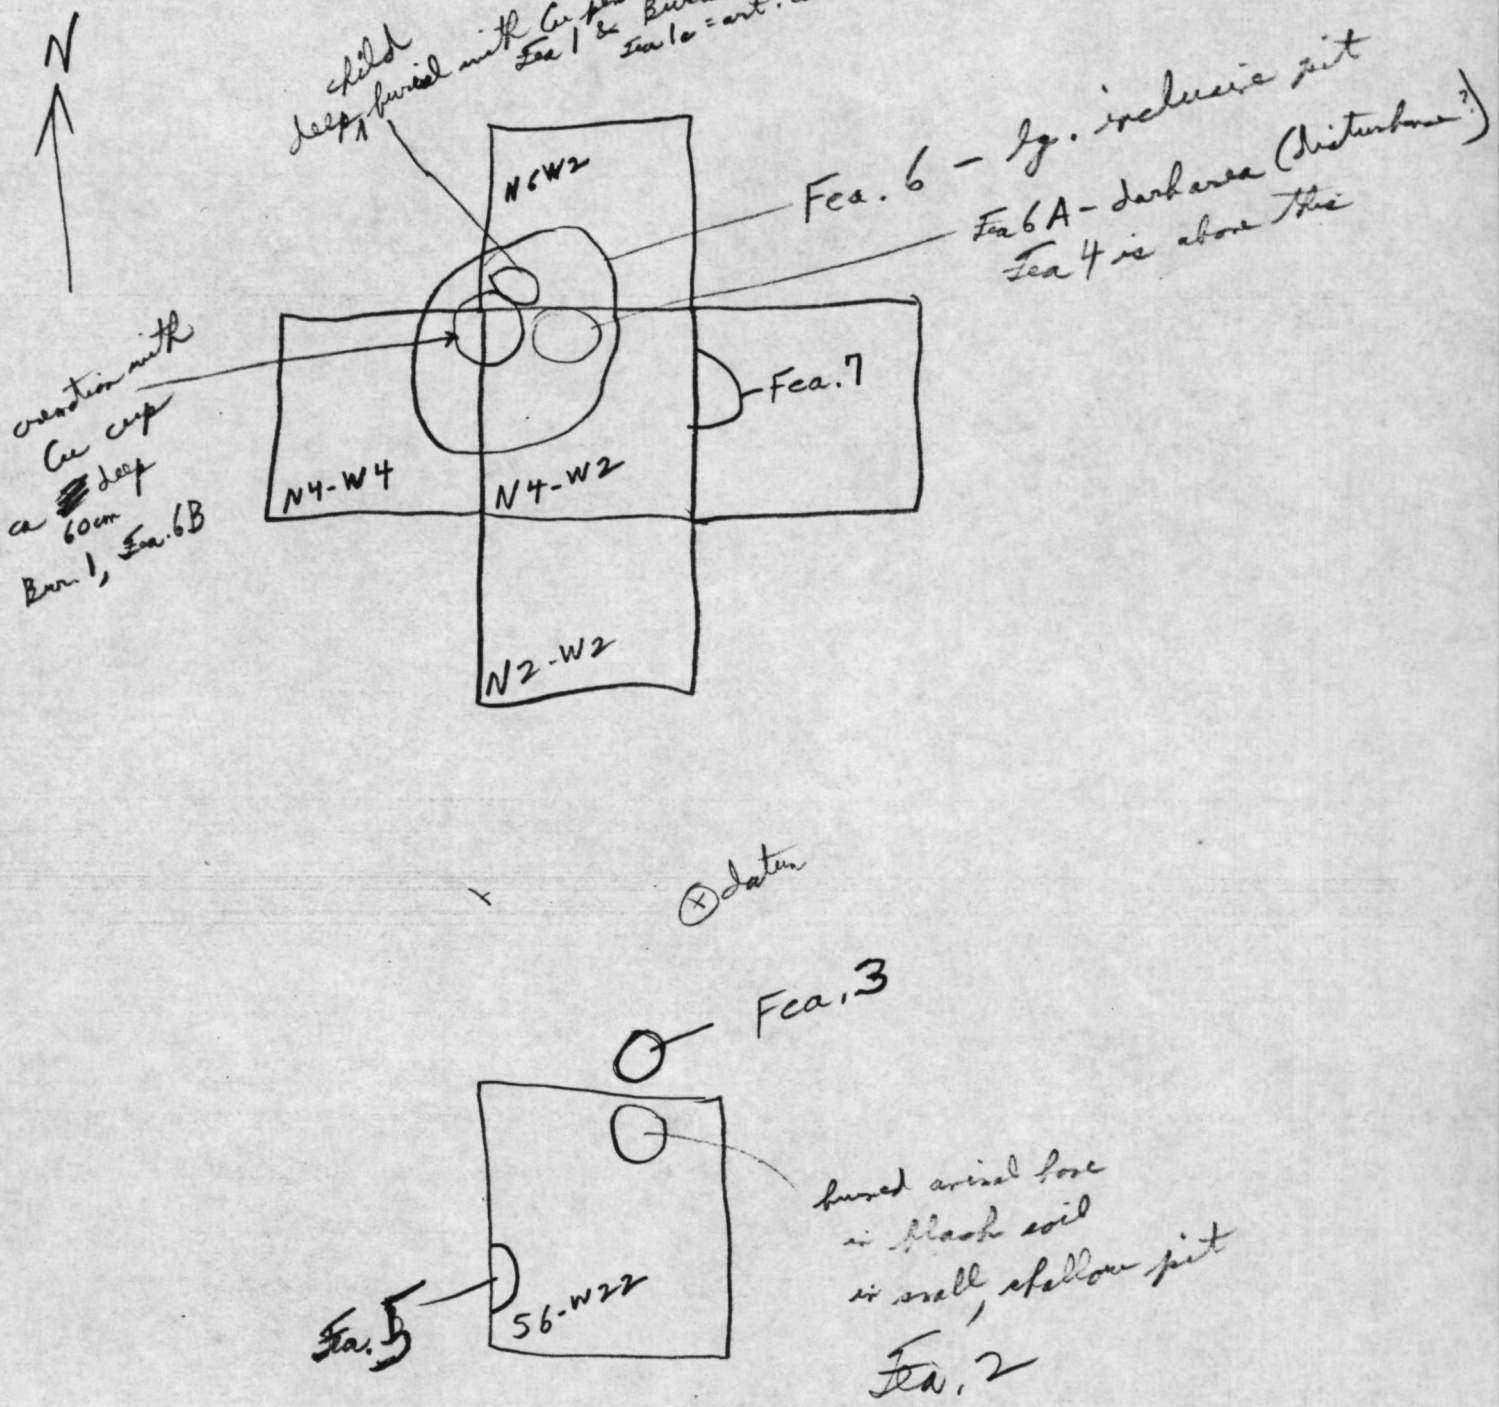
[Nassawango cu is 99.62 cu by weight per analysis obtained by R. Thomas].

