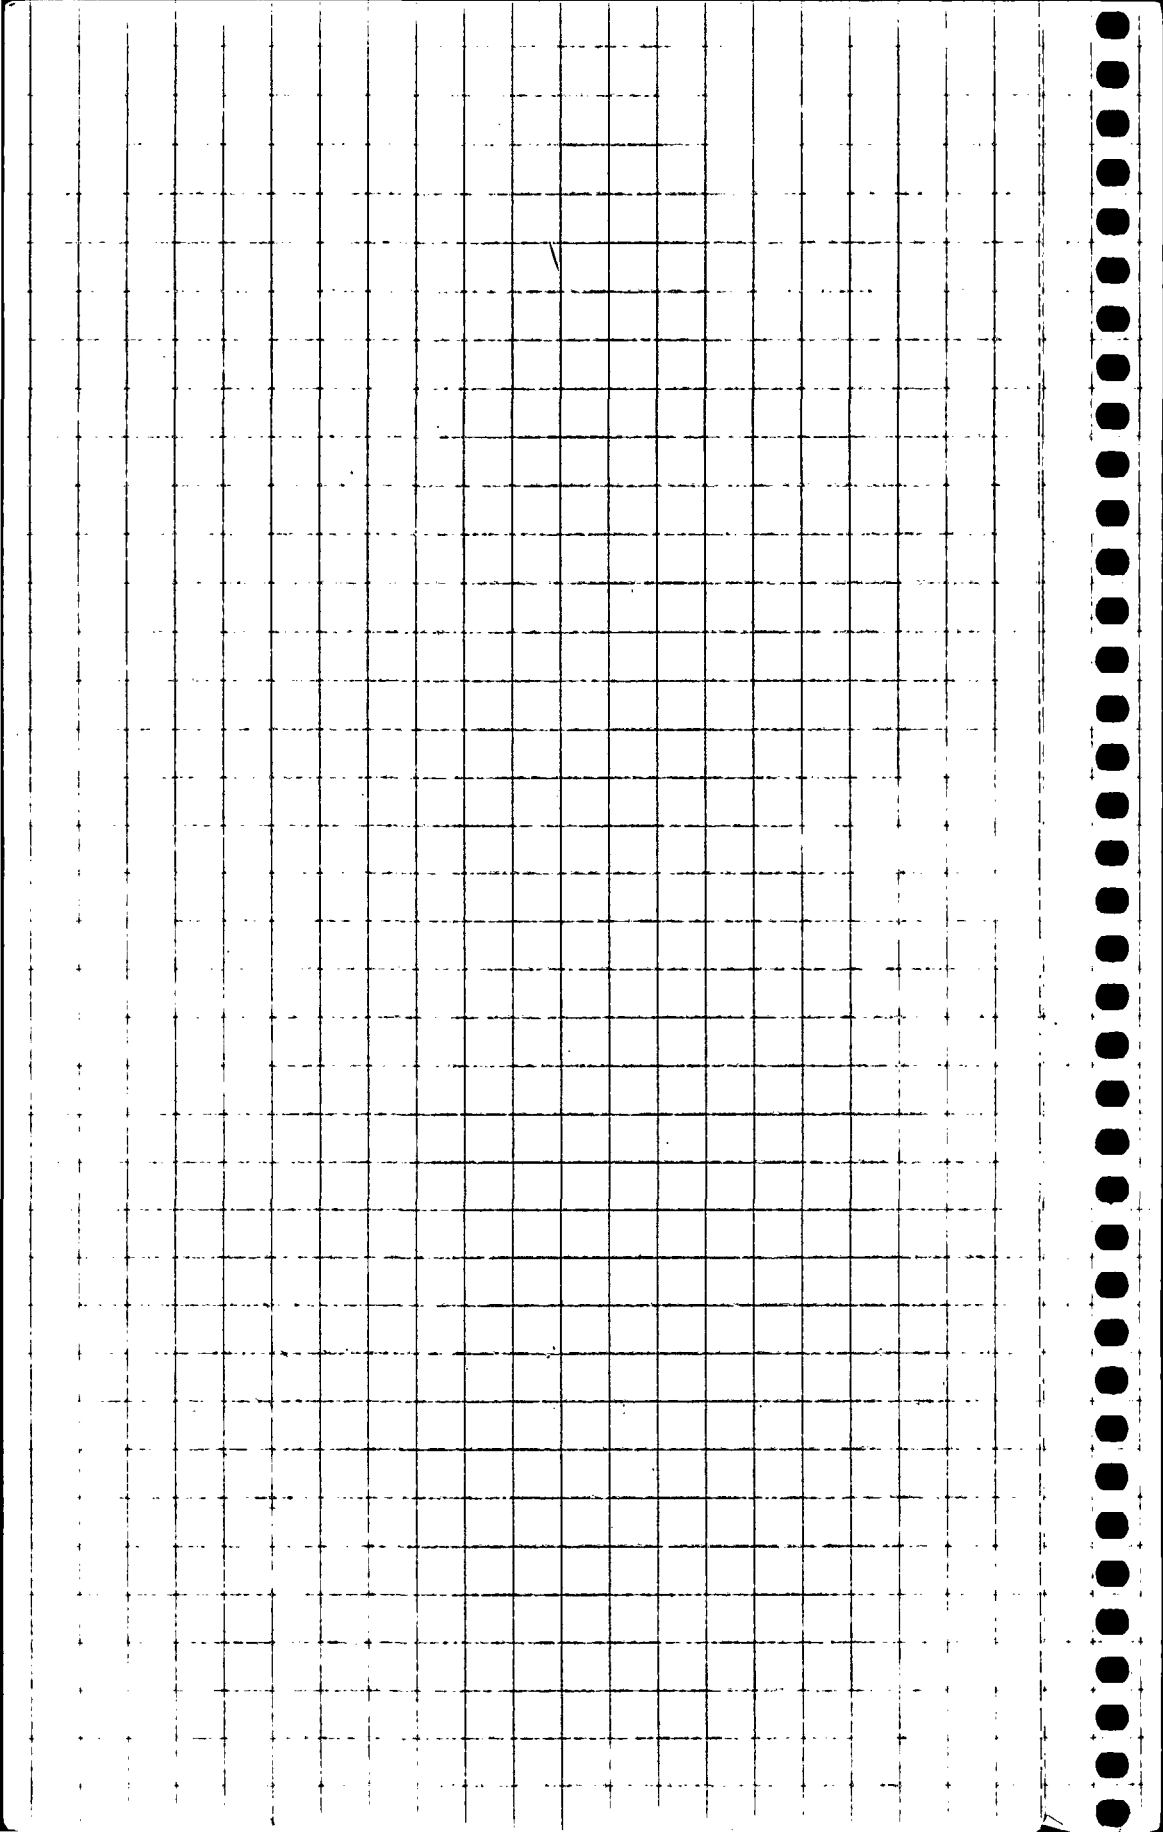

A indigenous Thomas Addison -
but which one? Both found in
field of structures.

- Bonita Rose absent -

In trench in Area I A have found several
features were discovered which had been
cut into. 2 post holes were cut into
in N wall + NW corner. Were placed
in the clay cap. A surprise to me.
Several features also in base of
trench & brick filled. Also shows edge
of hole in NW corner of main house very
clearly. Hole filled w/ fill which contained
lenses of burnt soil which appeared
machine cut. Out of lenses, in the fill,
brickley was also recovered.
Area VB in feature 2 which underlies
31 contained bottle seal w/ A on it.
The A is the same as several of those
seen etched into glass bottle frag
from Gannon well. First one found w/
such a stylized A.

Meathouse completed yesterday.

Jachore only continued down
another 20cm when Augered.

Have found sand floor - nine + level
in brickhouse + in 1 corner what
maybe bricks overlying that floor.

Area VB - features 2 + 31 appear to
have been circular now. Just trash
middens. Feature 46 - large dark
stain to W of 31 + 2 is currently being
excavated. One 2x2 of it is being
excavated w/ the walls being used as
profiles. Several large ~~brick~~ port hole
features in Area. May be associated.

Have 3 exposed. Opening another 1x1 to
see if a fourth will be exposed to show
line of a structure.

* John McC believes all may still be
refuse from main house.
