① clarify research questions

- a. Area I — excavation of the well — research questions
integrity of well
information to get out
- b. Area II — how would mitigation address a research question
 - is integrity nullified by erosion
 - [horizontal + vertical separation of materials]
- c. Area III — significance of the feature —
what we hope to find + how it relates to N.R. quality
- d. Area IV — what would this again tell us about the Manor
 - what about the prehistoric component — its significance + research potential
 - what exactly was found — pear tree —
- e. Area V — ice house —

need to demonstrate what will be found —
