(For check-listing features, burials, photographs, artifacts, etc.)

9 Jul 71

Number	Date	Excavator	Provenience	Description
Test 2			3 x 3'	
	This may all be rubble fill.			
Layer 1 - upper 8" is gray soil containing charcoal specks and a few artifacts and brick specks.				
Layer 2 - next 10-11" is tan soil with charcoal & brick specks and a few artifacts and boulders and cobbles. - This is N. wall				
Layer 3 - On W wall the lower 4-5" is gray (like layer 1 or even a little darker. This also has char & brick specks. It appears to intrude into the tan layer near N edge of W wall. Has boulders like layer 2. S wall like W wall E wall like N wall				
Layer 4 - Orange clay grading into orange clay and gravel and boulders. Layer 3 intrudes into layer 2 on N wall. - very sharp break - has to be dug with layer 2 on N and E walls; less distinct break between layers 3 & 4 on W and S walls.				
Transit on NW corner of square (sq. oriented N-S)

General notes

Number	Date	Excavator	Provenience	Description

Opened trench 5 x 30 ft. across south end of east barracks intersecting side walls at right angle. Sides of trench are 2" inside 5-ft. boundary. Lettered squares 5' x 5' A to F beginning at west end of trench. Began with trench 20" ~~ft.~~ wide at west end of square A. Much midden (mostly small brick, but mortar, and a few nails and glass) in black soil (stratum 1) for 4 inches; then brown soil (stratum 2) for ca. 1-4 inches containing many rocks, bats, and many more artifacts. Under this is an ~~very~~ irregular layer of yellowish-orange clay (stratum 3) that appears burned — it also contains midden (brick specks and mortar) — in one place it seems thin (ca 1/4") overlying more yellowish orange midden. Strata 1 & 2 removed pretty much together, but 2 artifacts from strata 1 sorted out — rest of square A dug by strata.
