Area VII

9-23-87 (Wen.) Eric Johnson

Dana, Bruce, John W, Katherine and Mike (8:02) starting new area cutting and clearing brush. Betsy G. is in our area setting up our grid. Dana is helping her.
Becky R. isn't here and I am told that she may be in later. (arrived 9:23AM started work at 10:30AM) she was talking with Jeff Snyder.
I am trying to catch up with paper work from area IC.
I had a talk with Katherine about her work and talking about my changing her paper work. She says that she never said that I had changed her work. I asked that if she had any problems see me if I was the problem still see me or talk to Jeanne or Jeff not to other crew members.

The area along Thes258 trench (G) Area IVA
Dan Wagner was here today he seems to think that about 2 ft of the original top soil has some how been removed and then the cultural material and fill were deposited.

The fill deposits sit on top of the coastal plain gravels in this area.

The area south of area IC in the trench. It looks as if the top soil north of this area has been graded (moved) south and then fill layers were deposited. this may be why the buried "A" only shows in some areas along the south edge of the fill area.

S270 + E200 S 280

E 185 E225 S 265

9-24-87 (Thurs.)

Bruce, Dana, Katherine, Becky R. present
John W. sick today.

There is a yellowjacket nest in the middle of where we want to excavate. We tried to spray them yesterday but seems some didn't die, Dana said she saw some?
We have opened up a checkerboard pattern over what was the area that had the most "hits" (positive tests) during the testing phase.
Mike arrived 8:05AM.

We have six 2X2 units open but are only doing the SE¼ by layers. If we have a positive 1X1 we can dig the remaining three quads. at a later date.

The bees are dead! Bruce stuck his shovel handle into their hole to check?

Katherine worked with Betsy G. taking elev. for our area this morning.

The morning went well — Very nice day

I worked on a map of area VII putting in old test units and backhoe trenches

the surface in the area we have started is very unevers and there are a number of small trees. We are recovering small pieces of ceramic (creamware, pearlware, whiteware, earthenware), some pipe frags; glass (window, bottle), metal (nails, etc.) shell, brick frags and some coal. No feas. yet.

Crew did a good job today!

9-25-87 (fri)

Becky R., Katherine, John W., Bruce, Dana present Mike arrived 8:03 am
Cool and cloudy with strong winds. got off to a slow start. Everything going o.k. warmer by lunch & clear

Ceramics much the same with a small amount of delft being found by Becky R in S272 E199,

9-28-87 (Monday) (7)

Dana, Bruce, John W., Katherine, Becky R are present Mike arrives @ 8:00 AM.
It's a cool clear day and we haven't had any rain over the weekend.
We are working in the same six 1X1s that we started 9-24-87 - there seems to be a lot of layers of fill in this area. They seem to show up better in plan than in profile? The artifact count is down.

We are going to spread out as we finish these units. Bruce has moved to S276 E225 and will do the SE 1/4 of that unit. Becky R. checking out @ 2:00 pm. (Insurance problem). Jeanne Ward checked out @ 1:00 pm.
fair day - one 1X1 done and three very close to being finish.

9-29-87 (tuesday)

Dana, John W., Katherine, Becky R, and Bruce present. Mike arrived 8:05 AM. Cool clear day, Jeanne not at work today, I don't feel well but came anyway. I am still working on the paper work for Area IC. spent some time with E.C. Harris's Principles of Archaeological Stratigraphy. fair days work. All six tech's have moved to their new units.

9-30-87 (Wed)

Has rained overnight and this morning, we arrived on site at 11:30 AM. Dana, John W. Katherine, Becky R and Bruce present and Mike arrived @ 12:08 pm. The crew was asked to clear and cleanup the manor house cellar and the area around it, to make ready for the sat. photo session. I am still working on the paper work for Area IC. Becky R. left early, Insurance again.

10-1-87 (thursday)

Dana, Mike, Katherine present Becky R arrived 7:45A.M. Bruce & John W. not here today.
Cold and windy - in the mid 50's and 15-20MPH winds & cloudy. I am still working on area IC paper work and doing it for this area also.
John McCarthy on site today and Charles Checks came by this afternoon. It has been very windy and cool! all day.

