F73 fall in Hole to S — S225 E286.

M/A - 10YR3/2 very dark grayish brown silty loam

① humus topsoil "fill layer within F73"

② relatively high concentration of bone (goat, pig, cattle) clipsom, porcelain, french gunflint, pressed glass, whiteware, delft

③ "probable living surface w/ range of 18th + 19th C artifacts

④ Depth: 13-23cm.

N/B - 10YR6/6 brownish yellow silty clay: few sub pebbles

① fill layer

F73 pad = 2' max depth

② 18th cen, British brown stoneware, delft, nails, bottle glass.

>2' max. depth

③ Destruction sequence due to large amts brick + mortar present.

④ Depth: 9-28cm w/ exception of NW corner = 0

O/C - 5YR5/6 yellowish red sandy clay w/ high pebble content

① Fill layer, redeposited subsoil.

3½' max depth

② very few artifacts - abo. sherd, bottle glass, pipestem, 18th cen

③ infilling of hole w/ (HYPOTH) ~~subsoil~~ fill removed from cellar hole w/ (2nd HYPOTH) FILL FROM PASSAGE.

④ Depth: 6-31cm

P/O - 7.5YR5/6 strong brown clay w/ small patches of pebbly 5YR5/6 yellowish red sandy clay.

① Fill layer, redeposited subsoil.

② Very few artifacts: 2 nails, 2 bottle glass frags, 1 kaolin pipebowl frag.

③ "most likely associated w/ construction of F73 &/or F6

④ Depth: 12-46cm

F73. S222E 284
F129 S221E286.

STRAT.
FILL.
ELEVATIONS
SURROUNDING FILLS
DISTURBANCE IN UNITS S219E284 + S220E284 + S219E286
S220E286
S219E286 (Layer M)
F129 is trench cut through F73 fill down to sterile soil. W edge very hard to define as abutts a brick concentration w/ in F73 Layer N (distinct fa.?)
F129 mistaken as F73 — 219E286 Layer O
10YR5/3 brown sandy silt mottled w/ 10YR5/4 yellowish brown silt w/ brick & rounded pebbles
Beneath = 10YR6/6 sterile. Huge density of 18th cm. artifacts - delft, olive bottle glass, Refined redware.) F149 + 149A exposed below this layer. → layer appears not part of "F73" but rather a fill layer. in yard of F6.

F73 FILL IN HOLE TO S. S225 E286 Pg 2.

Q/E - 5YR 5/6 yellowish red pebbly sandy clay overlying natural subsoil = 10YR6/6 brownish yellow clay.

1. Fill layer, redeposited subsoil. (similar to layer O/C
2. One artifact: 1 Kaolin pipestem. 18th c.
3. infilling hole, associated w/ construction F73 & or F6.
4. Depth: 11 - 21 cm

TOTAL DEPTH: MIN: 51cm, MAX: 149 cm. - cellar floor = 140

F153 at surface of layer O/C, 10YR 5/6 yellowish brown sandy clay loam. 110cm N-S, 69cm E-W.

1. squarish feature w/ brick + mortar & darker color than surrounding sand matrix
2. delft, redware, bottle glass, mortar, brick, bone, pipestem, nails.
3. seems layer P = construction, F153 FILL associated w/ destruction.
4. Depth: 27 - 34 cm. (roughly 1' deep).
5. Fill similar to overlying layer N/B as are artifacts = open at infilling.

POSSIBLE ALTERNATE INTERPS FOR F73

1. Hole & pad are all that remain of a bulkhead entryway into the cellar.
2. F73 + F129 are part of a central H shaped fireplace + F73 hole was original cellar hole located near kitchen
3. F73 structure + hole represent what remains of a projecting stair tower. 1 + 3 make E wall of cellar E wall of structure.

S220 E284 north of F73, east of F129, postholes / & pebbles.

Layer A: 10YR4/3 brown to dark brown silty loam.

1. contains few artifacts: ceramics (delft), glass, metal, bone, shell, pipestem, 18th cen.
2. "similar to M in adjacent units.

Layer B: 10YR5/8 yellowish brown silty loam

1. contains few artifacts: ceramics, glass, metal, bone, shell.
2. F163 & 164 exposed at base extending into subsoil.
3. subsoil below B in a low (cut down?) area. 10YR5/6 yellowish brown sterile silty clay.
4. "similar to B in units S219 E286, S221 E286

F163: 10YR5/8 yellowish brown silty loam.

1. squarish posthole, no mold visible. Measured 25x40x ~20cm
2. intrudes F164 in 164's SW corner.
3. Artifacts: very few, rusty nail + ab sherd, brick frags + flecks
4. Large brick pieces in NW corner, possible post location.
5. obviously post left no mark when pulled + filled w/ Layer B. - construction post in yard?

F164: 10YR5/8 yellowish brown silty loam.