(Fea. 1 includes Burs. 2 & 3 & Feas. 1a & 1b) all in N6W2



Jean Hessick
28 Apr 73

Nassarango Creek site

Have taken north square down to 50 cm below surface and encountered Cu necklace and much red ochre. Possible burial under necklace. ~~[illegible]~~ Drew south wall of square, will do others and photo. Have opened square to SW (now deep?) and encountered more red ochre, and a ~~[illegible]~~ copper paint cup.

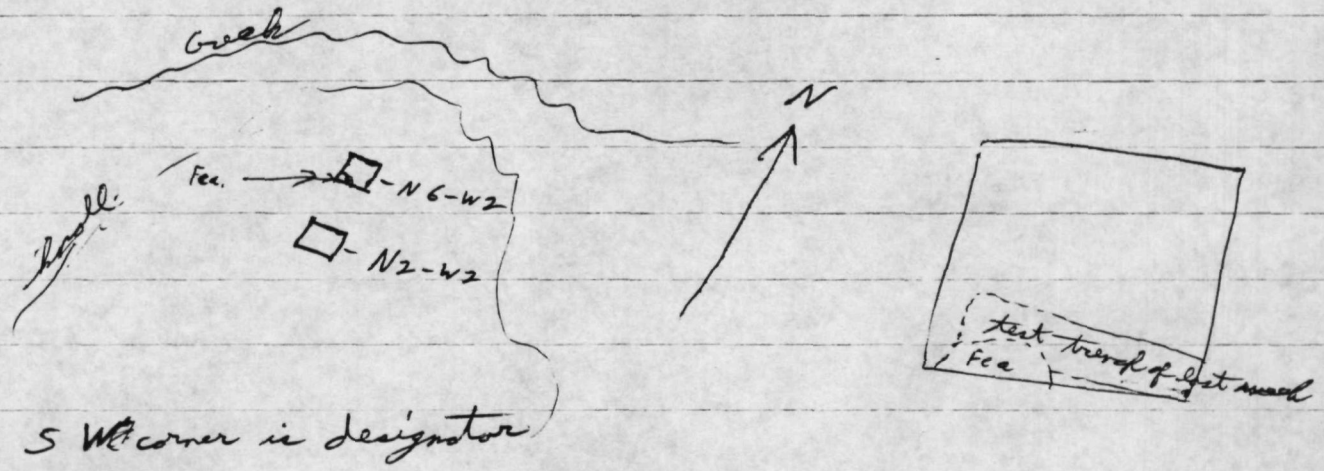
~~[illegible]~~

Also started a fourth square south of first two squares and encountered immediately a dark stain with ~~[illegible]~~ small fragments of burned and unburned bone.

Plans of owner still uncertain; Grant Powell to talk to him.

18 WO 23
Tassemago Creek site
1 Apr 73

When I arrived ca. 1 PM they were working 2 2-meter squares which Ron Thomas, who had arrived ca 9 A.M. had helped them put out. Grant Powell has 0-0 stake tied into bridge over creek.



took out in N6-W2 : { Level 1 0-10 cm below surface
many beads of Cu. { Level 2 10-20 " " "

This sq. has bone, sherds, beads of cu, and many small flakes
Took nothing in bottom of level 1, but no clear pit outline.

" " " N2-W2 : Level 1 - 0-20 cm " "

sh. as N6-W2 but art. less in quantity " 2 — 20-30 " " "
" 3 — 30-40 " " "
on bed of Cu

Bottom of level 1 showed some slight mottling, bottom of level 2 mostly clear.

Took fill out of test trench in N6-W2 and saw very back soil and small bone frags in place. Many beads in trench back-fill.

Nassawango Creek Site

Worcester County

28 Sept 73 Fri. — Cara called to report that John Sprinkle said there was much vandalism in the form of small test holes all over site, so Cara planned to spend the weekend of 6-8 Oct salvaging two hot spots reported by Sprinkle but not yet encountered by pot hunters.

28 Sep 73 Fri. — Called Grant Powell he reported site near Shad Landing and blocking Nassawango Creek rd. Called Mary

30 Sep 73 Sun. — Called Mary — no sign of any considerable disturbance,

4 Oct 73 Thur. Called Mary Lowry. They had monthly Chapt. meeting earlier that week. Earlier in week she and Jean blocked entrance with limbs and set ~~the~~ pot-hunters screen there and took shovel that was Jean's. Thur evening (today) before meeting Mary visited site, found limbs & screen gone; 2 large holes with no backdirt and truck tracks leading to them.

5 Oct 73 Fri Called Cara Wise — has not heard from John Sprinkle today, but plans to go down and take out both features.

Called John Sprinkle, who had just called Cara; digging continued early in week by vandals; holes seen by Mary were borrow pits for sand.

Called Mary.

8 Oct 73 Sun. Called Mary & talked to Dr. Lowry who said stains turned out to be only shallow deposits of red ochre with no artifacts or bones. He attributed the metal detector reaction to the iron in the ochre.