10-2-87 (fri)

Dana, Bruce, John W., Katherine, and Becky R. present. Becky was sent to get plastic to cover the site. It is cool and calm (49°F).
Mike arrived @ 8:07 A.M.

Dana, Becky R, and Katherine are taking the afternoon off.

I had a problem with Katherine today and she was joined by Becky R. I don't know how to cure the problem at this time. I will have a talk with Jeff this afternoon. Maybe better to split them up?
Anything said to Becky or Katherine sets them off and they seem to think that, they are being punished and singled out and are being plotted against!

cont. 10-2-87

Well by lunch today we have nine 1X1 units finished (no feas yet). there were three 1X1 units dug earlier this season in search of buried "A" and or Abo feas. and they had no feas. One test 1X1 that was dug almost a year ago had a fea. in it. We are going to open the 2X2 unit that surrounds that 1X1 test (not exactly on grid) and try to expose the rest of the fea. that was found.

Mike has found what maybe plantings feas. In his unit (S266E209) there was what appeared to be a ridge running north South in the center of the 1X1 sloping to both sides (east & west) We have stopped excavations on this 1X1 and will excavate the 1X1 to the west trying to gain a better idea about what is happening.

John W. working in S272E191 has found in Layer B a piece of Westerwald and saltglazed stoneware. (this is only 10-12cm deep) This area seems to be different in every 1X1.

by this afternoon the wind is heavy but the sky is clear and the tempature is great.

10-5-87 Monday (8)

Cold and Clear. Dana, John W., Bruce, and Katherine present Becky R arrived @ 7:43 AM Mike arrived @ 8:03 AM.

Bruce is back in S274 E223 at the eastern edge of our area. Becky R. has started unit S266 E213 to the east of Mike's unit, to determine if the soil found in mikes unit extend to the east. Mike is now working on the southwestern quad. of his unit to get a better look at what maye some sort of garden feas. Katherine has started the two x two meter unit that surrounds the old test pit that had the fea. found during the testing phase. Dana and John W. are still working on the same units as last week.

Becky R. & Katherine at the end of the day told me that they were no longer on my crew.?

10-6-87 tuesday

Dana, John W., Bruce, Katherine, & Becky R present Mike arrived @ 8:02 AM

I was told this morning that Dana had also asked to get off my crew as well as Becky R and Katherine.
My crew was put to work cleaning the area
(con't)

around the manor house. Jeff is talking to them one by one.
It is partey cloudy and cool and the weather forcast is for rain. We have uncovered area IA & the northern edge of IC to dry them out. Later in day bailed out and uncovered all of area IC. I have caught up on the area IC paper work! Now only have to do Harris Matrix!

10-7-87 (Wen)

It rained overnight. we had to bail out our areas and start cleaning again. John W., Dana, Bruce, Katherine, and Becky R. present. Mike arrived @ 8:00?
Jeff, Jeanne, Becky R., Katherine, and myself had a meeting this morning. I am not sure what the outcome of all this will be but I may end up quitting and going home.
Becky R. didn't return to work until 10:00AM she was talking with Ana.
This afternoon I called & talked with John McCarthy about the crew problem. I am waiting for the result!
It look like we will all have to stay late to try and finish cleaning for the photos. I now have all my books in order but haven't done the Harris Matrix By Now I am sure I have everyone pissed with me including the Brass.
We left the site @ 6:00pm

10-8-87 (thur.)