1. square posthole 30x20x ~12cm.
2. Artifacts: 2 shell frag, 2 rusty nails.
3. ditto w/ 163.

S225 E290 + F368 - contained a plate - Edge of hypoth 2nd structure - some should be beneath, some out. Should see soil change. F368 definite post mold.

Layer A - 10YR 3/3 dark brown silt w/ wood + brick frags.
"Impressed from overburden soils."
(1) Topsoil - overlain by backfill.
(2) Artifacts = metal, bone, shell, eggshell (in NW corner of NW 1x1).
7, 11, 7, 5, 12 (3) Depths: 5-12 cm

Layer B - 10YR 4/3 med brn silty loam w/ moderate amt. of gravel mixed in compact in some areas.
(1) fill layer - should exhibit "under house gravel" spread.
(2) Artifacts: ceramics: delft, westerwald, porcelain, yellowware, creamware, glass, metal, bone, shell - 18th cen - mid 18th - mid 19th cen 1735-1830.
(3) B layer should be associated w/ structure (2nd), should be at edge of structure.
(4) F368 found in NW corner + small cluster brick rubble in SE quad. F368 at top of Layer B (?)

F368: 10YR 3/3 140 cm NS, 175 cm EW.
(1) large post hole w/ indistinct = pulled - post mold. "a cluster of brick rubble situated primarily in NW + W central portion of unit. Top of highest brick was seen top layer B. Feature base in Layer C.
(2) Artifacts: delft, pipestem frag, leadfrag, brick + brickbats, clinkers, glass frags including window + green bottle glass. →

F368 cont 2 cont. bone, westerwald, pipebowl frags, nails.

(3) large posthole, squarish hole, stepped mold containing brick rubble + Layer B materials. 10YR 4/2 dark gray brown silty clay loam w/ 10YR 5/4 yellowish brown silty clay loam. Base of mold = gradual change to 10YR 5/4 yellowish brown clay loam w/ brick rubble. Posthole = 10YR 5/6 yellowish brown clay loam w/ mottling of 10YR 3/2 very dark grayish brown brown silt loam & 10YR 5/4 yellowish brown clay loam = flecks + pockets of disintegrated charcoal, mortar, & flecks of brick. Sub = 10YR 5/6 to 5/8 yell. brn clay loam.

S221 E288 - fill w/in F129 fireplace hearth.

Layer B: 10YR 4/3 brown silty loam mottled w/ yellowish brown 10YR 5/4 silty loam, scattered pebble. 2-10cm deep.

(1) fill layer w/in fireplace "origins unclear"

(2) few scattered brick flecks, Artifacts: delft, pipestems, glass, metal, bone, shell, pipestems, "debitage" no mortar or plaster. 1690's-1750's

(3) one postmold at base of B. B should be fireplace hearth fill altered by fire → F223.

Layer C: 10YR 4/4 dark yellowish brown silty clay loam mottled w/ 10YR 4/3 brown silty loam w/ brick flecks.

(1) fill w/in hearth, undulating on top, flat base.

(2) Artifacts: Many, Ceramics = delft, glass, metal, bone, shell, pipestems. 1690-1750.

(3) Like C w/in F129.

INSIDE HEARTH!!

F129 M = builders trench fill. 10YR3/3 dark brown
10YR 3/4 & 4/4 dark yellowish brown &
10YR 6/6 brownish yellow clay loam. 10-16cm N/S, 55cm E-W.

(1) Fill of "builders trench" or is it robbers trench?
If robbers trench then fill would be hearth fill.
If builders trench.

(2) Artifacts, none — but chunks of brick, mortar, charcoal & burnt oyster shell.

(3) "cut into fill covering F73.??" same as surrounding fill.

(4) Depth: 8cm

S221 E290 — under structure w/ small silts!

Layer A: 10YR3/2 very dark grayish brown silty loam.

(1) 5-10cm deep - topsoil

(2) Artifacts: glass, metal, bone, kaolin pipestem.

Layer B: 10YR4/3 brown/dark brown clayey silt w/ intermixed pebbles. Fill layer (NOT new base of old yard surface as hypothesized.) Large #'s of pebbles.

(1) 4-10cm deep.

(2) Artifacts: Ceramics = redware, British brown (salt glazed stoneware), delft, stoneware, creamware, glass, metal, bone, shell, gray (French) gunflints, kaolin pipestem. ca. 1725-1760. (size of sherds?)

(3) F326 appears top of Layer C = F326 = rect. stain w/ 10YR 5/4 yellowish brown fine silt.

Layer C: 10YR4/4 dark yellowish brown fine silt, scattered pulverized brick frags.

(1) 9-22cm deep →

Layer C unit S221E29D

(2) Artifacts: few: porcelain, glass, metal, bone, shell, pipestem.

(3) Overlies Layer D - (sub & art drop off as reach) 10YR 5/4 yellowish brown clayey silt.