Katherine & Becky R have been let go, after a very long day yesterday.
John W., Bruce, Dana present at 6:30 AM. and mike arrived @ 7:49 AM.
We spent the day cleaning for the photos. The day went well and the crew left the site @ 1200 noon

10-9-87 (fri) T.G.I.F. !!
it is clear & cold but no wind
Bruce, Dana, and John W present.
We are back in area VII and will continue to excavate in hope of finding feas. Mike arrived @ 8:00 AM. Dana finished her unit and has moved to take over the two x two unit that surrounds the old test one x one.
John W. has stopped the southeast one by one in his unit and will take layers A & B out in the southwest one by one to try and define what maybe a fea. that runs along the west edge of the southeast quad.
Bruce has finished layer A in his unit (S274E209) and is finding more artifacts in layer B than A. they include redware whiteware and porcelain. I have excavated layer B in the southwest quad of unit (S266E213) and layer C is the same soil as Mikes layer D in his unit (S266E208). This layer maybe a garden fea. more later. John McCarthy came by this afternoon.

10-12-87 (Monday) (9)

It is raining this morning, we are holding off until 10:30 AM.
I am doing Harris Matrix. Found that I will have to wait for some paper work that Jeanne has, befor I can complete a profile (N-S) for the area IC. Spent two hrs. on project.
We arrived at the site 11:20 AM
Bruce, Dana, John W. present Mike arrived @ 12:28 PM. he didn't take day off as planned.
John W. found more Westerwald in the SW quad of S 272 E 191 about 8-10cm below surface.
John W. took the SW quad out as two layers so far. A&B. The profiles show a number of different fills and he will take the SW quad out fill by fill layer using the profile of the SE quad as a guide. Mike is finding a different type of fill layers, where we thought that there might be garden feas. More will have to be done befor anything can be defined.

10-13-87 (Tues)

Bruce, Dana, and John W. present
It is cold and clear. looks like a wind building.
We have to excavate a total of 18.75 two x two's in area VII. at this time we have finished 2.75 two x two's and have 3.50 open.
Mike arrived @ 8:02 AM.
The day has gone well and the crew are doing great. The wind did pick up

and blew all day making it cold as ?
Becky S. join our crew @ 3:00 pm this afternoon and will be working with us tomorrow. She will be taking a few days off and will return on the 20th.

10-14-87 (Wed)

It's cold and clear this morning. Dana, Bruce, John W., and Becky S present. Mike arrived @ 8:02 A.M.
After excavation of S266 E209 (Mike's unit) we still can't say for sure if that area was used as a garden. Becky S. is excavating S266 E213 and maybe that will help. We have decided that layers C, D & E in Mike's unit were lens and that the same soils in Becky's unit could be taken out together as one layer (layer C). Dana has taken layer C out in her SW quad. and defined the edge of fea. #192. There is a lot of soil to be moved befor we will be able to have a better look at the fea. which extends into the south wall. Bruce has what maybe a fea. in layer B of his unit (S274 E209). He will have to remove most of layer B in his SW quad, to expose it and define it. Dana found a piece of delft in S275 E204 about 43 cm below surface (layer C) This layer hasn't had many artifacts.

10-15-87
forgot note book

10-16-87 (Fri)

It is a cold clear Day Today

Bruce and Dana present and a new member joined our crew today Jennifer Germer. Mike arrived @ 8:03 AM. I forgot my notebook yesterday. Bruce and Dana were here and Mike arrived @ 8:00 AM. We had a good day and Jeanne helped us cut trees and move logs. Today Mike has finished the two, one by two, units along the north edge of our area and has opened a two by two to the south (S268 E209) Jennifer will be finishing the unit that John W. left. when he took off Wed night after per diem. the day went well and Dana has exposed fea. #192 in her unit (S276 E205) and the first photos were taken in our area today. fea. #192 extends into the north and south walls. and Dana will open the unit to the North. The unit that Jennifer has started in has something strange going on and more will have to be done to find out what. (It may only be rodent burrows) (S272 E191).
John McCarthy was here this afternoon and we had a group break and let off early (30 min).

10-19-87 (Mon) (10)

It's a cool clear Day, very nice.

Dana, Bruce and Jennifer are present and Mike arrived @ 8:02 AM
Layer D in Jennifer's unit (S272 E191) has turned out to be fea's #521A, #521B and #521C. I think that these feas are the results of the leveling of the area befor the fills were deposited. I am not sure of the proper name for it, but I think that what I have known as a pan or drag, was used to cut away the high spots and fill in the low. and the feas are the scars left by this pan or drag when it was used. We are going to excavate the north half of the two by two to better define the fea's. Dana has finished (S276 E205) and is now opening S274 E205 to the north to expose more of Fea. #192. She is only screening 50% of layers A-C (the SW/4 & NE/4) a judgemental sample will be taken from the SE/4 & NW/4. Bruce has almost finished S274 E209 and no feas were found. He will do the West half of S272 E209 to the north. Mike is still working on layer A of S268 E209.

10-20-87 (tues)

It is a cool cloudy day with a forcast of rain in the afternoon.

Jennifer, Bruce, Dana, and Becky S are present and Mike arrived @ 8:08 AM. Becky S. opened a new unit S268 E203 and is doing the southeast one by one. Mike has found Westerwald in layer B of unit S268 E209. It is of the later type with the blue outside the incising. Dana also found Westerwald but earlier type in layer B of unit S274 E205. This piece had an incised pattern that may be datable and what appears to be a purple glaze. She also later found a religous medal (silver and very nice) in the same layer and same unit.

10-21-87 (Wed)

It's cool and light rain. forecast is clearing and cold.
Dana, Jennifer, Becky S. and Bruce are present. Mike arrived @ 8:05 AM
The wind has picked up and it has rained enough to get everyone damp and cold. Dana has found another religous medal in S274 E205 it is also silver.
By lunch it has cleared to partly cloudy and isn't bad. I have finished making out a list of features for area IC and am starting to work on a north-South profile for that area.

10-22-87 (thurs)

Its Cold and Clear (40°) with a light wind. Dana, Jennifer, Bruce and Becky S. are Present. Mike arrived @ 8:00 am Dana has found a piece of delft in layer C unit S274 E205. Charles Check came by this afternoon. We talked about the number of unit needed to be done in this area. By what he said we would almost be finished by next week. I am not sure I understand how he calculates this, but he is (or one of) the boss. I am still working on the N-S profile for Area FC.

10-23-87 (Fri)

Its cold and clear (48°) with a wind coming up. Jennifer, Dana and Becky S. present and Bruce is off Today. Mike arrived @ 8:07 am I have asked him to chunk out the SW & NE quads of layer C in unit S268E209 and to take a judgemental sample from them. After lunch we found that layer C was in fact a Fea. # 535, which is a large garden bed (we think). We will have to change some notes and send a note to the lab to change some lot numbers from layer C to fea. #535. He had chunked out the North-east quad. befor we defined the fea #535 but we saved the south west and it was screened and water screened.

He has excavated the north half of Layer C in this unit and part of the south-west quad. We are going to hold on this unit and excavate the south half of unit S268 E207 down to the surface of the fea. The material (Layer A & Layer B) from this unit will be screened in the South-west quad and chunked in the South-east with a judgementas sample being taken. We are doing this to try and follow the South edge of the fea. Some delft ceramics have been found in the fea fill as has some lead.

10-26-87 (Mon) (11)

Its cold and clear (38°)
Jennifer (her birthday), Becky S, and Dana present Bruce isn't here? Mike arrived @ 8:02 am. I am still working on the Harris matrix for area IC and asked Jeff to spent some time with me on it. Later today.
everything went well today and everyone is still working on their units

10-27-87 (Tues)

Its cold and cloudy with a forecast of 100% chance of rain by afternoon. Jennifer, Bruce, Dana and Becky S are present. Mike arrived @ 8:05 am. started to rain about 9:00 am and didn't stop. We left the field @ 11:45 A.M.

I am spending the afternoon doing Harris Matrix, and almost finished doing the hand part.

10-28-87 (Wen)

Its cold and partly cloudy. It rained almost all night and we had some water damage to old units.
Jennifer, Dana, Bruce and Becky S are present. Mike arrived @ 8:10 am.
I sent a note to change some lot numbers from S274 E209 Layer C to Fea #537 Layer M to the lab today.
We have seven features in our area now but I think all of them are "drag scars" made during the clearing and leveling of the area. We have opened two units along the south-west edge of our area in hopes of finding the remains of a structure shown on a 1863? map.

10-29-87 (Thurs)

Its cold and partly cloudy (37°).
Dana, Jennifer, Bruce, and Becky S. are present. Mike arrived @ 8:07 AM.
I have spent the day doing paper work for area VII and Harris matrix for area IC.
Jennifer has finished S272 E191 and moved to S 276 E215 and is doing the north-west quad. Becky S. is doing the south-east quad of S280 E195 Mike now has three units open to define fea. 535 S268 E207 & E205 & E209 He is

only doing the south half of E205 & E207. Dana has almost taken the east half of unit S278 E205 down to fea. #192. Bruce has two units open. He has been waiting for unit S272 E209 to dry so he can finish fea. # 537. He has been working in unit S280 E191 excavating the south half.

10-30-87 (Fri) T.G.I.F.

It's cold and cloudy with a 20% chance of rain.
Dana, Jennifer, Becky S. and Bruce are present. Mike arrived @ 8:17 am Mike found a piece of delft in Layer A, of unit S268 E205.
Dana didn't feel well and went home @ noon. Becky S. has finished her one by one and will move to a new one Monday. Bruce has found a fea. under fea. 537 in his unit. We are going to uncover more of it befor giving it a number. We had a good day and the weather cleared. Almost everyone did a good days work.

11-2-87 (Mon) (12)

Its cool and partly cloudy.
Bruce, Jennifer, and Dana are here.
Becky S. is sick today with a cold.
Mike arrived @ 8:08 AM. We had a crew chief meeting this morning and went over the different areas. We now have 51 one x one x ? cm done and seven one x one units open.

11-3-87 (Tues)

Its 51°F and fog this morning. Looks like a nice day.
Bruce, Jennifer, Dana, and Becky S. are present. Bruce will be opening the west half of S270F209 to finish the North-South profile across area VII. He will also be looking for data on the charcoal interface between layer B and layer C, and the relationship of the garden bed (#535) to the garden bed (#537).
Mike arrived @ 8:04 am. He says he will be leaving on Mon 11-23-87 and Becky S. says her last day will be 11-20-87.
Jennifer and Becky S. are excavating units to the east of the area that fea #535 was first defined, in hopes of finding the south edge or defining the eastern end.

11-4-87 (Wed)

At 53° and partly cloudy with a forecast of 80's. Look like another great day. Jennifer, Dana, Becky S. and Bruce are present. I went on a box run with Pat. Mike arrived. I have a new crew member this morning Mary and I have her excavating a one by one in the north-east corner of S272 E203 looking for the north edge of Fea. #537.

11-5-87 (thurs)

It's 56° and cloudy. Bruce, Becky S., Jennifer, Mary, and Dana are present. I was informed that they are going to transfer Bruce to Ellen's crew and give me Kathy to split up roommates and solve problems on Ellen's crew. Mike arrived @ 8:07 AM. Dana is finishing S280 E205 and will finish the units that Bruce was doing. Bruce left our crew @ 8:12 AM. and Kathy came to our area @ 1:15 P.M.

11-6-87 (fri)

Its cold 36° and windy. Kathy, Jennifer, Becky S, Dana, and Mary are here. Mike arrived @ 8:09 AM. The wind is very bad and everybody is cold. Becky S. went home @ noon sick.

11-9-87 (Mon) (13)

Its cool 60° and cloudy and the forcast is for rain this afternoon. Dana, Jennifer, and Kathy are here. Mary and Becky S are sick. Mike arrived @ 8:09 AM.
We are still looking for the edges of fea #535 & #537. We have finished 65 one by ones and have five open. I think we will be finished in this area by Wen or Thurs.

11-10-87 (Tues)

rained out

11-11-87 (Wen)

snowed out

11-12-87 (Thurs)

ked out

11-13-87 (fri)

It cold and wet. partly cloudy sky and 31°. We have about a foot of snow on the ground. My feet are wet and its going to be a long day. Jennifer, Dana, Kathy, Mary, and Becky S are present, Mike arrived at 8:03 AM. We are opening two of the last three one by one a needed to finish this area. We worked! don't know about other crews, until 11:30 AM then joined in on a snowball fight.
We left the site at 2:00 noon.

11-16-87 (Mon) (14)

It cold 40° and wet, the snow has almost gone. Jennifer, Kathy, Mary, Dana, and Becky S. are present.
Mike arrived @ 8:07 AM.
The day had turned out nice, very nice. The units are wet but it had helped to define thing better in some units. Mike had redefined fea. #537 in unit S272 E211 in the NE quad and thinks that where we thought the fea. had turned south there is a possible post hole. More will be done on this.

11-17-87 (Tues)

It's 58° and cloudy today. Looks like rain. Mary, Dana, Kathy, Jennifer and Becky S. are present and what a happy group we are. Becky S. is opening our last one by one in this area. Mary is going to string out two - two by two on the east side of the Manor house at and near the steps. As we finish area VII we are moving over there. Mike arrived @ 8:09 AM. after lunch Jennifer, Dana, and Mary are in the new area and Kathy will be joining them soon.
We have all but Becky S. moved to area IB. She will finish Wen.

11-18-87 (Wen)

It 59° and cloudy at the site. Mary, Kathy Jennifer, Dana, and Becky S are present. Becky S. is finishing the last unit in Area VII. We have two - two by two units open in area IB. One in the east stairs for the Manor house and the other nearby but adjoining the foundation wall of the Manor house. Mike arrived ~ 8:09 AM. and is working in Area V. Becky S. moved to help Bill in his area. So I only have four people working in my area now.

We have defined two new feas in area IB. One is a post hole & mold along the front edge of the north edge stone of the steps and the other is a brick fea. near the Manor house foundation.

11-19-87 (Thurs.)

It's in the 40's and only partly cloudy. Jennifer, Dana, Kathy, and Mary are present.
the cobble drive in front of the steps is constructed directly on top of the construction debris with out anything between? the steps may have been built directly on top of the cobble drive (Layer O looks very much like the cobble drive.). The material that is being recovered from the step layers seems to be mid-late 1800s. (rimfire 22 shell etc. The steps on the West side of the house seem to date mid-late 1800s (a penny 1879 etc)

11-20-87 (FRI.) (My last fri)

It's in the 40's and falling partly cloudy and windy. Jennifer, Dana, Mary and Kathy are here and Mike arrived @ 8:32 AM. We had a good day but cold. We called clean-up @ 3:15 pm.

Area VII

I think that there are three layers over subsoil in this area.

The first is the topsoil that overlies the site.

The next is a fill layer B deposited during the terrace building. This layer is made up of as many different soils as are on the site and the artifacts recovered from it range in date from the earliest date to the time of fill (that date?).

Layer C is made up of redeposited soils that were mixed and moved during the clearing and leveling of the area. This layer has charcoal flecks and flecks that reflect the burning of brush during clearing. At the base of this layer were found a number of north-south scars cut into subsoil. These scars were made by the equipment used to level the surface and include #521A, #521B, #521C, #538, and #192. Cut into this layer were two large garden feas that run east-west. They are #535 and #537. The southern edge of #535 was followed across the site in an effort to determine the east and west edges. The southern edge extended from the E 201 line to the E 216 line where the eastern extent of the fea was defined. The western edge wasn't located and the northern extent of the fea wasn't determined.

The northern edge of fea #537, which is found approximately five meters south of the southern extent of fea #535 was followed east and west in hope of determining the extent of the fea. The southern, eastern, and western edges of this fea. were never determined.
The one other fea. found that wasn't a garden bed or equipment scar was a rectangular stain ~ 12-15cm deep & 25 by 50cm. This fea. was cut into subsoil and may have been a posthole before the leveling episode.
